Elizabeth B. Pinson shares with us her memories of Alaska's emergence into a new and modern era, bearing witness to history in the early twentieth century as she recalls it. She draws us into her world as a young girl of mixed ethnicity, with a mother whose Eskimo family had resided on the Seward Peninsula for generations and a father of German heritage. Growing up in and near the tiny village of Teller on the Bering Strait, Elizabeth at the age of six, despite a harrowing, long midwinter sled ride to rescue her, lost both her legs to frostbite when her grandparents, with whom she was spending the winter in their traditional Eskimo home, died in the 1918 influenza epidemic. Fitted with artificial legs financed by an eastern benefactor, Elizabeth kept journals of her struggles, triumphs, and adventures, recording her impressions of the changing world around her and experiences with the motley characters she met. These included Roald Amundsen, whose dirigible landed in Teller after crossing the Arctic Circle; the ill-fated 1921 British colonists of Wrangel Island in the Arctic; trading ship captains and crews; prospectors; doomed aviators; and native reindeer herders. Elizabeth moved on to boarding school, marriage, and the state of Washington, where she compiled her records into this memoir and where she lived until her death in 2006.

snowblowers, machines powered by small gas engines have become a permanent—and loud—fixture in American culture. But fifty years of high-speed fun and pristine lawns have not come without cost. In the first comprehensive history of the small-bore engine and the technology it powers, Paul R. Josephson explores the political, environmental, and public health issues surrounding one of America's most dangerous pastimes. Each chapter tells the story of an ecosystem within the United States and the devices that wreak havoc on it—personal watercraft (PWCs) on inland lakes and rivers; all-terrain vehicles (ATVs) in deserts and forests; lawn mowers and leaf blowers in suburbia. In addition to environmental impacts, Josephson discusses the development and promotion of these technologies, the legal and regulatory efforts made to improve their safety and environmental soundness, and the role of owners' clubs in encouraging responsible operation. Synthesizing information from medical journals, recent environmental research, nongovernmental organizations, and manufacturers, Josephson's compelling history leads to one irrefutable conclusion: these machines cannot be operated without loss of life and loss of habitat.

sailing craft Trailer sailers--the smallest, most economical sailboats with sleeping accommodations--are a popular platform for learning the basics of sailing and are often considered to be the entry level to cruising under sail. Author Brian Gilbert shows how trailer sailers can be the ideal craft for a lifetime of enjoyment, including serious, long-distance cruising. This book covers all the bases, including how to inspect, buy, and equip a boat; how to trailer, sail, navigate, and cruise in small boats; how to use communications and navigation equipment; and more.

* Outboard motor repair for the average guy * Fix up an old outboard and SAVE \$1000 or more compared to buying a new motor! With a little know-how and a few common tools, you can fix an old motor—bring it back from the dead. Sometimes all it takes is a squirt of WD-40 into the cylinder and a new spark plug. Or a new set of points and condensers—which do not require expert knowledge or black magic to install. Maybe the carburetor needs cleaning and adjusting. You can do it! Max E. Wawrzyniak III is an outboard motor guru. He advises you to find an old motor at a yard sale for \$100 or so (and he tells you exactly which ones to look for), and fix it up—rather than spending \$1500 or more on a new motor. He is a big fan of “cheap power.” Get on the water with money left in your pocket. With a basic understanding of how these motors work, a little logical thinking, and a few hours’ work, you can go boating for a fraction of what
