[] it didn't matter, because one word, "sure" in the context of motorcycle ownership, gave Pete permission to buy one. All he had to do now was earn the money. [] When Ms. Strickland answered the door she looked at the stoop and noticed that it had been shoveled. Since they were both holding shovels, the first thing she said in a rhetorical tone was "Did you guys do that? Thank you!" Before they could get a word out, she continued with "I guess you are here to shovel my drive! Or did you do that too and now you want your money?" Without missing a beat, Mel replied, "Yup! Twenty bucks!" In a scolding almost frantic tone she replied with, "Well I'm not paying. I have the lawn service under contract. Not very smart business boys. You can't just ask people to pay for a service they didn't request!" Pete just stood there in shock when Mel said, "OK, we'll put it back." She

paused for a moment with a look of horror on her face until she realized Mel was joking and started laughing. She said "I'm sorry boys, but I'm already committed." Mel replied, "That's OK, we understand." As they were walking toward the next house, they heard Ms. Strickland's door open and she started yelling, "Boys!? Boys!?! Wait!" Mel and Pete exchanged glances wondering what now? "Come back! I changed my mind! You can shovel my drive!" Pete jokingly said to Mel, "It looks like we're both gonna make \$20 on this drive since our price just doubled!"

Plants are endowed with innate immune system, which acts as a surveillance system against possible attack by pathogens. Plant innate immune systems have high potential to fight against viral, bacterial, oomycete and fungal pathogens and protect the crop plants against wide range of diseases. However, the innate

immune system is a sleeping system in unstressed healthy plants. Fast and strong activation of the plant immune responses aids the host plants to win the war against the pathogens. Plant hormone signaling systems including salicylate (SA), jasmonate (JA), ethylene (ET), abscisic acid (ABA), auxins, cytokinins, gibberellins and brassinosteroids signaling systems play a key role in activation of the sleeping immune systems. Suppression or induction of specific hormone signaling systems may result in disease development or disease resistance. Specific signaling pathway has to be activated to confer resistance against specific pathogen in a particular host. Two forms of induced resistance, systemic acquired resistance (SAR) and induced systemic resistance (ISR), have been recognized based on the induction of specific hormone signaling systems. Specific hormone signaling system determines the outcome of plant-pathogen interactions, culminating in disease development or disease resistance. Susceptibility or resistance against a particular pathogen is determined by the action of the signaling network. The disease outcome is often determined by complex network of interactions among multiple hormone signaling pathways. Manipulation of the complex hormone signaling systems and fine tuning the hormone signaling events would help in management of various crop diseases. The purpose of the book is to critically examine the potential methods to manipulate the multiple plant hormone signaling systems to aid the host plants to win the battle against pathogens.

Designed as Kawasaki's response to the ground-breaking Honda CB750 of 1969, the Kawasaki 900 Super 4 Model Z1, affectionately referred to by many as the 'Z1000', appeared in 1972. It took the motorcycling world by storm and has a strong claim to be the world's first true ultimate superbike. Thirty years on, the (K)Z1000 Z1-R has emerged as one of Kawasaki's most desirable and sought after collectables from the 1970s. This book will help the reader appreciate the ever-evolving Japanese motorcycle styling and the introduction of various technologies as standard equipment, and just how sensational and unique these motorbikes really were.

Biocomposites, formed by a matrix and a reinforcement of natural fibers, often mimic the structure of living materials and offer the strength of the matrix as well as biocompatibility. Being renewable, cheap, recyclable, and biodegradable, they have witnessed rapidly growing interest in terms of industrial and fundamental applications. This book focuses on fiber-based composites applied to biomedical and environmental applications. It presents a comprehensive survey of biocomposites from the existing literature, paying particular attention to various biomedical and environmental applications. The text describes mechanical designs and manufacturing aspects of various fibrous polymer matrix composites and presents examples of the synthesis and development of bionanocomposites and their applications. The book is the first of its kind to present all these topics together unlike most other books on nano-/biocomposites that are generally limited to their fundamentals, different methods of synthesis, and applications.
