Aside from trombiculid mites of the genus *Leptotrombidium*, the larval forms of which are the vectors of scrub typhus in South East Asia, mites only cause pathology as a consequence of direct host contact. Some have a cosmopolitan distribution whilst others have more restricted niches. Globally, the faeces of the house dust mite triggers several allergic conditions and profoundly itchy scabies

The fecal-oral route (also called the oral-fecal route or orofecal route) describes a particular route of transmission of a disease wherein pathogens in fecal particles pass from one person to the mouth of another person. Main causes of fecal-oral disease transmission include lack of adequate sanitation (leading to open defecation), and poor hygiene practices.

Alphavirus is a genus of RNA viruses, the sole genus in the *Togaviridae* family. Alphaviruses belong to group IV of the Baltimore classification of viruses, with a positive-sense, single-stranded RNA genome. There are 31 alphaviruses, which infect various vertebrates such as humans, rodents, fish, birds, and larger mammals such as horses, as well as invertebrates.

INTRODUCTION TO MEDICAL PARASITOLOGY

The main vectors described are mosquitoes, but other arthropods have been reported. Hepatitis E virus is an emerging food-borne virus in Croatia. After the emergence in 2012, cases were regularly recorded. Seropositivity varies greatly by region and population group. Rotaviruses represent a significant healthcare burden since rotavirus

Alphavirus - Wikipedia

Insects, and other arthropods like ticks (vectors) can transmit diseases and/or cause injury to cattle. Cattle Health works with partner agencies to identify, control, and eradicate vector-borne disease threats.

causing serious health problems. Ectoparasites are arthropods that either cause diseases, or act as vectors transmitting other parasites. Human evolution and parasitic infections have run hand in hand and most parasitic diseases and methods of their transmission have been discovered thousands of years ago. Environmental changes, human behavior
