How did the United States, a nation known for protecting the "right to remain silent" become notorious for condoning and using controversial tactics like water boarding and extraordinary rendition to extract information? What forces determine the laws that define acceptable interrogation techniques and how do they shift so quickly from one extreme to another? In Confessions of Guilt, esteemed scholars George C. Thomas III and Richard A. Leo tell the story of how, over the centuries, the law of interrogation has moved from indifference about extreme force to concern over the slightest pressure, and back

again. The history of interrogation in the Anglo-American world, they reveal, has been a swinging pendulum rather than a gradual continuum of violence. Exploring a realist explanation of this pattern, Thomas and Leo demonstrate that the law of interrogation and the process of its enforcement are both inherently unstable and highly dependent on the perceived levels of threat felt by a society. Laws react to fear, they argue, and none more so than those that govern the treatment of suspected criminals. From England of the late eighteenth century to America at the dawn of the twenty-first, *Confessions of Guilt* traces the disturbing yet fascinating history of interrogation practices, new and old, and the laws that govern them. Thomas and Leo expertly explain the social dynamics that underpin the continual transformation of interrogation law and practice and look critically forward to what their future might hold.

The Asian Summer Monsoon: Characteristics, Variability, Teleconnections and Projection focuses on the connections between the Indian Summer and East Asian Summer Monsoons, also including the South China Sea Summer Monsoon. While these systems have profound differences, their interactions have significant impacts on the climatic regimes in the region and throughout the world. In summer, the ASM engine pumps moisture transported across thousands of miles from the Indian and Pacific Oceans to the monsoon regions, producing heavy rains over south and east Asia and its adjacent marginal seas. This book reviews the different subsystems and their impact, providing guidance to enhance prediction models. Synthesizes the connections between the East Asian Summer Monsoon, the Indian Summer Monsoon and the Asian Summer Monsoon system Includes subsections on holistic characteristics, sub-seasonal and interannual variability, teleconnection patterns, and projections of future change Connects current theory and practice on Asian Monsoon forecasting, providing researchers with new skills and information to use in climate and weather forecasting

Taxation is a discipline that does not receive sufficient academic attention. It is typically viewed as a subset of law, accounting, public policy, economics, or finance. In this respect, most academic efforts in the field of taxation are shadowed by a mother discipline. There is currently an unprecedented need to approach tax pedagogy in a way that is independent of another discipline. This book caters to that real and unmet need in tax pedagogy. One of the book's advantages is that it is not tied to a specific tax year and does not coddle the reader with volumes of time-sensitive information. In this book the tax year is never the focus, as the center stage is reserved for teaching the principles and skills necessary to independently find answers. The reader will learn to appreciate the complexity of the American tax system and will be endowed with the contextual understanding necessary to formulate educated opinions about how taxes work and, most importantly, why. Contrary to common belief, taxation in the United States has remained fairly stable for the last 100 years. This book uses the federal individual income tax as a vehicle to unveil the mechanics that make up the American tax system. This book is essential reading for students taking a first course in taxation, at the undergraduate or graduate level, as part of programs in accounting, law, public administration, or business at large.
