Words matter: they mold and mirror our values and our reality. And so it is with the language we use to think and talk about species other than our own. In *Tongue-Tied*, Hanh Nguyen unpacks the many metaphors, meanings, and grammatical formulations that speak to and echo our physical exploitation of other-than-human animals, and shows how they constrain our abilities to relate to our animal kin fairly and honestly. Full of subtle insights and richly suggestive observations, and drawing from Nguyen's own cross-cultural experiences, *Tongue-Tied* offers a glimpse of a language that is freed from euphemistic self-deception, one that accepts definition without limitation and difference without hierarchy.

## **Augmentative and Alternative Communication**

«Relevant for children and adults at all stages of communication development, this upper-level text is a must-have for SLPs, educators, and rehabilitation professionals who work with AAC users. The book presents current research and theory and guides readers through four skill areas important to the development of communicative competence: Linguistic competence. Learn about issues such as the impact of AAC on an individual's natural speech production, the development and use of picture-based communication systems, and the relationship between spoken language and the "language" of AAC systems. Operational competence. Consider issues related to technical operation of AAC systems, including motor development and control, cognitive factors like awareness and memory, and sensory-perceptual development. Social competence. Explore factors such as the effect of developmental

It explains the principles and procedures of AAC assessment and offers intervention techniques that are appropriate throughout the life span of children and adults with congenital or acquired communication disorders.

### **Introduction to Communication Disorders**

How do children learn their first words? The field of language development has been polarized by responses to this question. Explanations range from accounts that emphasize the importance of cognitive heuristics in language acquisition, to those that highlight the role of "dumb attentional mechanisms" in word learning. This monograph offers an alternative to these accounts. A hybrid view of word-learning, called the emergentist coalition theory, combines cognitive constraints, social-pragmatic factors, and global attentional mechanisms to arrive at a balanced account of how children construct principles of word learning. In twelve experiments, with children ranging from 12 to 25 months of age, data are described that support the emergentist coalition theory.

## **Classrooms**

Communities and countries who are not affluent or economically and socially disadvantaged present their own set of intervention circumstances that need to be taken into account when planning intervention for people with disabilities particularly those with AAC need. These contexts provide not only professionals, but all partners involved in the intervention process with unique challenges that require a reevaluation of AAC intervention programmes. This book presents a different perspective on AAC intervention by focusing on the application of various AAC related issues within a poverty context. It is intended for advanced students and professionals across disciplines that are interested in extending their knowledge and critical thinking to advance issues surrounding AAC intervention within a poverty context.

In school, but "locked out" 13 youth, each with fewer than 10 productive words to use to build their relationship with families, teachers, and friends. That is, until they were introduced to the System for Augmenting Language, or SAL. In a wonderful meshing of science and the real world, this remarkable book chronicles the process of language learning through augmented means for people who have significant difficulty acquiring spoken language. In engaging storytelling style, speech-language pathologist Ronski and psychologist Sevcik describe how they carried their research from language lab to school and in the process changed the lives of the youth to whom they brought the SAL. A replicable system that fosters naturalistic exchanges between communicative partners using electronic speech-output devices, the SAL extends the power of communication to children otherwise locked out of the world around them. With a new level of vocabulary mastery, students enjoy not only enhanced communicative skills but also higher judgments of competence from both familiar and unfamiliar observers. ### **Journal of Speech, Language, and Hearing Research**

This practically oriented book has been predominantly targeted at undergraduate speech and language therapy students, speech and language therapists who have recently started work in this field and other professionals working with people with learning disabilities. All the authors have had practical experience and/or conducted research in this field. The presentation of the chapters follow a 'need to know' order, starting with an exploration of a range of 'Service Delivery' issues, continuing with theoretical and practical issues related to 'Appraisal and Assessment of Communication Needs' and quickly moving on to management issues starting with 'Management Models' which is followed by a chapter on 'Early Intervention', work on 'Pre-symbolic and Pre-linguistic' development, and transition from 'Word to Phrase'. For those requiring to extend their knowledge in more specialised areas, a number of chapters deal with subjects such as the use of 'Augmentative and Alternative Communication', and working with 'Parents and Members of Related Professions'. The last two chapters address topics which have more recently attracted attention, these being the management of the communication needs of service
