## China Goes to Sea

China's maritime "gray zone" operations represent a new challenge for the U.S. Navy and the sea services of our allies, partners, and friends in maritime East Asia. There, Beijing is waging what some Chinese sources term a "war without gunsmoke." Already winning in important areas, China could gain far more if left unchecked. One of China's greatest advantages thus far has been foreign difficulty in understanding the situation, let alone determining an effective response. With contributions from some of the world's leading subject matter experts, this volume aims to close that gap by explaining the forces and doctrines driving China's paranaul expansion, operating in the "gray zone" between war and peace. The book covers China's major maritime forces beyond core gray-hulled Navy units, with particular focus on China's second and third sea forces: the "white-hulled" Coast Guard and "blue-hulled" Maritime Militia. Increasingly, these paranaul forces, and the "gray zone" in which they typically operate, are on the frontlines of China's seaward expansion.

## Maritime Strategy and Global Order

Chinese politics are at a crossroads as President Xi Jinping amasses personal power and tests the constraints of collective leadership. In the years since he became general secretary of the Chinese Communist Party in 2012, Xi Jinping has surprised many people in China and around the world with his bold anti-corruption campaign and his aggressive consolidation of power. Given these new developments, we must rethink how we analyze Chinese politics—an urgent task as China now has more influence on the global economy and regional security than at any other time in modern history. Chinese Politics in the Xi Jinping Era examines how the structure

and dynamics of party leadership have evolved since the late 1990s and argues that "inner-party democracy"—the concept of collective leadership that emphasizes deal making based on accepted rules and norms—may pave the way for greater transformation within China's political system. Xi's legacy will largely depend on whether he encourages or obstructs this trend of political institutionalization in the governance of the world's most populous and increasingly pluralistic country. Cheng Li also addresses the recruitment and composition of the political elite, a central concern in Chinese politics. China analysts will benefit from the meticulously detailed biographical information of the 376 members of the 18th Central Committee, including tables and charts detailing their family background, education, occupation, career patterns, and mentor-patron ties.

### **Chinese Maritime Power in the 21st Century**

One of this century's most significant events, China's maritime transformation is already making waves. Yet China's course and its implications, including at sea, remain highly uncertain—triggering intense speculation and concern from many quarters and in many directions. It has never been more important to assess what ships China can supply its navy and other maritime forces with, today and in the future. China's shipbuilding industry has grown more rapidly than any other in modern history. Commercial shipbuilding output jumped thirteen-fold from 2002-12. Beijing has largely met its goal of becoming the world's largest shipbuilder by 2015. Yet progress is uneven, with military shipbuilding leading overall but with significant weakness in propulsion and electronics for military and civilian applications alike. Moreover, no other book has answered three pressing questions: What are China's prospects for success in key areas of naval shipbuilding? What are the likely results for China's navy? What are the implications for the U.S. Navy? To address these critical, complex issues, this volume brings together some of the world's leading experts and linguistic analysts, often pairing them in research teams. These sailors, scholars, analysts, industry experts, and other professionals have commanded ships at sea, led shipbuilding programs ashore, toured Chinese vessels and production facilities, invested in Chinese shipyards and advised others in their investment, and analyzed and presented important data to top-level decision-makers in times of crisis. In synthesizing their collective insights, the book fills a key gap in our understanding of China, its shipbuilding, its navy, and what it all means. Their findings will fascinate and concern you. While offering different perspectives, they largely agree on several important points. Through a process of "imitative innovation," China has been able to "leap frog" some naval development, engineering, and production

steps and achieve tremendous cost and time savings by leveraging work done by the U.S. and other countries. China's shipbuilding industry is poised to make the PLAN the second largest Navy in the world by 2020, and—if current trends continue—a combat fleet that in overall order of battle (i.e., hardware-specific terms) is quantitatively and even perhaps qualitatively on a par with that of the U.S. Navy by 2030. Already, Chinese ship-design and -building advances are helping the PLAN to contest sea control in a widening arc of the Western Pacific. China continues to lack transparency in important respects, but much is knowable through the interdisciplinary research approach pioneered by the Naval War College China Maritime Studies Institute in the series "Studies in Chinese Maritime Development," of which this is the sixth volume.

## **Chinese Naval Shipbuilding**

A variety of viewpoints is offered in this timely analysis of China's economy and the future shape of Beijing's energy consumption. The authors, all noted authorities in the fields of economics, diplomacy, energy, and defense, consider an unprecedented range of influences and factors to avoid the limitations of looking at the subject myopically or with political bias. They conclude that while energy insecurity could eventually lead to an arms race at sea or even a naval conflict that neither side wants, there is ample room for Sino-American energy dialogue and cooperation in the maritime domain.

## **Bridging Troubled Waters**

The South China Sea is a major strategic waterway for trade and oil shipments to Japan, Korea as well as southern China. It has been the focus of a maritime dispute which has continued now for over six decades, with competing claims from China, Vietnam, the Philippines, Indonesia and Brunei. Recently China has become more assertive in pressing its claims - harassing Vietnamese fishing vessels and seizing reefs in the Philippine claim zone. China has insisted that it has "indisputable sovereignty" over the area and has threatened to enforce its claim. All of this is unsettling and draws in the United States which is concerned about freedom of navigation in the area. The US has been supporting the Philippines and has been developing security ties with Vietnam as a check upon China. This book examines the conflict potential of the current dispute, it discusses how the main claimants and the United States view the issue, and assesses the prospects for a resolution of the problem.

## **Japan's Foreign Relations in Asia**

China has developed sophisticated hedging strategies to insure against risks in the international petroleum market. It has managed a growing net oil import gap and supply disruptions by maintaining a favorable energy mix, pursuing overseas equity oil production, building a state-owned tanker fleet and strategic petroleum reserve, establishing cross-border pipelines, and diversifying its energy resources and routes. Though it cannot be "secured," China's energy security can be "insured" by marrying government concern with commercial initiatives. This book comprehensively analyzes China's domestic, global, maritime, and continental

petroleum strategies and policies, establishing a new theoretical framework that captures the interrelationship between security and profit. Arguing that hedging is central to China's energy-security policy, this volume links government concerns about security of supply to energy companies' search for profits, and by drawing important distinctions between threats and risks, peacetime and wartime contingencies, and pipeline and seaborne energy-supply routes, the study shifts scholarly focus away from securing and toward insuring an adequate oil supply and from controlling toward managing any disruptions to the sea lines of communication. The book is the most detailed and accurate look to date at how China has hedged its energy bets and how its behavior fits a hedging pattern.

### **Chinese Grand Strategy and Maritime Power**

This book explores the very latest developments in the South China Sea maritime dispute. It examines the South China Sea as an arena for geostrategic competition between China and the United States and why the dispute is so important for regional and global geopolitics. It outlines the most recent developments in the sea itself and assesses the role of the Association of Southeast Asian Nations (ASEAN) and the current views of the contesting claimants. It considers the position of countries from outside the region, India as well as Japan; surveys military and naval developments; and examines confidence building, preventive diplomacy, and dispute resolution measures. The book concludes by highlighting the points of greatest risk and by discussing how the situation is likely to develop going forward.

### **China as a Sea Power, 1127-1368**

Selected by The New York Times Book Review as a Notable Book of the Year A revelatory tale of science, adventure, and modern myth. When the writer Donovan Hohn heard of the mysterious loss of thousands of bath toys at sea, he figured he would interview a few oceanographers, talk to a few beachcombers, and read up on Arctic science and geography. But questions can be like ocean currents: wade in too far, and they carry you away. Hohn's accidental odyssey pulls him into the secretive world of shipping conglomerates, the daring work of Arctic researchers, the lunatic risks of maverick sailors, and the shadowy world of Chinese toy factories. Moby-Duck is a journey into the heart of the sea and an adventure through science, myth, the global economy, and some of the worst weather imaginable. With each new discovery, Hohn learns of another loose thread, and with each successive chase, he comes closer to understanding where his castaway quarry comes from and where it goes. In the grand tradition of Tony Horwitz and David Quammen, Moby-Duck is a compulsively readable narrative of whimsy and curiosity.

### **Guangzhou - Heart of the South**

China's long-term maritime history has been overlooked by the scholarly world, creating a misconception that the Chinese were sea- or ocean-phobic. This image has been promoted rather deliberately because a sailing-averse China would fit in well with the non-capitalist development framework. This study shows that from 2100 B.C. to A.D. 1900, the Chinese were as enthusiastic about and capable of seagoing activities as other peoples. But maritime activities in China raise two paradoxes: these activities were incompatible with the agrarian dominance of the Chinese premodern economy, and there was a huge gap between Chinese maritime potential and maritime growth.

### **China's Maritime Gray Zone Operations**

"Maritime boundary disputes in the South China have existed for centuries and researchers from a variety of countries have analysed the situation from a great many points of view. Yet, and despite its status as one of the major countries in the region, Chinese perspectives have often been absent from the international literature. This book redresses that balance. Bringing together scholarship from History and International Law, this book provides a lens through which maritime territorial disputes in the South China Sea can be interrogated. Not only does it detail the historical and jurisprudential evidence that support maritime boundaries in the South China Sea for different stakeholders, but it also clarifies some misconceptions related to China's nine-dash lines by referring to the United Nations Convention on the Law of the Sea. Moreover, the book offers in-depth discussion and observation on the most recent developments in the South China Sea. This book is an essential resource for researchers, teachers and students who specialize in Southeast Asian Studies, China maritime studies, and the international law of the sea"--

## **China's Maritime Boundaries in the South China Sea**

Japan's Foreign Relations in Asia has been specifically designed to introduce students to Japan's foreign relations in Asia since 1990, a period in which there have been dramatic developments in Japan, including the reinterpretation of the Constitution and expanded US-Japan defence cooperation. The geopolitical dynamics and implications of these new developments are profound and underscore the need for a new textbook on this subject. Covering not only the key regional players of China and the Koreas, this textbook also encompasses chapters on Japan's relations with India, Myanmar, Indonesia, Vietnam, the Philippines and Thailand, along with its multilateral engagement and initiatives. Combined with transnational chapters on critical issues, key themes covered by this book include:

Maritime issues are particularly important for Asian countries, where there is a high reliance on shipping routes for international trade, many difficult disputes over maritime boundaries, and the prospect of increasing tensions where maritime power might play a significant role. This book uses contributions by 17 experts to build a comprehensive survey of the maritime issues affecting Asia. It discusses the issues overall, goes on to examine the issues from the perspective of each of 14 key countries, and concludes by assessing the prospects for resolving common problems in order to preserve good order at sea.

Contesting History is an authoritative guide to the positive and negative applications of the past in the public arena and what this signifies for the meaning of history more widely. Using a global, non-Western model, Jeremy Black examines the employment of history by the state, the media, the national collective memory and others and considers its fundamental significance in how we understand the past. Moving from public life pre-1400 to the struggle of ideologies in the 20th century and contemporary efforts to find meaning in historical narratives, Jeremy Black incorporates a great deal of original material on governmental, social and commercial influences on the public use of history. This includes a host of in-depth case studies from different periods of history around the world, and coverage of public history in a wider range of media, including TV and film. Readers are guided through this material by an expansive introduction, section headings, chapter conclusions and a selected further reading list. Written with eminent clarity and breadth of knowledge, Contesting History is a key text for all students of public history and anyone keen to know more about the nature of history as a discipline and concept.

## **Chinese Maritime Power in the 21st Century**

Lo Jung-pang argues that during each of the three periods when imperial China embarked on maritime enterprises (the Qin and Han dynasties, the Sui and early Tang dynasties, and Song, Yuan, and early Ming dynasties), coastal states took the initiative at a time when China was divided, maritime trade and exploration subsequently peaked when China was strong and unified, and declined as Chinese power weakened. At such times, China's people became absorbed by internal affairs, and state policy focused on threats from the north and the west. These cycles of maritime activity, each lasting roughly five hundred years, corresponded with cycles of cohesion and division, strength and weakness, prosperity and impoverishment, expansion and contraction. In the early 21st century, a strong and outward looking China is again building up its navy and seeking maritime dominance, with important implications for trade, diplomacy and naval affairs. Events will not necessarily follow the same course as in the past, but Lo Jung-pang's analysis suggests useful questions for the study of events as they unfold and decades to come.

## **Governance of Arctic Shipping**

A thrilling story of the Cold War, told by a former navy secretary on the basis of recently declassified documents. When Ronald Reagan took office in January 1981, the United States and NATO were losing the Cold War. The USSR had superiority in conventional weapons and manpower in Europe, and had embarked on a massive program to gain naval preeminence. But Reagan already had a plan to end the Cold War without armed conflict. Reagan led a bipartisan Congress to restore American command of the seas by building the navy back to six hundred major ships and fifteen aircraft carriers. He adopted a bold new strategy to deploy the growing fleet to northern waters around the periphery of the Soviet Union and demonstrate that the NATO fleet could sink Soviet submarines, defeat Soviet bomber and missile forces, and strike aggressively deep into the Soviet homeland if the USSR attacked NATO in Central Europe. New technology in radars, sensors, and electronic warfare made ghosts of American submarines and surface fleets. The United States proved that it could effectively operate carriers and aircraft in

the ice and storms of Arctic waters, which no other navy had attempted. The Soviets, suffocated by this naval strategy, were forced to bankrupt their economy trying to keep pace. Shortly thereafter the Berlin Wall fell, and the USSR disbanded. In *Oceans Ventured*, John Lehman reveals for the first time the untold story of the naval operations that played a major role in winning the Cold War.

## **The South China Sea Maritime Dispute**

Is naval conflict in the Asia-Pacific region becoming more likely? On the face of it, this seems likely; nearly all countries in the region are rapidly modernising their navies and expanding their maritime capabilities at a time of increasingly rancorous disputes over sovereignty. This is especially the case in the East and South China Seas, with their supply of fish and largely untapped resources in oil and gas. Across the region there is a growing recognition of the economic importance of the sea, both for its resources and for the crucial shipping it facilitates. But economic growth goes both ways, developing increasing interdependence between the countries of the region. Expanding trade is subject to serious threats from pirates, drug-smugglers and other forms of maritime crime, and navies and coastguards are coming together to combat them. Which will prevail, the tendency to compete, or the tendency to cooperate? In reviewing the maritime policies of the major countries of the region, this volume aims to answer this question.

## **Spirit of Love**

Sino-Japanese relations have been repeatedly strained by the territorial dispute over a group of small islands, known as the Senkaku islands in Japan and the Diaoyu islands in China. The rich fishing grounds, key shipping lanes, and perhaps especially, potentially rich oil deposits around the islands exacerbate this dispute in a confluence of resource pressures, growing nationalism, and rising military spending in the region. *Bridging Troubled Waters* reminds us that the tensions over the Senkaku/Diaoyu islands are only a part of a long history of both conflict and cooperation in maritime relations between Japan and China. James Manicom examines the cooperative history between China and Japan at sea and explains the conditions under which two rivals can manage disputes over issues such as territory, often correlated with war. China and Japan appear incapable of putting history behind them, are poised on the brink of a strategic rivalry, and seem at risk of falling into an unintentional war over disputed maritime claims. *Bridging Troubled Waters* challenges this view by offering a case-by-case analysis of how China and Japan have managed maritime tensions since the dispute erupted in 1970. The author advances an approach that offers a trade-off between the most important stakes in the disputed maritime area with a view to establishing a stable maritime order in the East China Sea. The book will be of interest to policymakers, academics, and regional specialists in Asia, security studies, and international conflict and cooperation.

## **Maritime Challenges and Priorities in Asia**

One hundred years before Columbus and his fellow Europeans began their voyages of discovery, fleets of giant junks commanded by the eunuch admiral Zheng He and filled with the empire's finest porcelains, lacquerware, and silk ventured to the world's "four corners." Seven epic expeditions brought China's treasure ships across the China Seas and Indian Ocean, from Japan to the spice island of Indonesia and the Malabar Coast of India, on to the rich ports of the Persian Gulf and down the East African coast, to China's "El Dorado," and perhaps even to Australia, three hundred years before Captain Cook's landing. It was a time of exploration and expansion, but it ended in a retrenchment so complete that less than a century later, it was a crime to go to sea in a multimasted ship. In *When China Ruled the Seas*, Louise Levathes takes a fascinating and unprecedented look at this dynamic period in China's enigmatic history, focusing on the country's rise as a naval power that briefly brought half the world under its nominal authority. Drawing on eyewitness accounts, official Ming histories, and African, Arab, and Indian sources, many translated for the first time, Levathes brings readers inside China's most illustrious scientific and technological era. She sheds new light on the historical and cultural context in which this great civilization thrived, as well as the perception of China by other contemporary cultures. Beautifully illustrated and engagingly written, *When China Ruled the Seas* is the fullest picture yet of the early Ming dynasty—the last flowering of Chinese culture before the Manchu invasion.

## **India-China Maritime Competition**

Maritime security is of vital importance to the South China Sea, a critical sea route for maritime transport of East Asian countries including China. The adjacent countries have rendered overlapping territorial and/or maritime claims in the South China Sea which complicate the situation of maintaining maritime security and developing regional cooperation there. This book focuses on contemporary maritime security in the South China Sea as well as its connected sea area, the Straits of Malacca and Singapore. It identifies and examines selected security issues concerning the safety of navigation, crackdown on transnational crimes including sea piracy and maritime terrorism, and conflict prevention and resolution. In the context of non-traditional security, issues such as maritime environmental security and search and rescue at sea are included. The book explores ways and means of international cooperation in dealing with these maritime security issues.

## **When China Ruled the Seas**

This volume challenges the "Walled Kingdom" perspective. China reached out to the seas far more actively than historians have allowed, while the maritime world shaped China, Qing China in particular, much more than the continental world. It gave birth to and defined Chinese modernity.

This book analyses China's maritime strategy for the 21st century, integrating strategic planning, policy thinking and strategic prediction. This book explains the construction and application of China's military, political, economic and diplomatic means for building maritime power, and predicts the future of China's maritime power by 2049, as well as development trends in global maritime politics. It explores both the strengths and the limitations of President Xi's 'Maritime Dream' and provides a candid assessment of the likely future balance at sea between China and the United States. This volume explains and discusses China's claims and intentions in the East and South China Seas and makes some recommendations for China's future policy that will lessen the chance of conflict with the United States and its closer neighbors. This book will be of much interest to students of maritime strategy, naval studies, Chinese politics and International Relations in general.

### **The South China Sea**

Challenging the stereotype of premodern China as an agricultural nation, this book examines the development of the maritime sector, maritime institutions, and sea power in the premodern era. Initially discussing topics related to China's exports, such as ship design and construction, goods produced for export, and investment in the maritime sector, the work goes on to consider the impact of maritime institutions. It then shows how China obtained technological, economic, and naval supremacy in Asian waters until the 18th century and discusses the reasons for its decline in the 19th century.

### **Red Star Over the Pacific**

This edited volume critically examines the concept of the "security dilemma" and applies it to India-China maritime competition. Though frequently employed in academic discussion and popular commentary on the Sino-Indian relationship, the term has rarely been critically analysed. The volume addresses the gap by examining whether the security dilemma is a useful concept in explaining the naval and foreign policy strategies of India and China. China's Belt and Road Initiative and its expansive engagement in the Indian Ocean Region have resulted in India significantly scaling up investment in its navy, adding ships, naval aircraft and submarines. This volume investigates how the rivalry is playing out in different sub-regions of the Indian Ocean, and the responses of other powers, notably the United States and prominent Southeast Asian states. Their reactions to the Sino-Indian rivalry are an underexplored topic and the chapters in this book reveal how they selectively use that rivalry while trying to steer clear of making definite choices. The book concludes with recommendations on mitigating the security dilemma. This work will be of great interest to students of strategic studies, international relations, maritime security, and Asian politics.

### **A Message from the Sea**

Two associate professors of strategy at the Naval War College assess how the rise of Chinese sea power will affect the United States maritime strategy in Asia and discuss the sea-power theories of Alfred Thayer Mahan, now popular in China.

### **China's Energy Strategy**

China's turn toward the sea is evident in its stunning rise in global shipbuilding markets, its expanding merchant marine, its wide reach of offshore energy exploration, its growing fishing fleet, and its increasingly modern navy. This comprehensive assessment of China's potential as a genuine maritime power is both unbiased and apolitical. Unlike other works that view China in isolation, it places China in a larger world historical context. The authors, all authorities on their historical eras, examine cases of attempted maritime transformation through the ages, from the Persian Empire to the Soviet Union, and determine the reasons

for success or failure.

## **The South China Sea Maritime Dispute**

China's rise on the world's oceans is attracting wide attention and may ultimately restructure the global balance of power during the course of the 21st century. Many books have described this phenomenon and the significant strategic implications that flow from Beijing's rapid maritime development. However, the subject of whether and how to potentially integrate a stronger China into a global maritime security partnership has not been adequately explored. Delving into a variety of vital domains of contemporary maritime security, American and Chinese contributors to this edited volume illustrate that despite recent turbulence in U.S.-China military relations, substantial shared interests should enable extensive maritime security cooperation. But for professionals to structure cooperation effectively, they warn, Washington and Beijing must create sufficient political and institutional space.

## **Chinese Politics in the Xi Jinping Era**

Merthyr Tydfil in 1844 is a frontier town on the cutting edge of the industrial revolution where wealth and crime walk hand in hand. Introduced just a few years earlier, the Glamorgan Constabulary fight to take control of this hard town by fair means or foul. Working in this violent world Sergeant Ephraim Jones uncovers three murders that link power to the towns most famous of slums, China. Operating outside of the authority of his bosses Ephraim Jones seeks to bring the killer to justice. In 2013 Sergeant Angharad Jones, the latest descendent of Ephraim Jones, finds herself cast adrift into modern Merthyr Tydfil a town that still bares the social scars of its 19th Century development. As people start to die, Angharad realises that there is a familiarity in the tale of her ancestor. Calling on the assistance of her grandfather, Angharad searches for the truth. Can she finally solve the great mystery of Merthyr Tydfil and save her career in the process? Calling on the legends of the town the Ghosts of China is a modern day crime story that brings to life the historical Merthyr Tydfil. In doing so it delivers a quirky and South Wales valleys inspired take on the Police Procedural.
