Mastering Lob Development for Silverlight 5

Effective decisions are crucial to the success of any software project, but to make better decisions you need a better decision-making process. In Evaluating Project Decisions , leading project management experts introduce an innovative decision model that helps you tailor your decision-making process to systematically evaluate all of your decisions and avoid the bad choices that lead to project failure. Using a real-world, case study approach, the authors show how to evaluate software project problems and situations more effectively, thoughtfully assess your alternatives, and improve the decisions you make. Drawing on their own extensive research and experience, the authors bridge software engineering theory and practice, offering guidance that is both well-grounded and actionable. They present dozens of detailed examples from both successful and unsuccessful projects, illustrating what to do and what not to do. Evaluating Project Decisions will help you to analyze your options and ultimately make better decisions at every stage in your project, including: Requirements–Elicitation, description, verification, validation, negotiation, contracting, and management over the software life cycle Estimates–Conceptual solution design, decomposition, resource and overhead allocation, estimate construction, and change management Planning–Defining objectives, policies, and scope; planning tasks, milestones, schedules, budgets, staff and other resources; and managing projects against plans Product–Proper product definition, development process management, QA, configuration management, delivery, installation, training, and field service Process–Defining, selecting, understanding, teaching, and measuring processes; evaluating process performance; and process improvement or optimization In addition, you will see how to evaluate decisions related to risk, people, stakeholder expectations, and global development. Simply put, you'll use what you learn here on every project, in any industry, whatever your goals, and for projects of any duration, size, or type.

Collecting Case Knives

This book deals with in-cylinder pressure measurement and its post-processing for combustion quality analysis of conventional and advanced reciprocating engines. It offers insight into knocking and combustion stability analysis techniques and algorithms in SI, CI, and LTC engines, and places special emphasis on the digital signal processing of in-cylinder pressure signal for online and offline applications. The text gives a detailed description on sensors for combustion measurement, data acquisition, and methods for estimation of performance and combustion parameters. The information provided in this book enhances readers' basic knowledge of engine combustion diagnostics and serves as a comprehensive, ready reference for a broad audience including graduate students, course instructors, researchers, and practicing engineers in the automotive, oil and other industries concerned with internal combustion engines.

Inspecting the Aging Sailboat

For 200 years industrial civilization has relied on the combustion of abundant and cheap carbon fuels. But continued reliance has had perilous consequences. On the one hand there is the insecurity of relying on the world's most unstable region - the Middle East - compounded by the imminence of peak oil, growing scarcity and mounting prices. On the other, the potentially cataclysmic consequences of continuing to burn fossil fuels, as the evidence of accelerating climate change shows. Yet there is a solution: to make the transition to renewable sources of energy and distributed, decentralized energy generation. It is a model that has been proven, technologically, commercially and politically, as Scheer comprehensively demonstrates here. The alternative of a return to nuclear power - again being widely advocated - he shows to be compromised and illusory. The advantages of renewable energy are so clear and so overwhelming that resistance to them needs diagnosis - which Scheer also provides, showing why and how entrenched interests and one-dimensional structures of thinking oppose the transition, and what must be done to overcome these obstacles. The new book from the award-winning author of THE SOLAR ECONOMY and A SOLAR MANIFESTO demonstrates why the transition to renewable energy is essential and how it can be done.

Childhood--playtime?

This book is the admirable result of ten years' experience in organizing and teaching courses in biological reaction

engineering. It gives engineers and scientists the information they need to analyze the behavior of complex biological reactors using mathematical equations and a dynamic simulation computer language. Part I treats the fundamentals of modelling (mass balance equations, involving reaction kinetics and mass-transfer rates), making them readily understandable to those new in the field. Part II gives 45 example problems, complete with models and programs. This book is the first of its kind to include a diskette with a commercial simulation language. The diskette can be run on any DOS personal computer. Users will appreciate how the simulation runs can be interrupted for interactive parameter changes and instructive plotting.

Project 2010

"Sydney Smith" by George William Erskine Russell. Published by Good Press. Good Press publishes a wide range of titles that encompasses every genre. From well-known classics & literary fiction and non-fiction to forgotten−or yet undiscovered gems−of world literature, we issue the books that need to be read. Each Good Press edition has been meticulously edited and formatted to boost readability for all e-readers and devices. Our goal is to produce eBooks that are user-friendly and accessible to everyone in a high-quality digital format.

Hull & Deck Repair

This ILT Series course teaches the basic commands and features of Microsoft Project 2010. Students will learn how to create and modify task lists, establish a project schedule, create calendars, assign resources to tasks, track costs, and work with different views and tables. Students will also apply filters and groups, and sort task and resource data. Finally, they will learn how to resolve resource conflicts. Comes with CertBlaster pre- and post-assessment software (download).

Exploring IBM E-business Software

One of the major challenges for modern organizations is the management of individual and collective knowledge, which is at the root of specific practices designed to optimize knowledge acquisition, maintenance and application. There are, however, still a disproportionately low number of studies focused on the structure and nature of knowledge. This book tackles the subject of daily knowledge: the knowledge related to everyday tasks. How does this knowledge present itself in the mind? How do we acquire and preserve it? To answer these questions, the authors explore a number of techniques which help to keep track of information produced in collaborative activity and extract knowledge by aggregating these traces.

Energy Autonomy

This book deals with novel advanced engine combustion technologies having potential of high fuel conversion efficiency along with ultralow NOx and particulate matter (PM) emissions. It offers insight into advanced combustion modes for efficient utilization of gasoline like fuels. Fundamentals of various advanced low temperature combustion (LTC) systems such as HCCI, PCCI, PPC and RCCI engines and their fuel quality requirements are also discussed. Detailed performance, combustion and emissions characteristics of futuristic engine technologies such as PPC and RCCI employing conventional as well as alternative fuels are analyzed and discussed. Special emphasis is placed on soot particle number emission characterization, high load limiting constraints, and fuel effects on combustion characteristics in LTC engines. For closed loop combustion control of LTC engines, sensors, actuators and control strategies are also discussed. The book should prove useful to a broad audience, including graduate students, researchers, and professionals Offers novel technologies for improved and efficient utilization of gasoline like fuels; Deals with most advanced and futuristic engine combustion modes such as PPC and RCCI; Comprehensible presentation of the performance, combustion and emissions characteristics of low temperature combustion (LTC) engines; Deals with closed loop combustion control of advanced LTC engines; State-of-the-art technology book that concisely summarizes the recent advancements in LTC technology. .

"A marvelous and insightful review of the creationism/evolution controversy by an individual who has contributed immeasurably to the public understanding of science."—Lee Hood, author of The Code of Codes: Scientific and Social Issues

in the Human Genome Project "I know of no book that explains the evolution/creation controversy in such a comprehensive manner, and yet in a style that will be understood by high school students. It demarcates those areas of thought that belong to faith-supported religion on the one hand, and reason-supported science on the other without denigrating either."—Richard E. Dickerson, UCLA "There are few scientists as knowledgeable and clear about how science works, and as thoughtful about the creation and evolution controversy as John A. Moore. A product of Moore's wisdom and his over 60 years experience as a brilliant and productive scholar, From Genesis to Genetics will bring understanding to both citizens and scientists who are grappling with the contentious issues of science and religion, evolution and creationism."—Eugenie C. Scott, Executive Director, National Center for Science Education

Shrader-Frechette looks at current U.S. government policy regarding the nation's high-level radioactive waste both scientifically and ethically. What should be done with our nation's high-level radioactive waste, which will remain hazardous for thousands of years? This is one of the most pressing problems faced by the nuclear power industry, and current U.S. government policy is to bury "radwastes" in specially designed deep repositories. K. S. Shrader-Frechette argues that this policy is profoundly misguided on both scientific and ethical grounds. Scientifically—because we cannot trust the precision of 10,000-year predictions that promise containment of the waste. Ethically—because geological disposal ignores the rights of present and future generations to equal treatment, due process, and free informed consent. Shrader-Frechette focuses her argument on the world's first proposed high-level radioactive waste facility at Yucca Mountain, Nevada. Analyzing a mass of technical literature, she demonstrates the weaknesses in the professional risk-assessors' arguments that claim the site is sufficiently safe for such a plan. We should postpone the question of geological disposal for at least a century and use monitored, retrievable, above-ground storage of the waste until then. Her message regarding radwaste is clear: what you can't see can hurt you.

This highly practical, expert level tutorial teaches you to build a Line of Business application with the aid of a case study which gradually builds throughout the book. It also includes a jumpstart chapter for developers coming from other technologies. If you already have a firm grasp of Silverlight development and are keen to advance your specialist knowledge of Line of Business (LOB) application development, then Expert Line of Business Application Development for Silverlight 5: Quick Start Guide is for you. If you are a developer with experience of other technologies, you may also find this book useful.

The Systemic Practice of Misinterpretation of Scientific Data

This book is only possible through the will of God. The inspirational messages given to us at times are very evident in this story and are meant for all. God can and will work through anyone whose heart is open and whose mind is still enough to hear that gentle voice speak to them. It is then that we realize how much our heavenly Father loves each one of us and wants us all to have a close relationship with Him. My name is Elisabeth, and this is my journey with the Lord. I was given this opportunity to share a part of my life with you. Alma, my sister, is truly blessed and has accompanied me through this journey. Some of the pictures and most of the inspirational messages associated with the pictures were given to Alma for us to use in this book. The pictures are all a gift from God. For this we humbly thank Him and our Blessed Mother, for allowing us to be a part of God's plan.

This detailed look at IBM's software products for e-business enables IBM users to gain a fundamental understanding of e-business architecture, where IBM software products fit into that architecture, and where to go to get more information. The main products and platforms for development tools and components, application server software, and secure network and management software are described. This book also distinguishes between two or more IBM software products that appear to serve the same purpose but really have different applications. Key products covered include DB2, Web Sphere, Lotus Domino, and Tivoli. This replaces 1885068581.

ASE Test Preparation - A2 Automatic Transmissions and Transaxles

The fifth edition of Delmar's Automotive Service Excellence (ASE) Test Preparation Manual for the A2 AUTOMATIC TRANSMISSIONS AND TRANSAXLES certification exam contains an abundance of content designed to help you successfully pass your ASE exam. This manual will ensure that you not only understand the task list and therefore the content your actual certification exam will be based upon, but also provides descriptions of the various types of questions on a typical ASE exam, as well as presents valuable test taking strategies enabling you to be fully prepared and confident on test day.

An intranet portal project may well be the first and last project in your organisation that truly touches everyone, from the office of your CEO to the newest recruit. It may well be the most significant investment that you ever make in your people, their processes and their systems and has the power and potential to transform your organisation. However, it can be a tough project to deliver, bringing great exposure to its participants. All your customers will be only a small march away down the corridor and will all know where you live! Considering the $1.5 billion market for intranet portal technology worldwide, there are surprisingly few books on the topic (and those typically either very technical or very theoretical). The Intranet Portal Guide is a deliberately practical handbook for the stressed middle manager, seeking to make things happen in their organisation. The book is divided into three sections (before, during and after) and 31 chapters, addressing everything from the key issue of how to make the business case through to ongoing performance enhancement and benefit realisation. It is packed full of tools, templates, plans and processes for successful delivery - based on real life experience of implementation at two major UK companies.

Sam Is Born

In The Systemic Practice of Misinterpretation of Scientific Data, the author unfolds the ways in which researchers misinterpret their data to promote a hypothesis with the aim of attracting the attention of the scientific community. By providing examples, the author explains how flawed research findings enter and remain in scientific literature for a long time. This book gives insights not only to researchers in the sciences, but also to journal reviewers and to various governmental and private agencies that work to promote science. The message of the book is positive and clear: it is possible to identify the flaws in scientific research by scrutinizing the subject matter thoroughly, thus saving researchers around the globe time and money. It is generally believed that the scientific community is relatively free of corruption and that it adopts good scientific practices. However, flawed research findings may occur not only from human error, but also from the intentional attempts of some researchers to promote their preconceived hypotheses. The author warns that unless certain practices in research are checked, a point will soon be reached when scientific research will not be worth the money invested in it. The book starts with some of the fundamental concepts in pharmacokinetics and the pharmacodynamics of antibiotics. Then, four related but independent topics are discussed: persisters, small colony variants, viable but non-culturable bacteria, and senescent bacteria. Each topic is divided into two sections: the first is a review of the literature; the second questions the validity of the current hypotheses and findings. In the subsequent chapters, a simpler hypothesis is offered after integration of the four topics. Finally, the impact of creating illusions in research is discussed.

A fibreglass hull's seamless nature leads many boatowners to conclude that repair must be difficult. But it's not. There is virtually no repair to a fibreglass hull or deck that a motivated owner can't do as well (if not as quickly) as a professional, and in this practical manual, Don Casey gives you all the advice you need to repair and maintain your fibreglass boat. With admirably clear explanations and diagrams, Casey explains how to mend leaks, seal joints, fix cracks and holes, replace portlights, restore a hull's gloss, renew non-slip decks, and deal with keel and rudder damage as well as core problems. In fact he covers everything the boater needs to know, and much more. 'A very effective guide to repairs… so clear and compact.' Practical Boat Owner
