Doing a Literature Review

Frequently students confuse literature reviews with summaries of existing research, and they can easily get overwhelmed by the amount of material they have to consider and filter as part of their review. Likewise, they don't often realize that a considered, planned, structured and balanced argument forms the bedrock of a successful research project. Outlining what a literature review is - and isn't - and showcasing how to use the literature to your advantage to construct a strong academic argument, this Little Quick Fix answers important questions like:

- What is the purpose of a literature review?
- How can I tell the difference between an argument and an academic argument?
- What do I need to create my argument?
- What do I need from an article to support my argument?
- How do I create a counterargument?
- How can I make sure I'm creating a strong argument and plausible counterargument?
- How can I win my argument?

Students need help over hurdles at every stage of their research project. They want simple, powerful, accessible tools that deliver results fast. They need to meet interim assessment deadlines and prove that they have successfully passed through multiple stages of their project, or need to master a stage of understanding in a learning cascade before

they can proceed to the next week in their methods module. Their supervisors are increasingly unable to help, but will still be assessing results. Students need more than YouTube. Titles in the Little Quick Fix series offer:

- Visual, design-led learning
- Clear, structured, useful pedagogy
- A hand-holding, step-by-step approach for students who are less able, or less academically prepared by school so far
- Effective self-directed learning with DIY progress tracking
- A stand-in for the busy/unavailable supervisor

Conducting Research Literature Reviews

Many students find literature reviews fiendishly difficult to write. That is because the literature review -- a paper summarizing a body of published works on a given topic -- requires the writer to abandon almost everything they've learned about writing and to use a brand new tone and approach. This booklet explains everything the writer needs to generate a successful literature review in step-by-step fashion. By focusing on tone and organization and showing the writer how to use a grid system to develop the paper, this booklet will turn a difficult project into a finished one.

Table of Contents - How to Use This Booklet - What Is a Literature Review? - Step One: Understand the Assignment - A Preliminary Word About Tone - Step Two: Organize the Material - Step Three: Create Topic Sentences - Step Four: Complete the Paragraphs - Step Five: The First Paragraph - Step Six: Thesis and Tone - Step Seven: The Last Paragraph - Step Eight: The Final Check Here's what students have said about this method: "The grid made a big job seem really

A Literature Review

Imagine, if you can, the world in the year 2100. In *Physics of the Future*, Michio Kaku—the New York Times bestselling author of *Physics of the Impossible*—gives us a stunning, provocative, and exhilarating vision of the coming century based on interviews with over three hundred of the world's top

scientists who are already inventing the future in their labs. The result is the most authoritative and scientifically accurate description of the revolutionary developments taking place in medicine, computers, artificial intelligence, nanotechnology, energy production, and astronautics. In all likelihood, by 2100 we will control computers via tiny brain sensors and, like magicians, move objects around with the power of our minds. Artificial intelligence will be dispersed throughout the environment, and Internet-enabled contact lenses will allow us to access the world's information base or conjure up any image we desire in the blink of an eye. Meanwhile, cars will drive themselves using GPS, and if room-temperature superconductors are discovered, vehicles will effortlessly fly on a cushion of air, coasting on powerful magnetic fields and ushering in the age of magnetism. Using molecular medicine, scientists will be able to grow almost every organ of the body and cure genetic diseases. Millions of tiny DNA sensors and nanoparticles patrolling our blood cells will silently scan our bodies for the first sign of illness, while rapid advances in genetic research will enable us to slow down or maybe even reverse the aging process, allowing human life spans to increase dramatically. In space, radically new ships—needle-sized vessels using laser propulsion—could replace the expensive chemical rockets of today and perhaps visit nearby stars. Advances in nanotechnology may lead to the fabled space elevator, which would propel humans hundreds of miles above the earth's atmosphere at the push of a button. But these astonishing revelations are only the tip of the iceberg. Kaku also discusses emotional robots, antimatter

rockets, X-ray vision, and the ability to create new life-forms, and he considers the development of the world economy. He addresses the key questions: Who are the winner and losers of the future? Who will have jobs, and which nations will prosper? All the while, Kaku illuminates the rigorous scientific principles, examining the rate at which certain technologies are likely to mature, how far they can advance, and what their ultimate limitations and hazards are.

Synthesizing a vast amount of information to construct an exciting look at the years leading up to 2100, *Physics of the Future* is a thrilling, wondrous ride through the next 100 years of breathtaking scientific revolution.

Writing Literature Reviews

Wigeongrass (*Ruppia Maritima* L.)

Designing a research project is possibly the most difficult task a dissertation writer faces. It is fraught with uncertainty: what is the best subject? What is the best method? For every answer found, there are often multiple subsequent questions, so it's easy to get lost in theoretical debates and buried under a mountain of literature. This book looks at literature review in the process of research design, and how to develop a research practice that will build skills in reading and writing about research literature—skills that remain

valuable in both academic and professional careers. Literature review is approached as a process of engaging with the discourse of scholarly communities that will help graduate researchers refine, define, and express their own scholarly vision and voice. This orientation on research as an exploratory practice, rather than merely a series of predetermined steps in a systematic method, allows the researcher to deal with the uncertainties and changes that come with learning new ideas and new perspectives. The focus on the practical elements of research design makes this book an invaluable resource for graduate students writing dissertations. Practicing research allows room for experiment, error, and learning, ultimately helping graduate researchers use the literature effectively to build a solid scholarly foundation for their dissertation research project.
