Philosophy and Neuroscience: A Ruthlessly Reductive Account is the first book-length treatment of philosophical issues and implications in current cellular and molecular neuroscience. John Bickle articulates a philosophical justification for investigating "lower level" neuroscientific research and describes a set of experimental details that have recently yielded the reduction of memory consolidation to the molecular mechanisms of long-term potentiation (LTP). These empirical details suggest answers to recent philosophical disputes over the nature and possibility of psycho-neural scientific reduction, including the multiple realization challenge, mental causation, and relations across explanatory levels.

Bickle concludes by examining recent work in cellular neuroscience pertaining to features of conscious experience, including the cellular basis of working memory, the effects of explicit selective attention on single-cell activity in visual cortex, and sensory experiences induced by cortical microstimulation.

The grammar presents the structure of the present-day language, relates it to its diachronic sources, and adds a semantic perspective to the description.

Through exegetical studies of 1 Corinthians and Galatians, John Lewis shows how Paul synthesises theology and ethics - which interpreters frequently separate - as integrated aspects of Christian thinking and living. This fusion becomes evident in Paul's complex process of theological, moral reasoning that lies beneath the surface of his letters for which we have coined the phrase 'theo-ethical reasoning'. The book also examines how Paul encourages his churches to apply this theo-ethical reasoning in the community practice of spiritual discernment - a dialogical, comparative process of reasoned reflection on behaviour and experience. Through this practice of looking for life, community members are led by the Spirit as they reason together, attempting to associate the manifestations of new life with conduct that faithfully portrays Christ's self-giving pattern. This correlation of conduct with experience grounds Paul's own proclamation of Jesus Christ in word and deed. It also becomes the foundation for believers' faith and hope as they come to know Christ and experience the power of God. Thus, the book concludes that the practice of spiritual discernment by means of theo-ethical reasoning lies at

the centre of Paul's religion.

This book provides an introduction to the laws of the Middle East, defining the contours of a field of study that deserves to be called 'Middle Eastern law'. It introduces Middle Eastern law as a reflection of legal styles, many of which are shared by Islamic law and the laws of Christian and Jewish Near Eastern communities. It offers a detailed survey of the foundations of Middle Eastern Law, using court archives and an array of legal sources from the earliest records of Hammurabi to the massive compendia of law in the Islamic classical age through to the latest decisions of Middle Eastern high courts. It focuses on the way legislators and courts conceive of law and apply it in the Middle East. It builds on the author's extensive legal practice, with the aim of introducing the Middle Eastern law's main sources and concepts in a manner accessible to non-specialist legal scholars and practitioners alike. The book begins with an exploration of the depth and variety of Middle Eastern law, introducing the concepts of shari'a, fiqh,

and qanun, (which all mean 'law'), and dwelling on Islamic law as the 'common law' of the Middle East. It provides a historical introduction to the contemporary Middle East, exploring political systems, constitutional law, judicial review, the laws of tort and obligations, commercial law (including Islamic banking, company law, capital markets, and commercial arbitration); and examines legislative reform in family law and the position of women in the legal system. The author considers the interaction between Islamic and Western laws and includes a bibliography designed for further research into the jurisdictions and themes explored throughout the book.

The Power of Enterprise-wide Project Management

Executives in the most forward-thinking businesses are taking project management beyond specific projects in manufacturing, product development, and IT, and adopting its powerful methods company-wide. This book describes in detail the four key functions, also known as the Four Pillars of the EPMO House of Excellence, that are crucial to building an effective Enterprise Project Management Office (EPMO).

Growing up in Singapore in the 80s has been challenging. I didn't know much about life or economy. I didn't know what I want to do apart from playing. I know I had to study and get a job. In school we had to write composition about our profession when we grow up. I had never wanted to be a philosopher, let alone writing about social philosophy. It is just that growing up with a single parent is tough. It is tougher when she is uneducated and I had to learn most things by myself. After my National Service, I decided to further studies. That was when I was exposed to philosophy and psychology in the UK. After graduation in 1999 with a degree in Electronics, I came back home to resume my National Service (I disrupt it and had about 2 months left). The life in UK exposed me to something that I did not notice when growing up in Singapore. I find local social scene unsatisfactory. They are Confucians, Muslims, Christians, freethinkers and humanists. Most time, they are preoccupied with how to earn more money. Religion does not give me the fulfillment that it promised. In addition, most were based on Singaporeans' interpretation of the Bible and Buddhism's dharma. Most times, I feel that everything that Singaporeans do has got to do with wealth creation or at least with the expenditure of it. It end up like what Pope Francis referred to as "the cult of money." Organised religion involves more fear-mongering than cultivating an inner grace and peace. Hence this book is about how I relate an ancient thinker's ethics (Aristotle) to the present day. I find Aristotle's ethics to most suit my needs as a man and lover. It does not pretend to be more than what it seek, the golden mean. It does require us to think and explore the values to find balance and achieve

wisdom with intellectual and moral virtues. I also find other philosophers (French or not) particularly insightful and thought-provoking. They offer me explanation and exploration on subjects like love, sex, and death. Freudian psychoanalysis are also very penetrating in their findings and insights. Moreover, I needed some contemporary psychological theory, not in-depth psychoanalysis, to back Aristotle's model of ethics (intellectual and moral virtues). Hence the psychological background of my book. I got acquainted with these psychological theories when I was preparing myself to be a financial consultant. I later found out more about them and they became useful in my work and life. Hence I would like to share it with people in Asia so that they can ask the right kind of questions in life in order to learn more about themselves and the social milieu they are living in. Because everyone of us are affected by the social sciences (politics, economics and sociology). This book will, I hope, allow us to understand why we are irrational and how we can make rational changes through reasonings in their life and achieving eudaimonia. My wish is simply to share what I enjoy doing, apart from creating useful ideas to improve the world. Through my book, I hope to make others understand religion, science and philosophy and how they play an increasingly integral part in the Asian century.

The Quebec Law Index Embracing All the Legislation of the Province of Quebec from 1867, Down to and Including the Year 1898

Since the end of the last century, UN peacekeeping has undergone a fundamental and largely unexamined change. Peacekeeping operations, long expected to use force only in self-defence and to act impartially, are now increasingly relied upon by the Security Council as a means to maintain and restore security within a country. The operations are established under Chapter VII of the UN Charter and

some are empowered to use 'all necessary measures', language traditionally reserved for enforcement operations. Through a close examination of these twenty-first century peacekeeping operations - including operations in Sierra Leone, the Democratic Republic of the Congo, Liberia, Côte d'Ivoire, Haiti and the Darfur region of the Sudan - the book shows that they are, for the most part, fundamentally ill-suited to the enforcement-type tasks being asked of them. The operations, which are under-funded, under-equipped and whose troops are under-trained, frequently lurch from crisis to crisis. There is scant evidence, some 10 years on, that matters are likely to improve. The book argues that bestowing enforcement-type functions on a peacekeeping operation is misconceived. Such operations are likely to be unsuccessful in their enforcement-type tasks, thereby causing serious damage to the excellent reputation of UN peacekeeping, and the UN more broadly. In addition, because such operations are more likely to be perceived as partial, their ability to carry out traditional (non-forceful) peacekeeping tasks may be impeded. Finally, the Security Council's practice of charging peacekeeping operations with enforcement functions lessens the pressure on the Council to work to establish genuine enforcement operations - ie, operations that are considerably better suited to restoring peace and security. 'Dr Sloan is able to show, in knowledgeable detail, not only what has changed over the years, but also what has brought these changes about. His analysis leads him to offer not only well-informed insights, but critical observations, too. This book is a pleasing combination of detailed scrutiny of topics already familiar (provisional

measures, consent, so-called 'Chapter VI1/2' action, implied powers) and a rigorous questioning as to their place in – or indeed, relevance at all to – militarised peacekeeping. The reader will find much new terrain traversed, and plenty of out-of-the-box thinking.' From the foreword by Dame Rosalyn Higgins

The Unidroit Principles of International Contracts, first published in 1994, have met with extraordinary success in the legal and business community worldwide. Prepared by a group of eminent experts from all major legal systems of the world, they provide a comprehensive set of rules for international commercial contracts. Available in more than 20 language versions, they are increasingly being used by national legislatures as a source of inspiration in law reform projects, by lawyers as guidelines in contract negotiations and by arbitrators as a legal basis for the settlement of disputes. In 2004 a new edition of the Unidroit Principles was approved, containing five new chapters and adaptations to take into account electronic contracting. This new edition of An International Restatement of Contract Law is the first comprehensive introduction to the Unidroit Principles 2004. In addition, it provides an extensive survey and analysis of the actual use of the Unidroit Principles in practice with special emphasis on the different ways in

U.S. History

This text, designed for a second year calculus course, can follow any standard first year course in one-variable calculus. Its purpose is to cover the material most useful at this level, to maintain a balance between theory and practice, and to develop techniques and problem solving skills. The topics fall into several categories: Infinite series and integrals Chapter 1 covers convergence and divergence of series and integrals. It contains proofs of basic convergence tests, relations between series and Integrals, and manipulation with geometric, exponential, and related series. Chapter 2 covers approximation of functions by Taylor polynomials, with emphasis on numerical approximations and estimates of remainders. Chapter 3 deals with power series, including intervals of convergence, expansions of functions, and uniform convergence. It features calculations with series by algebraic operations, substitution, and term-by-term differentiation and integration. Vector methods Vector algebra is introduced in Chapter 4 and applied to solid analytic geometry. The calculus of one-variable vector functions and its applications to space curves and particle mechanics comprise Chapter 5. Linear algebra Chapter 7 contains a practical introduction to linear algebra in two and three dimensions. We do not attempt a complete treatment of foundations, but rather limit ourselves to those topics that have immediate application to calculus. The main topics are linear transformations in \mathbb{R}^2 and \mathbb{R}^3 , their matrix representations, manipulation with matrices, linear systems, quadratic forms, and

quadric surfaces. Differential calculus of several variables Chapter 6 contains preliminary material on sets in the plane and space, and the definition and basic properties of continuous functions. This is followed by partial derivatives with applications to maxima and minima. Chapter 8 continues with a careful treatment of differentiability and applications to tangent planes, gradients, directional derivatives, and differentials. Here ideas from linear algebra are used judiciously. Chapter 9 covers higher order partial derivatives, Taylor polynomials, and second derivative tests for extrema. Multiple integrals In Chapters 10 and 11 we treat double and triple integrals intuitively, with emphasis on iteration, geometric and physical applications, and coordinate changes. In Chapter 12 we develop the theory of the Riemann integral starting with step functions. We continue with Jacobians and the change of variable formula, surface area, and Green's Theorem. Differential equations Chapter 13 contains an elementary treatment of first order equations, with emphasis on linear equations, approximate solutions, and applications. Chapter 14 covers second order linear equations and first order linear systems, including matrix series solutions. These chapters can be taken up any time after Chapter 7. Complex analysis The final chapter moves quickly through basic complex algebra to complex power series, shortcuts using the complex exponential function, and applications to integration and differential equations. Features The key points of one-variable calculus are reviewed briefly as needed. Optional topics are scattered throughout, for example Stirling's Formula, characteristic roots and vectors, Lagrange multipliers, and Simpson's Rule for
