### **Academic Assessment and Intervention**

As speech-language pathologists care for more clients from culturally and linguistically diverse (CLD) backgrounds, there is a growing need for strategies to provide successful and appropriate assessment and treatment. While no single source can cover every linguistic and cultural difference, this new text provides specific knowledge on the major cultural and linguistic groups an SLP may encounter, as well as best practices to assess and work effectively with any CLD student or adult. For practicing clinicians and speech-language pathology students alike, this is an excellent resource to help provide the most effective and appropriate services to all clients.

### **The SAGE Encyclopedia of Human Communication Sciences and Disorders**

Autism spectrum disorder has received increasing research in recent years, with more information on assessment and treatment than can be readily assimilated from primary literature by clinicians. *Clinical Assessment and Intervention for Autism Spectrum Disorders* summarizes evidence-based assessments and intervention for Autism across the life-span, providing clinicians with a practical overview of how best to assess and treat this disorder. The book begins with a discussion of what warrants a determination of being "evidence based" and a description of the disorder from a life span perspective. The book also provides a chapter on differential diagnosis of autism relative to other disorders. What follows are separate sections on assessment and intervention. These chapters discuss first

how to assess and then separately how to treat behavioral problems, communication and social skills issues, academic and vocational skills, and the use of pharmacology and an assessment of possible pharmacological effects. Intended for practitioners assessing and treating children with developmental delays, the book provides clinicians with best practices for assessing and treating delays associated with autism. Covers the full range of Autism Spectrum Disorders Covers the lifespan Focuses on evidence-based assessment and treatment

### **Achieving Communication Competence**

This book provides a broad range of practical information on the family as the context for communicative growth, and ways that families promote or constrain development of communication.

### **Family-centered Early Intervention for Communication Disorders**

Grounded in state-of-the-art research, this practical guide comprehensively shows how to harness the potential of direct behavior rating (DBR) as a tool for assessment, intervention, and communication in schools. DBR can be used rapidly and efficiently in PreK-12 classrooms to support positive behavior and promote self-management. The authors and contributors provide concrete examples of ways to implement DBR strategies within multi-tiered systems of support (MTSS). The evidence base supporting each strategy is reviewed. More than 30 reproducible checklists and forms include step-by-step implementation blueprints, daily report

### **Augmentative and Alternative Communication Intervention**

This book examines the typical pattern of communication development in children and adolescents to enable primary care physicians as well as other clinicians, therapists, and practitioners to assist parents in making informed decisions based on current research. It offers an overview of communication disorders in children and adolescents that typically present before adulthood. The book describes current assessment, diagnostic procedures, and evidence-based interventions. Chapters outline the standard course of speech milestones and ages to begin screening for deficits and their risk factors. Subsequent chapters review best practices for every aspect of treatment, including care planning, discussing disorders and interventions with parents, making referrals, and collaborating with other providers. The book also discusses evidence-based interventions for specific disorder types such as language impairment, stuttering, language disabilities, and hearing impairment. In addition, the book offers guidance on how to speak about care planning as well as quality of life issues related to communication disorders with other caregivers and parents. Featured topics include: Screening and identification procedures of communication disorders. Key elements to providing family-centered care. Common causes, assessment, and treatment of specific

language impairment (SLI) in children. Hearing loss and its impact on the development of communication in children. Attention deficit/hyperactivity disorder (ADHD) and the role of attention in the development of language in children. Communication development in children with autism spectrum disorder (ASD). The Clinical Guide to Assessment and Treatment of Communication Disorders is a must-have resource for clinicians and related professionals, researchers and professors, and graduate students in the fields of child, school, and developmental psychology, pediatrics and social work, child and adolescent psychiatry, primary care medicine, and related disciplines.

### **Achieving Communication Independence**

This text provides a comprehensive discussion of language disorders and clinical practice that takes students from model, through disorders, to assessment and intervention, with an emphasis on classroom application. "Language Disorders" takes a functional, environmental, and conversational approach, by using the child's natural environment and conversational partners. Unlike other language disorders texts, which have a disorder-specific focus, this text takes a logical traverse from assessment through intervention. This new edition is completely updated with current trends and developments in the field, and is full of practical ideas and useful suggestions for students and speech-language pathologists. The text provides concrete guidelines and procedures for the assessment and training

### **Communication-based Intervention for Problem Behavior**

Autism is a word most of us are familiar with. But do we really know what it means? Children with autism are challenged by the most essential human behaviors. They have difficulty interacting with other people-often failing to see people as people rather than simply objects in their environment. They cannot easily communicate ideas and feelings, have great trouble imagining what others think or feel, and in some cases spend their lives speechless. They frequently find it hard to make friends or even bond with family members. Their behavior can seem bizarre. Education is the primary form of treatment for this mysterious

condition. This means that we place important responsibilities on schools, teachers and children's parents, as well as the other professionals who work with children with autism. With the passage of the Individuals with Disabilities Education Act of 1975, we accepted responsibility for educating children who face special challenges like autism. While we have since amassed a substantial body of research, researchers have not adequately communicated with one another, and their findings have not been integrated into a proven curriculum. Educating Children with Autism outlines an interdisciplinary approach to education for children with autism. The committee explores what makes education effective for the child with autism and identifies specific characteristics of programs that work. Recommendations are offered for choosing educational content and strategies, introducing interaction with other children, and other key areas. This book examines some fundamental issues, including: How children's specific diagnoses should affect educational assessment and planning How we can support the families of children with autism Features of effective instructional and comprehensive programs and strategies How we can better prepare teachers, school staffs, professionals, and parents to educate children with autism What policies at the federal, state, and local levels will best ensure appropriate education, examining strategies and resources needed to address the rights of children with autism to appropriate education. Children with autism present educators with one of their most difficult challenges. Through a comprehensive examination of the scientific knowledge underlying educational practices,

## **Communication Intervention**

The focus of this book is on speech production and speech processing associated with cleft palate, covering phonetic (perceptual and instrumental), phonological and psycholinguistic perspectives, and including coverage of implications for literacy and education, as well as cross-linguistic differences. It draws together a group of international experts in the fields of cleft lip and palate and speech science to provide an up-to-date and in-depth account of the nature of speech production, and the processes and current evidence base of assessment and intervention for speech associated with cleft palate. The consequences of speech disorders associated with cleft on intelligibility and communicative participation are also covered. This book will provide a solid theoretical foundation and a valuable clinical resource for students of speech-language pathology, for practising speech-language pathologists, and for others interested in speech production in cleft palate, including researchers and members of multi-disciplinary cleft teams who wish to know more about the nature of speech difficulties associated with a cleft palate.

that scientific evidence, rather than biases or previous practice, must determine assessment practices that are selected and used for particular purposes. Similar to a handbook in its comprehensive topical coverage, this edited collection provides a contextual foundation for academic assessment and intervention; describes both norm-referenced and curriculum-based assessment/measurement in detail; considers the implications of both of these assessments on ethnically diverse populations; provides a clear link between assessment, evidence-based interventions and the RTI model; and considers other important topics related to this area such as teacher behavior. Intended primarily for graduate-level courses in education, school psychology, or child clinical psychology, it will also be of interest to practicing professionals in these fields.

Person-centered care for persons with dementia has been developed and expanded over the last few decades. Speech-language pathologists are uniquely positioned to understand the striking impact that communication challenges have on persons with dementia and their caregivers, and can lead the charge to improve access to communication and participation. This volume serves as a starting point and reference manual for those who want to provide person-centered and life-enhancing services to persons with dementia, and to inspire the continued generation of quality research to demonstrate the value of cognitive-communication, behavioral, and caregiver interventions. It serves as a call to action for an interprofessional team of healthcare providers across healthcare settings to promote meaningful life engagement in persons with dementia using evidence-based assessment and intervention approaches. This volume provides background on the evolution of caring for persons with dementia, as well as a description of the diagnostic process for dementia syndromes and the cognitive and communication characteristics of dementias with an emphasis on Alzheimer's dementia. Its chapters cover the person-centered assessment process for persons with cognitive and communicative disorders of dementias; intervention approaches for the wide variety of cognitive, communicative, eating/swallowing, and behavioral symptoms and consequences of dementia syndromes; reimbursement and documentation issues for various settings in which persons with dementia are seen; and issues and challenges of quality of life and end-of-life care.

Augmentative and Alternative Communication Intervention: An Intensive, Immersive, Socially Based Delivery Model is ideal for school-based speech-language pathologists (SLPs) and an excellent resource for interventionists (special education teachers, ABA therapists) and SLPs working in other settings who wish to develop an intensive, immersive Augmentative and Alternative Communication (AAC)-based intervention through a three-phase intervention process: assessment, intervention planning, and intervention implementation. Written by an SLP who has worked in a public school setting and saw to the application of theory to practice, the text provides detailed information regarding working with children who have complex communication needs and the background knowledge necessary for successful implementation of the intervention approach. Included are considerations for vocabulary selection for the beginning communicator, how to create a symbolically rich environment, detailed intervention approaches, and progress monitoring strategies that establish appropriate, measurable goals. AAC will no longer be an alternative means of communication but a best practice means of teaching communication in the SLP's or interventionist's repertoire. Making the leap from the theoretical to the practical, this essential book: Describes the intervention needs of children with complex communication needs and the limitations of current approaches (e.g., PECS, Milieu Training, Functional Communication Training). Operationally defines the goal of AAC intervention, discussing its complexities, including the limitations of a pull-out model. Introduces

the Intensive, Immersive, Socially Based Approach to Intervention and briefly describes each phase of the intervention process. Discusses how AAC assessments differ from traditional assessments of speech and language skills, as well as provides an overview of different assessment models and their contribution to the intervention process. Examines the importance of training support staff to key components of this intervention model. Contains information on the application of language-based intervention strategies to AAC. Talks about the importance of progress monitoring and how to use functional communication measures and communication sampling, a new and innovative technique developed by the author, to monitor progress. Provides example lesson plans and example goals addressing each area of communicative competence. \*Disclaimer: Please note that ancillary content (such as documents, audio, and video, etc.) may not be included as published in the original print version of this book.

The Inpatient Functional Communication Interview: Screening, Assessment, and Intervention (IFCI: SAI) is a set of four resources for speech-language pathologists (SLPs) and other healthcare professionals working in acute and rehabilitation hospitals. They can be used separately or together to enhance patient-provider communication in hospitals. The IFCI: SAI has been developed so healthcare professionals can identify and support patients who have difficulty communicating, with a focus on patients with communication disability. The following resources are included: \*Screening Questionnaire. Designed to identify patients who have difficulty communicating about their healthcare and will need support to communicate with healthcare providers in hospital. \*Inpatient Functional Communication Interview (IFCI). A semi-structured interview that the SLP conducts at the patient's bedside. During the interview, the SLP investigates how well the patient can communicate in everyday healthcare communication activities. If the SLP and patient have difficulty communicating, the clinician investigates if any

\*Impairment Rating Scales. These assist the SLP to rate their initial clinical impressions of the patient's speech intelligibility, spoken language, and cognitive-communicative function. Each rating scale provides descriptions of speech, language, and cognitive-communicative function on a five-point scale ranging from no impairment to complete impairment. \*Environmental Questionnaires (EQs). The set of EQs assist SLPs and other healthcare professionals to screen the communicative environment for factors influencing patient-provider communication in their setting. Once the factors that influence patient-provider communication have been identified, SLPs and other healthcare professionals may be better informed and more able to systematically address these factors to develop communicatively accessible hospital services.

Children's Speech distills scientific evidence from around the world on sound disorders across the areas of speech acquisition, assessment, analysis, diagnosis, and intervention, and presents it with practical knowledge to prepare speech-language pathologists (SLPs) to work with children and their families. The book is guided by two contemporary frameworks that direct the successful management of speech sound disorders in children: evidence-based practice (EBP) and the International Classification of Functioning Disability and Health—Children and Youth (ICF-CY). The foundation knowledge covers important topics including defining the population, types of speech sound disorders, anatomical structures, articulation and transcription of speech sounds, and theoretical foundations of speech and speech acquisition. Practical evidence-based knowledge is covered in chapters that mirror the stages of contact when working with children with speech sound disorders including assessment, analysis, goal setting, intervention principles and plans, intervention procedures, phonological interventions, motor speech interventions, and the conduct of EBP. The last chapter provides comprehensive clinical information for five clinical cases, including transcribed
