Everything You Need to Ace Science in One Big Fat Notebook

Savage Earth

This is a re-publication of Katherine B. Shippen's 1955 book, which is a history of the study of biology, from Aristotle to Thomas Hunt Morgan. Each chapter is about a different scientist or theory. The book is aimed at middle school science students.

DK Guides: Savage Earth provides a remarkable account of our planet's structure and the literally Earth-shattering process that shaped it -- often with savage consequences for human being and other living things. Lavishly and spectacularly illustrated, with many unusual views of the Earth and its features, Savage Earth offers a comprehensive approach to understanding the making and shaping of planet Earth. Take a dramatic journey across the planet with

Savage Earth.

Concepts and Challenges in Earth Science

A 2008 Newbery Honor Book In this Newbery Honor-winning novel, Gary D. Schmidt offers an unforgettable antihero. *The Wednesday Wars* is a wonderfully witty and compelling story about a teenage boy's mishaps and adventures over the course of the 1967–68 school year in Long Island, New York. Meet Holling Hoodhood, a seventh-grader at Camillo Junior High, who must spend Wednesday afternoons with his teacher, Mrs. Baker, while the rest of the class has religious instruction. Mrs. Baker doesn't like Holling—he's sure of it. Why else would she make him read the plays of William Shakespeare outside class? But everyone has bigger things to worry about, like Vietnam. His father wants Holling and his sister to be on their best behavior: the success of his business depends on it. But how can Holling stay out of trouble when he has so much to contend with? A bully demanding cream puffs; angry rats; and a baseball hero signing autographs the very same night Holling has to appear in a play in yellow tights! As fate sneaks up on him again and again, Holling finds Motivation—the Big M—in the most unexpected places and musters up the courage to embrace his destiny, in spite of himself.

The New York Times bestseller *A Long Walk to Water* begins as two stories, told in alternating sections, about two eleven-year-olds in Sudan, a girl in 2008 and a boy in 1985. The girl, Nya, is fetching water from a pond that is two hours' walk from her home: she makes two trips to the pond every day. The boy, Salva, becomes one of the "lost boys" of Sudan,

refugees who cover the African continent on foot as they search for their families and for a safe place to stay. Enduring every hardship from loneliness to attack by armed rebels to contact with killer lions and crocodiles, Salva is a survivor, and his story goes on to intersect with Nya's in an astonishing and moving way.

Thirteen-year-old Rosie Beckett has never strayed further from her family's farm than a horse can pull a cart. Then a letter from her Aunt Euterpe arrives, and everything changes. It's 1893, the year of the World's Columbian Exposition-the "wonder of the age"-a.k.a. the Chicago World's Fair. Aunt Euterpe is inviting the Becketts to come for a visit and go to the fair! Award-winning author Richard Peck's fresh, realistic, and fun-filled writing truly brings the World's Fair-and Rosie and her family-to life.

Tintinalli's Emergency Medicine: A Comprehensive Study Guide, Seventh Edition

The inspiring memoir for young readers about a Latina rocket scientist whose early life was transformed by joining the Girl Scouts and who currently serves as CEO of the Girl Scouts of the USA. A meningitis outbreak in their underprivileged neighborhood left Sylvia Acevedo's family forever altered. As she struggled in the aftermath of loss, young Sylvia's life transformed when she joined the Brownies. The Girl Scouts taught her how to take control of her world and nourished her love of numbers and science. With new confidence, Sylvia navigated shifting cultural expectations at school and at home, forging her own trail to become one of the first Latinx to graduate with a master's in engineering from Stanford University and going on to become a rocket scientist at NASA's Jet Propulsion Laboratory. Simultaneously available in Spanish!

Read Book 7th Grade Weather Study Guide

As climate has warmed over recent years, a new pattern of more frequent and more intense weather events has unfolded across the globe. Climate models simulate such changes in extreme events, and some of the reasons for the changes are well understood. Warming increases the likelihood of extremely hot days and nights, favors increased atmospheric moisture that may result in more frequent heavy rainfall and snowfall, and leads to evaporation that can exacerbate droughts. Even with evidence of these broad trends, scientists cautioned in the past that individual weather events couldn't be attributed to climate change. Now, with advances in understanding the climate science behind extreme events and the science of extreme event attribution, such blanket statements may not be accurate. The relatively young science of extreme event attribution seeks to tease out the influence of human-cause climate change from other factors, such as natural sources of variability like El Niño, as contributors to individual extreme events. Event attribution can answer questions about how much climate change influenced the probability or intensity of a specific type of weather event. As event attribution capabilities improve, they could help inform choices about assessing and managing risk, and in guiding climate adaptation strategies. This report examines the current state of science of extreme weather attribution, and identifies ways to move the science forward to improve attribution capabilities.
