Over the last 10 years advances in the new field of neuromarketing have yielded a host of findings which defy common stereotypes about consumer behavior. Reason and emotions do not necessarily appear as opposing forces. Rather, they complement one another. Hence, it reveals that consumers utilize mental accounting processes different from those assumed in marketers' logical inferences when it comes to time, problems with rating and choosing, and in post-purchase evaluation. People are often guided by illusions not only when they perceive the outside world but also when planning their actions - and consumer behavior is no exception. Strengthening the control over their own desires and the ability to navigate the maze of data are crucial skills consumers can gain to benefit themselves, marketers and the public. Understanding the mind of the consumer is the hardest task faced by business researchers. This book presents the first analytical perspective on the brain - and biometric studies which open a new frontier in market research.

### **Oxford Handbook of Palliative Care**

The seventh edition of the Palliative Care Formulary (PCF), a Pharmaceutical Press product from the Royal Pharmaceutical Society, is an essential resource for healthcare professionals who care for patients with progressive end-stage disease. Although written primarily with cancer patients in mind, PCF7 contains specific material relating to several other life-limiting diseases e.g. COPD, congestive heart failure, renal and hepatic failure, and Parkinson's disease. PCF7 also includes several Quick Clinical Guides covering key topics in palliative care and designed for everyday use. Grounded in clinical practice, this comprehensive title includes independent information about drugs used in palliative care, highlighting off-label indications or routes, and dealing with the administration of multiple drugs by continuous subcutaneous infusion. Features: - Two new monographs to reflect increasing use in practice, Denosumab and Parecoxib - Hepatic chapter fully revised by a multidisciplinary working group - Cannabinoids monograph fully updated and including the 2019 NICE guidance - Anticoagulants monograph fully updated to include a brand new table with prescribing guidance for Direct Oral Anticoagulants (DOACs) - Opioid antagonists outside the CNS fully reviewed to reflect the latest products and evidence for use - Urinary antimuscarinics, a new combined monograph to reflect the increasing use of other drugs in this category From the reviews of previous editions 'PCF [is] a core text for the speciality and has no serious rivals.' Palliative Medicine 'The information is up to date and prepared with extreme care. This handbook should be available to staff involved with inpatient consultation, inpatient units of care and home visits.' Journal of Pain and Symptom Management 'First class. Highly recommended.' The U.S. hospital embodies society's hope for itself—a technological bastion standing between us and death. What does the gold standard of rescue, as ideology and industry, mean for the dying patient in the hospital and for the status of dying in American culture? This book shows how dying is a management problem for hospitals, occupying space but few billable encounters and of little interest to medical practice or quality control. An anthropologist and bioethicist with two decades of professional nursing experience, Helen Chapple goes beyond current work on hospital care to present fine-grained accounts of the clinicians, patients, and families who navigate this uncharted, untidy, and unpredictable territory between the highly choreographed project of rescue and the clinical culmination of death. This book and its important social and policy implications make key contributions to the social science of medicine, nursing, hospital

administration, and health care delivery fields.

## **The Girls' Weekend Murder**

Adult neuropsychiatry is now a well-established field with numerous reputable references. Practitioners who work with children routinely note how references and practitioners knowledgeable in the equivalent work in the pediatric world are rare. Child psychiatrists and neurologists frequently work with individuals struggling with these conditions and would strongly benefit from such a reference that incorporates medical work-up, psychopharmacological recommendations, family/support recommendations and theoretical pathophysiology. Pediatricians and developmental pediatricians often treat children with behavioral and neuropsychiatric sequelae, but are not well-trained in the neuropsychiatric management of these cases. Neuropsychologists and educational psychologists working with children and adults with pediatric-onset conditions will also find the text helpful to contextualize their cases, better-understand the medical evaluation and management and perhaps adjust recommendations that would supplement their own testing methods. Finally, sub-specialists in adult neurology, psychiatry and neuropsychiatry often find themselves working with these children by default as there are few pediatric subspecialists who are available to accept them into practice. When facing complex neuropsychiatric illness in children, many clinicians are stymied because they may have “never seen a case like that”. This text fills the wide gap that currently exists and helps move this field forward. The approach utilized in adult neuropsychiatry that is both clear and accessible does not yet have an equivalent in the pediatric realm, but there is tremendous interest in its development. Children and adolescents with neuropsychiatric conditions are very common and they and their caregivers often struggle to find professionals well educated in this field. Ultimately, a wide range of clinicians will find this text to be a very helpful resource for diagnosis and management in the spectrum of pediatric neuropsychiatric conditions. The case-based approach is also unique with respect to neuropsychiatric approaches, and the clear cut, reader-friendly approach of such a format would likely be well-received among physicians looking for a resource on this issue.

Now updated and expanded to cover the latest technologies, this full-color text on clinical refraction uses an easy-to-read format to give optometry students and practitioners all the important information they need. Also covers a wide range of other aspects of the eye exam, including anterior and posterior segment evaluations, contact lens, ocular pharmacology, and visual field analysis. Four new chapters cover wavefront-guided refraction, optical correction with refractive surgeries, prosthetic devices, and patients with ocular pathology. Offer precise, step-by-step how-to's for performing all of the most effective refractive techniques. Presents individualized refractive approaches for the full range of patients, including special patient populations. Contributors are internationally recognized, leading authorities in the field. New full-color design with full-color images throughout. Completely updated and expanded to include current technologies. A new chapter on Optical Correction with Refractive Surgeries, including keratoplasty, traditional refractive surgeries (e.g. LASIK and PRK), crystalline lens extraction with and without pseudophakia, the new presbyopic surgery, etc. A new chapter on Wavefront Guided Refraction provides information on the advantages and limitations the Hartmann-Shack Method for objective refraction plus aberrometry and the refraction and the use of in the correction of the eye with spectacles, contact lenses, and refractive surgery. A new chapter on Patients with Ocular Pathology reflects the most current knowledge of patients with ocular pathologies. Provides information on Optical Correction with Prosthetic Devices, including corneal onlays, stromal implants, phakic intraocular lenses, etc. Includes new chapters and/or discussions on such topics as: Aberrations of the Eye, Refractive Consequences of Eye Pathology, Diagnosis and Treatment of Dry Eye, Diagnosis of Pathology of the Anterior Segment, Diagnosis of Glaucoma, and Diagnosis of Pathology of the Posterior Segment. Visual Acuity chapter expanded to include the effect of refractive error on visual acuity and statistics on how much of a change in visual acuity is significant. Objective Refraction, Corneal Topography, and Visual Field Analysis chapters include the addition of new electro-optical and computer techniques and equipment. Chapters on Multifocal Spectacle Lenses and Contact Lenses now cover newer progressive addition lenses and contact lenses that are now on the market. Electrodiagnosis chapter revised to take a more clinical approach.

## **Hospice and Palliative Medicine Handbook**

This comprehensive pocket-size handbook is the essential reference for clinicians and others serving patients with advanced or life-limiting illness. It offers up-to-

date, relevant, and highly practical guidance to expertly meet the challenges of serving these patients and their families. This user-friendly manual emphasizes the importance of honoring patients' wishes throughout their medical journey while meeting their whole-person, often complex needs—from symptom management to attending to spiritual and emotional suffering—and always acknowledges the context of patients' lives, including the needs of loved ones supporting them. The layout makes finding information quick and easy, with alphabetically organized chapter headings and a detailed index. Organ-system-based chapters offer disease-specific, goals-of-care discussion guidance and reviews of etiology, signs and symptoms, assessment, and management—including standard treatment as well as palliative options. Other chapters cover communication with patients and families, consultation with colleagues, and code status discussions, along with valuable subjects such as withdrawing life support, ethics, spirituality, physician-assisted death, and palliative options of last resort. Readers will find practical management strategies for symptoms such as pain, nausea, dyspnea, and delirium. In addition, chapters on opioid use and dosing, and pharmacology of commonly used palliative medications, make this guide an invaluable resource.

Allan Bloom's sweeping analysis is essential to understanding America today. It has fired the imagination of a public ripe for change.

### **Textbook of Palliative Medicine**

This is the fifth edition of a well-established textbook. It is intended to provide a thorough coverage of the fundamental principles and techniques of classical mechanics, an old subject that is at the base of all of physics, but in which there has also in recent years been rapid development. The book is aimed at undergraduate students of physics and applied mathematics. It emphasizes the basic principles, and aims to progress rapidly to the point of being able to handle physically and mathematically interesting problems, without getting bogged down in excessive formalism. Lagrangian methods are introduced at a relatively early stage, to get students to appreciate their use in simple contexts. Later chapters use Lagrangian and Hamiltonian methods extensively, but in a way that aims to be accessible to undergraduates, while including modern developments at the appropriate level of detail. The subject has been developed considerably recently while retaining a truly central role for all students of physics and applied mathematics. This edition retains all the main features of the fourth edition, including the two chapters on geometry of dynamical systems and on order and chaos, and the new appendices on conics and on dynamical systems near a critical point. The material has been somewhat expanded, in particular to contrast continuous and discrete behaviours. A further appendix has been added on routes to chaos (period-doubling) and related discrete maps. The new edition has also been revised to give more emphasis to specific examples worked out in detail. Classical Mechanics is written for undergraduate students of physics or applied mathematics. It assumes some basic prior knowledge of the fundamental concepts and reasonable familiarity with elementary differential and integral calculus.

Ultrasound has revolutionized a physician's ability to make urgent and emergent diagnoses at the bedside, and has changed the management of many acute injuries and conditions. This is a practical, concise introduction to what is rapidly becoming an essential tool for all critical care physicians: bedside emergency ultrasound. The Manual covers the full spectrum of conditions diagnosed using ultrasound and gives practical guidance in how to use ultrasound for common invasive procedures. Major applications are introduced using focused diagnostic questions and reviewing the image-acquisition skills needed to answer them. Images of positive and negative findings are presented, and scanning tips for improving image quality. The second edition has been substantially revised and expanded, with new images, updated literature reviews, new applications and clinical algorithms. New chapters cover additional procedures, musculoskeletal and pediatric applications, and the use of ultrasound in resuscitation. This text is invaluable for emergency physicians at all levels.

### **Handbook of Drug Administration via Enteral Feeding Tubes, 3rd edition**

Now in its third edition, this landmark textbook has become the key resource for all nurses working in the field of palliative care. Edited by renowned nursing experts Betty Ferrell and Nessa Coyle and written by a dynamic team of internationally known authorities in nursing and palliative medicine, the book contains 78 chapters which cover the gamut of the palliative nursing world. The volume's scope is broad to incorporate principles of care from the time of the initial diagnosis of a terminal disease to the end of a patient's life and beyond. This text is distinctively developed to highlight the nurse's vital role as part of an integrated palliative care team. Various care settings are discussed including the hospital, ICU, home care, and hospice settings. While the book does provide some information on disease and pathophysiology when appropriate, the chapters focus on the practical aspects of nursing care, including symptom assessment, patient teaching, family support, psychosocial aspects of palliation, and spiritual care. All of the chapters have been completely updated and reorganized to incorporate new research and emerging models of care. This updated volume includes over 10 new chapters, including an extensively update section on international models of palliative care. In addition, there are many new ethics discussions covering a range of topics from pediatric palliative care to the withdrawal of life sustaining treatment. The text is authoritative and fully evidence-based, without ever losing sight of the humanity and sensitivity necessary in palliative nursing.

## **No Place For Dying**

Physicians who care for patients with life-threatening illnesses face daunting communication challenges. Patients and family members can react to difficult news with sadness, distress, anger, or denial. This book defines the specific communication tasks involved in talking with patients with life-threatening illnesses and their families. Topics include delivering bad news, transition to palliative care, discussing goals of advance-care planning and do-not-resuscitate orders, existential and spiritual issues, family conferences, medical futility, and other conflicts at the end of life. Drs Anthony Back, Robert Arnold, and James Tulsky bring together empirical research as well as their own experience to provide a roadmap through difficult conversations about life-threatening issues. The book offers both a theoretical framework and practical conversational tools that the practising physician and clinician can use to improve communication skills, increase satisfaction, and protect themselves from burnout.

## **Palliative Care Consultant**

This handbook provides an easily navigable source of information about the day-to-day management of patients requiring palliative and hospice care. Succinct, evidence-based, topically focused content is supplemented by extensive tables and algorithms. The table of contents and balance of coverage follows the core curriculum of the American Board of Hospice and Palliative Medicine, thus meeting the educational and clinical information needs of students, residents, fellows, and nurse practitioners. An expert team of clinicians, led by world renowned Eduardo Bruera, address approach to care; psychosocial and spiritual issues; impending death; grief and bereavement; assessment and management of pain; management of non-pain symptoms such as nausea, dyspnea, depression, insomnia, and bleeding; communication and team work; and ethical and legal decision making.

## **The Speculative Turn**

Continental philosophy has entered a new period of ferment. The long deconstructionist era was followed with a period dominated by Deleuze, which has in turn evolved into a new situation still difficult to define. However, one common thread running through the new brand of continental positions is a renewed attention to materialist and realist options in philosophy. Among the leaders of the established generation, this new focus takes numerous forms. It might be hard to find many shared positions in the writings of Badiou, DeLanda, Laruelle, Latour, Stengers, and i ek, but what is missing from their positions is an obsession with the critique of written texts. All of them elaborate a positive ontology, despite the

incompatibility of their results. Meanwhile, the new generation of continental thinkers is pushing these trends still further, as seen in currents ranging from transcendental materialism to the London-based speculative realism movement to new revivals of Derrida. As indicated by the title *The Speculative Turn*, the new currents of continental philosophy depart from the text-centered hermeneutic models of the past and engage in daring speculations about the nature of reality itself. This anthology assembles authors, of several generations and numerous nationalities, who will be at the centre of debate in continental philosophy for decades to come."

## **Classical Mechanics**

Over two previous editions, *Exploring Anatomy & Physiology in the Laboratory* (EAPL) has become one of the best-selling A&P lab manuals on the market. Its unique, straightforward, practical, activity-based approach to the study of anatomy and physiology in the laboratory has proven to be an effective approach for students nationwide. This comprehensive, beautifully illustrated, and affordably priced manual is appropriate for a two-semester anatomy and physiology laboratory course. Through focused activities and by eliminating redundant exposition and artwork found in most primary textbooks, this manual complements the lecture material and serves as an efficient and effective tool for learning in the lab.

## **Palliative Care Formulary**

Have you ever wondered if you calculated your patient's dosage correctly? Against a backdrop of the growing scrutiny of appropriate dosages, this textbook takes a fresh, new approach to helping health professionals strengthen care to and possibly save the lives of patients living with pain. This easy-to-understand and often humorous book is the most comprehensive to-date on opioid calculations for pain management and palliative care. It carefully walks clinicians through a five-step process for performing opioid conversion calculations in the real-world situations they often see. The book has case examples, simple charts and tables, and practice problems throughout on topics such as:

- difficult conversions for methadone, fentanyl, PCA, and neuraxial opioid therapy
- conversions between routes and dosage formulations of the same opioids and different opioids
- titrating opioid dosages up and down to include dosage change and timing
- calculating doses for rescue opioid therapy

Written by pain management expert Dr. Mary Lynn McPherson, the book gives helpful tips that practitioners should incorporate into their practices. It is a must for clinicians at all levels: hospice and palliative care physicians, physician's assistants, nurses, nurse practitioners, and pharmacists. Clinicians will come away with more confidence in doing the calculations, and higher service levels from the improvement in care.

## **Handbook of Methadone Prescribing and Buprenorphine Therapy**

"Evidence-Based Practice of Palliative Medicine" is the only book that uses a practical, question-and-answer approach to address evidence-based decision

making in palliative medicine. Dr. Nathan E. Goldstein and Dr. R. Sean Morrison equip you to evaluate the available evidence alongside of current practice guidelines, so you can provide optimal care for patients and families who are dealing with serious illness.

## **The Clinical Pocket Guide to Advanced Practice Palliative Nursing**

Methadone and buprenorphine are the only two opioids that are indicated for the management of both pain and opioid-related drug addiction. Both present unique challenges to the general practitioner and pain specialist, requiring a separate analysis from the rest of the drugs in the same family. Handbook of Methadone Prescribing and Buprenorphine Therapy is an invaluable guide to the safe use of these opioids. Authored by clinical and academic leaders from a variety of settings and backgrounds, this book includes chapters on pharmacology, adverse effects, safe rotation from other opioids, cardiac toxicity, prescribing, pharmacokinetics, equianalgesic dose and replacement therapy. This comprehensive text provides clinicians, researchers, policy-makers and academicians a resource for all the relevant points in methadone prescribing and buprenorphine therapy.
