winning historian comes a dazzling history of the birth of cultural anthropology and the adventurous scientists who pioneered it--a sweeping chronicle of discovery and the fascinating origin story of our multicultural world. A century ago, everyone knew that people were fated by their race, sex, and nationality to be more or less intelligent, nurturing, or warlike. But Columbia University professor Franz Boas looked at the data and decided everyone was wrong. Racial categories, he insisted, were biological fictions. Cultures did not come in neat packages labeled "primitive" or "advanced." What counted as a family, a good meal, or even common sense was a product of history and circumstance, not of nature. In *Gods of the Upper Air*, a masterful narrative history of radical ideas and passionate lives, Charles King shows how these intuitions led to a fundamental reimagining of human diversity. Boas's students were some of the century's most colorful figures and unsung visionaries: Margaret Mead, the outspoken field researcher whose *Coming of Age in Samoa* is among the most widely read works of social science of all time; Ruth Benedict, the great love of Mead's life, whose research shaped post-Second World War Japan; Ella Deloria, the Dakota Sioux activist who preserved the traditions of Native Americans on the Great Plains; and Zora Neale Hurston, whose studies under Boas fed directly into her now classic novel, *Their Eyes Were Watching God*. Together, they mapped civilizations from the American South to the South Pacific and from Caribbean islands to Manhattan's city streets, and unearthed an essential fact buried by centuries of prejudice: that humanity is an undivided whole. Their revolutionary findings would go on to

It has been shown time and again that even though all citizens may be accorded equal standing in the constitution of a liberal democracy, such a legal provision hardly guarantees state protections against discrimination and political exclusion. More specifically, why do we find pervasive gender-based discrimination, exclusion, and violence in India when the Indian Constitution supports an inclusive

democracy committed to gender and caste equality? In *Gendered Citizenship*, Natasha Behl offers an examination of Indian citizenship that weaves together an analysis of sexual violence law with an in-depth ethnography of the Sikh community to explore the contradictory nature of Indian democracy--which gravely affects its institutions and puts its citizens at risk. Through a situated analysis of citizenship, Behl upends longstanding academic assumptions about democracy, citizenship, religion, and gender. This analysis reveals that religious spaces and practices can be sites for renegotiating democratic participation, but also uncovers how some women engage in religious community in unexpected ways to link gender equality and religious freedom as shared goals. *Gendered Citizenship* is a groundbreaking inquiry that explains why the promise of democratic equality remains unrealized, and identifies potential spaces and practices that can create more egalitarian relations.

NAMED ONE OF THE BEST BOOKS OF THE YEAR BY RT BOOK REVIEWS Perfect for fans of Philippa Gregory, Alison Weir, and Showtime's *The Tudors*, *The Boleyn King* is the first book in an enthralling trilogy that dares to imagine: What if Anne Boleyn had actually given Henry VIII a son who grew up to be king? Just seventeen years old, Henry IX, known as William, is a king bound by the restraints of the regency yet anxious to prove himself. With the French threatening battle and the Catholics sowing the seeds of rebellion at home, William trusts only three people: his older sister Elizabeth; his best friend and loyal counselor, Dominic; and Minuette, a young orphan raised as a royal ward by William's mother, Anne Boleyn. Against a tide of secrets, betrayal, and murder, William finds himself fighting for the very soul of his kingdom. Then, when he and Dominic both fall in love with Minuette, romantic obsession looms over a new generation of Tudors. One among them will pay the

hometown of Charlotte, North Carolina, so she could watch her seven-year-old sister Taylor grow up. After Taylor misjudged a set of stairs at the State Fair, the family took her to the doctors and learned the shocking news: Taylor had Batten disease. This rare, fatal, genetic disease causes seizures and the loss of the ability to walk and talk. Laura thought she'd get to watch her baby sister grow up, but instead she'd get to watch her die. Laura threw herself into researching, support, and advocacy. She founded Taylor's Tale with her mother and friends--a charity that has so far raised \$1 million for medical research and inspired a law establishing the nation's first rare disease advisory council in North Carolina.

clear and accessible style, Frank M. Snowden reveals the ways that diseases have not only influenced medical science and public health, but also transformed the arts, religion, intellectual history, and warfare. A multidisciplinary and comparative investigation of the medical and social history of the major epidemics, this volume touches on themes such as the evolution of medical therapy, plague literature, poverty, the environment, and mass hysteria. In addition to providing historical perspective on diseases such as smallpox, cholera, and tuberculosis, Snowden examines the fallout from recent epidemics such as HIV/AIDS, SARS, and Ebola and the question of the world's preparedness for the next generation of diseases.

#1 NEW YORK TIMES BESTSELLER When and how did the universe begin? Why are we here? What is the nature of reality? Is the apparent "grand design" of our universe evidence of a benevolent creator who set things in motion—or does science offer another explanation? In this startling and lavishly illustrated book, Stephen Hawking and Leonard Mlodinow present the most recent scientific thinking about these and other abiding mysteries of the universe, in nontechnical language marked by brilliance and simplicity. According to quantum theory, the cosmos does not have just a single existence or history. The authors explain that we ourselves are the product of quantum fluctuations in the early universe, and show how quantum theory predicts the "multiverse"—the

idea that ours is just one of many universes that appeared spontaneously out of nothing, each with different laws of nature. They conclude with a riveting assessment of M-theory, an explanation of the laws governing our universe that is currently the only viable candidate for a “theory of everything”: the unified theory that Einstein was looking for, which, if confirmed, would represent the ultimate triumph of human reason.

The Power to Win

Recent literature has identified modern “parenting” as an expert-led practice—one which begins with pre-pregnancy decisions, entails distinct types of intimate relationships, places intense burdens on mothers and increasingly on fathers too. Exploring within diverse historical and global contexts how men and women make—and break—relations between generations when becoming parents, this volume brings together innovative qualitative research by anthropologists, historians, and sociologists. The chapters focus tightly on inter-generational transmission and demonstrate its importance for understanding how people become parents and rear children.

Do you want your students to just take psychology or to experience psychology? Experience Psychology is a complete learning system that empowers students to personally, critically, and actively experience the impact of psychology in everyday life. Experience Psychology is about, well, experience—our own behaviors; our relationships at home and in our communities, in school and at work; and our interactions in different learning environments. Grounded in meaningful real-world contexts, Experience Psychology’s contemporary examples, personalized author notes, and applied exercises speak directly to students, allowing them to engage with psychology and to learn verbally, visually, and experientially—by reading, seeing, and doing. With the Experience Psychology learning system, students do not just “take” psychology but actively experience it. Experience a Personalized Approach How many students think they know everything about introductory psychology but struggle on the first exam? LearnSmart, McGraw-Hill’s adaptive learning system, pinpoints students’ metacognitive abilities and limitations, identifying what they know—and more importantly, what they don’t know. Using Bloom’s Taxonomy and a highly sophisticated “smart” algorithm, LearnSmart creates a personalized,

customized study plan that's unique to each individual student's demonstrated needs. With virtually no administrative overhead, instructors using LearnSmart are reporting an increase in student performance by a letter-grade or more. Throughout Experience Psychology, students find a wealth of personal pedagogical "asides" directly from Laura King to guide their understanding and stimulate their interest as they read. Some of these helpful notes highlight crucial terms and concepts; others prompt students to think critically about the complexities of the issues; other notes encourage students to apply what they have learned to their prior reading or to a new situation. These mini-conversations between author and students help develop analytical skills for students to carry and apply well beyond their course.

Experience an Emphasis on Critical Thinking
Experience Psychology stimulates critical reflection and analysis. Challenge Your Thinking sidebar features involve students in debates relevant to findings from contemporary psychological research. Thought-provoking questions encourage examination of the evidence on both sides of a debate or issue. Also oriented toward critical thought are the text's Intersection selections. Showcasing studies in different areas of psychological research that are being conducted on the same topic, the Intersections shed light on the links between, and the reciprocal influences of, this exciting work, and they raise provocative questions for student reflection and class discussion.

Experience an Emphasis on Active Engagement
With the new Experience It! feature, students can use their mobile devices to practice and master key concepts wherever and whenever they

choose. By snapping easily located QR codes, students gain access to videos, Concept Clips, and related news articles, for a highly portable, rich, and immersive experience that powerfully reinforces the chapter reading. Through Do It!, a series of brief, reoccurring sidebar activities linked to the text reading, students get an opportunity to test their assumptions and learn through hands-on exploration and discovery. Reinforcing that the science of psychology requires active participation, Do It! selections include, for example, an exercise on conducting an informal survey to observe and classify behaviors in a public setting, as well as an activity guiding students on how to research a “happiness gene.” Such exercises provide students with a vibrant and involving experience that gets them thinking as psychologists do. Experience Psychology helps students to perform to their maximum potential in and out of the classroom, fully engaging them in the content and experiences that comprise the world’s most popular undergraduate major.

A NEW YORK TIMES 100 NOTABLE BOOKS OF 2019 SELECTION From #1 New York Times bestselling author Stephen King, the most riveting and unforgettable story of kids confronting evil since It. In the middle of the night, in a house on a quiet street in suburban Minneapolis, intruders silently murder Luke Ellis’s parents and load him into a black SUV. The operation takes less than two minutes. Luke will wake up at The Institute, in a room that looks just like his

own, except there's no window. And outside his door are other doors, behind which are other kids with special talents—telekinesis and telepathy—who got to this place the same way Luke did: Kalisha, Nick, George, Iris, and ten-year-old Avery Dixon. They are all in Front Half. Others, Luke learns, graduated to Back Half, "like the roach motel," Kalisha says. "You check in, but you don't check out." In this most sinister of institutions, the director, Mrs. Sigsby, and her staff are ruthlessly dedicated to extracting from these children the force of their extranormal gifts. There are no scruples here. If you go along, you get tokens for the vending machines. If you don't, punishment is brutal. As each new victim disappears to Back Half, Luke becomes more and more desperate to get out and get help. But no one has ever escaped from the Institute. As psychically terrifying as Firestarter, and with the spectacular kid power of It, The Institute is Stephen King's gut-wrenchingly dramatic story of good vs. evil in a world where the good guys don't always win.

My Life as a Villainess

Fathers are often neglected in histories of family life in Britain. *Family Men* provides the first academic study of fathers and families in the period from the First World War to the end of the 1950s. It takes a thematic approach, examining different aspects of fatherhood, from the duties it encompassed to the ways in which it related to men's identities. The historical approach is socio-cultural: each chapter examines a wide range of historical source materials in order to analyse both cultural representations of fatherhood and related social norms, as well as exploring the practices and experiences of individuals and families. It uncovers the debates surrounding parenting and family life and tells the stories of men and their children. While many historians have examined men's relationship to the home and family in histories of gender, family life, domestic spaces, and class cultures more generally, few have specifically examined fathers as crucial family members, as historical actors, and as emotional individuals. The history of fatherhood is extremely significant to contemporary debate: assumptions about fatherhood in the past are constantly used to support arguments about the state of fatherhood today and the need for change or otherwise in the

File Type PDF By Laura King The Science Of Psychology An Appreciative View 1st Edition

future. Laura King charts men's changing experiences of fatherhood, suggesting that although the roles and responsibilities fulfilled by men did not shift rapidly, their relationships, position in the family, and identities underwent significant change between the start of the First World War and the 1960s.

The Science of Psychology: An Appreciative View

There are many reasons to be curious about the way people learn, and the past several decades have seen

an explosion of research that has important implications for individual learning, schooling, workforce training, and policy. In 2000, *How People Learn: Brain, Mind, Experience, and School: Expanded Edition* was published and its influence has been wide and deep. The report summarized insights on the nature of learning in school-aged children; described principles for the design of effective learning environments; and provided examples of how that could be implemented in the classroom. Since then, researchers have continued to investigate the nature of learning and have generated new findings related to the neurological processes involved in learning, individual and cultural variability related to learning, and educational technologies. In addition to expanding scientific understanding of the mechanisms of learning and how the brain adapts throughout the lifespan, there have been important discoveries about influences on learning, particularly sociocultural factors and the structure of learning environments. *How People Learn II: Learners, Contexts, and Cultures* provides a much-needed update incorporating insights gained from this research over the past decade. The book expands on the foundation laid out in the 2000 report and takes an in-depth look at the constellation of influences that affect individual learning. *How People Learn II* will become an indispensable resource to understand learning throughout the lifespan for educators of students and adults.
