Educators worldwide claim that as their pupils learn to control their emotional behaviour their learning improves drastically. Since 2005 the DCSF in the UK has been recommending that all primary schools incorporate emotional intelligence into all lessons. The SEAL approach has also been implemented in secondary schools making emotional literacy a key topic for all teachers. This book tackles the main issues and shows teachers exactly how they can use emotional intelligence to make a real difference to their student's literacy and overall learning abilities.

J. M. Adovasio has spent the last thirty years at the center of one of our most fiery scientific debates: Who were the first humans in the Americas, and how and when did they get there? At its heart, *The First Americans* is the story of the revolution in thinking that Adovasio and his fellow archaeologists have brought about, and the firestorm it has ignited. As he writes, "The work of lifetimes has been put at risk, reputations have been damaged, an astounding amount of silliness and even profound stupidity has been taken as serious thought, and always lurking in the background of all the argumentation and gnashing of tenets has been the question of whether the field of archaeology can ever be pursued as a science."

A Touch of Truth

Here is a powerful testimony of God's ability to turn around even the most desperate of lives. Going from violent drug addict, prisoner and a thief to a bike-riding, God-filled evangelist, Steve Amos was miraculously taken from the pit of hell. Only a near-death experience convinced him that God was real. 'From the Pit of Hell' tells the true story of a man addicted to drugs, of a God who saved and transformed this life, and continues to change and transform lives today. This book is for teenagers, youth leaders and those who have lost their way. It is also a very helpful resource for those working with youth offenders, with a tremendous impact in prisons and drug rehabilitation centres.

Information is essential to all human activity, and information in electronic form both amplifies and augments human information interactions. Surveys some of the different classical meanings of information, focuses on the ways that electronic technologies are affecting how we think about these senses of information, and introduces an emerging sense of information that has implications for how we work, play, and interact with others. The four senses selected for inclusion here are the following: thought and memory, communication process, artifact, and energy. Emphasizes how electronic representations have blurred media boundaries and added computational behaviors that yield new forms of information interaction, which, in turn, are stored, aggregated, and mined to create profiles that represent our cyber identities.

Suspension is probably the most misunderstood

aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.
