Science Instruction in the Middle and Secondary Schools

The Education Index

Descriptions of model environmental education projects that were funded by the Environmental Education Grant Program in California from 1983 through 1991. Projects were selected for grants by fitting specific environmental education criteria. The programs encourage efforts and innovations at the school district level to help students learn about their interrelationships with the natural and human environment, practice making decisions which

enhance the quality of life and learn to conserve energy and other natural resources. Emphasis is placed on partnerships with local community resources and rethinking science curriculums. Grant projects were also encouraged to restructure curriculum to integrate learning across disciplines and ages. Projects are clearly coded with the environmental concepts emphasized, and include a description of the project, the grades appropriate for the activities, the year the grant was used and school contact information. Projects are designed for a range of ages, from kindergarten through high school.

Catholic School Journal

Revised List of Books and Prices Issued by the Superintendent of Public Instruction, 1917, in Accordance with the Provisions of the Law Regulating the Sale of School Text-books in Michigan

The New Mexico School Review

ERIC Educational Documents Index, 1966-1969: Major descriptors

Science Education

North Carolina Public Schools

America's Lab Report

This science methods textbook is designed to prepare middle and high school science teachers to help students become scientifically and technologically literate by first helping them understand the elements of science reform and then supporting their efforts. Features new to the fifth edition include: Open cases and vignettes that illustrate how science teachers help students construct their own understanding "Stop and Reflect" exercises throughout each chapter to help readers contextualize and reflect upon what was read Expanded coverage of teaching students with special needs and equity in science teaching and learning Discussion of a variety of alternative and authentic assessment methods

Bibliographic Guide to Education

Laboratory experiences as a part of most U.S. high school science curricula have been taken for granted

for decades, but they have rarely been carefully examined. What do they contribute to science learning? What can they contribute to science learning? What is the current status of labs in our nation's high schools as a context for learning science? This book looks at a range of questions about how laboratory experiences fit into U.S. high schools: What is effective laboratory teaching? What does research tell us about learning in high school science labs? How should student learning in laboratory experiences be assessed? Do all students have access to laboratory experiences? What changes need to be made to improve laboratory experiences for high school students? How can school organization contribute to effective laboratory teaching? With increased attention to the U.S. education system and student outcomes, no part of the high school curriculum should escape scrutiny. This timely book investigates factors that influence a high school laboratory experience, looking closely at what currently takes place and what the goals of those experiences are and should be. Science educators, school administrators, policy makers, and parents will all benefit from a better understanding of the need for laboratory experiences to be an integral part of the science curriculum and how that can be accomplished.

Greatest Hits of Environmental Education

The American Educational Catalog

New edition of a text for preservice and inservice teachers. Covers background for science teaching; teaching strategies and classroom management; planning for instruction; assessment; and professional development. Annotation copyright Book News, Inc. Portland, Or.
