Tatiana Bilbao: Perspectives

The text describes the main features of currently available heat pumps, focusing on system operation and interactions with external heat sources. In fact, before choosing a heat pump, several aspects must be assessed in detail: the actual climate of the installation site, the building's energy requirements, the heating system, the type of operation etc. After discussing the general working principles, the book describes the main components of compression machines – for EHPs, GHPs and CO₂ heat pumps. It then addresses absorption heat pumps and provides additional details on the behavior of two-fluid mixtures. The book presents a performance comparison for the different types, helping designers choose the right one for their needs, and discusses the main refrigerants. Notes on helpful additional literature, websites and videos, also concerning relevant European regulations, round out the coverage. This book will be of interest to all engineers and technicians whose work involves heat pumps. It will also benefit students in energy engineering degree programs who want to deepen their understanding of heat pumps.

'Ambitious, defiant, angry and gripping . . . the bitter story of slavery through the experience of four women' Guardian
'Jackie Kay's work, formally expansive and inclusive . . . is always about the opening up of our notions of identity' Ali Smith, author of *How to Be Both*
In *The Lamplighter*, award-winning poet and Scottish Makar Jackie Kay takes us on a journey into the dark heart of Britain's legacy in the slave trade. First produced as a play, on the page it reads as a profound and tragic multi-layered poem. We watch as four women and one man tell the story of their lives through slavery, from the fort, to the slave ship, through the middle passage, following life on the plantations, charting the growth of the British city and the industrial revolution. Constance has witnessed the sale of her own child; Mary has been beaten to an inch of her life; Black Harriot has been forced to sell her body; and our lead, the Lamplighter, was sold twice into slavery from the ports in Bristol. Their different voices sing together in a rousing chorus that speaks to the experiences of all those brutalised by slavery, and lifts in the end to a soaring and powerful conclusion. Stirring, impassioned and deeply affecting, *The Lamplighter* remains as essential today as the day it was first performed. This is an essential work by one of our most beloved writers.

Mario Botta believes that 'architecture is an ethical discipline before it is an aesthetic one'. By this principle he decided which architectural works should be featured in this superb edition of the Pro Architect series: he chose the house or home because it represents humankind's primary need for shelter; the museum for its sense of community; the commercial center for its meaning as a workplace; and the church because it focuses on the need for spirituality. In Botta's own words "architecture and the organization of mankind's living space still represent the formal expression of history." Includes SFMOMA; Cathedral in Evry, France; Municipal Library, Dortmund, Germany; Swisscom Center in Ticino, Switzerland; and many more.

Gasoline Engine with Direct Injection

Direct injection spark-ignition engines are becoming increasingly important, and their potential is still to be fully exploited. Increased power and torque coupled with further reductions in fuel consumption and emissions will be the clear trend for future developments. From today's perspective, the key technologies driving this development will be new fuel injection and combustion processes. The book presents the latest developments, illustrates and evaluates engine concepts such as downsizing and describes the requirements that have to be met by materials and operating fluids. The outlook at the end of the book discusses whether future spark-ignition engines will achieve the same level as diesel engines.

The Cathedral and Others Poems

Thermodynamic Properties in SI

Featuring case studies from the industrial and tourism sectors, this book provides an interdisciplinary perspective on the effect of total quality management on business and innovation strategies. The principles of Total Quality Management (TQM) have been widely researched and analyzed as an essential tool for businesses to compete in a globalized economy. This book presents the latest research on the applications of TQM across different functions such as customer service, human resources management and cost control. It demonstrates how the utilization of TQM tools, such as the SERVQUAL model, Eco-Management and Audit Scheme (EMAS), High Involvement Practices (HIWP) and the EFQM excellence model, impacts a firm's performance, enhances productivity and innovation and reduces cost, thereby allowing them to compete more effectively in the global market. Building on the extensive literature on the relationship between TQM and business performance, the authors argue that quality acts as a powerful competitive tool that companies should embrace in their corporate strategy. By promoting activities that result in greater efficiency, improved control and management of the organization (internal quality), firms can achieve significant improvement in customer satisfaction, employee satisfaction, social impact and business results (external quality) and exceed expectations in these areas.
