Tattooing breaches the skin and can, therefore, cause a variety of complications. This book covers the full spectrum of issues clinical practitioners may encounter when treating affected patients. Introductory chapters include educational information on methods for tattooing, types of tattoos, tattoo inks, and tattoo ink toxicology. The focus is on the diagnosis and classification of tattoo complications. In this regard, a comprehensive atlas of acute and chronic complications serves as a valuable tool. Further chapters summarize available therapies, their rationale, and indication. This includes various medical and surgical treatments with a review of dermatome shaving. Lastly, tattoo removal by gold standard YAG lasers and the more recent pico-second lasers is discussed with the optimal therapeutic outcome in mind.

Diabetes in Clinical Practice

Body piercings, tattoos, and permanent make-up have become very popular as a fashion statement in recent decades. This book guides the reader through the world of body art. An overview is first provided of the history and epidemiology of tattoos and piercings. Subsequent chapters go on to examine in detail the materials and devices used in various forms of body art, and the techniques employed. All relevant risks and potential complications are clearly described with the aid of color illustrations. Special attention is paid to allergic reactions and the management of complications. The closing chapter examines the techniques and

With about 10–20% of the adult population in Europe being tattooed, there is a strong demand for publications discussing the various issues related to tattooed skin and health. Until now, only a few scientific studies on tattooing have been published. This book discusses different aspects of the various medical risks associated with tattoos, such as allergic reactions from red tattoos, papulo-nodular reactions from black tattoos as well as technical and psycho-social complications, in addition to bacterial and viral infections. Further sections are dedicated to the composition of tattoo inks, and a case is made for the urgent introduction of national and international regulations. Distinguished authors, all specialists in their particular fields, have contributed to this publication which provides a comprehensive view of the health implications associated with tattooing. The book covers a broad range of topics that will be of interest to clinicians and nursing staff, toxicologists and regulators as well as laser surgeons who often face the challenge of having to remove tattoos, professional tattooists and producers of tattoo ink.

covers the practical application and scientific background for a wide variety of chemical peels. The book reflects the new classification of peels as a medical, rather than cosmetic, treatment and helps providers by making chemical peel formulas easier, safer, and quicker to use. The book covers the appropriate selection of peels to treat the face, scalp, neck, hands, body, and forearms. It also discusses the use of peels to treat aging skin, stretch marks, scars, melasma, chloasma, acne, postinflammatory hyperpigmentation, and scalp keratoses. The mechanism of action, indication, application, and results are discussed for a variety of chemical peels including alpha hydroxy acids, trichloroacetic acid, salicylic acid, resorcinol, and phenols. Also covered are any contraindications, precautions, and safety issues. This edition includes new material on adjunctive procedures such as microneedling and mesotherapy as well as new information on mosaic peels. Treatment prior to and following the peel are also discussed in detail, and a full chapter is devoted to discussing complications associated with chemical peels. The book incorporates color clinical photographs throughout as well as descriptive tables summarizing key information. Based on the author's extensive experience in both research and practice, this updated reference is an invaluable guide to all providers involved with chemical peel treatments.

Radiofrequency (RF) has been used in many areas of medicine for some time, but only gained popularity in aesthetics in the early 2000s. Although initial procedures provided variable results, the field of RF has grown dramatically. Currently, a multitude of devices which offer an array of technologies, each geared to specific applications, are on the market. In this book, a comprehensive discussion of the evolving area of RF is provided, and the current and cutting-edge technologies which span from noninvasive treatments of facial wrinkles to invasive body contouring procedures are discussed in detail. The methodologies covered include

Originally published in 2010, this book has since become one of the seminal works in the rapidly evolving field of body piercings, tattoos, and permanent make-up. Authorities, body art professionals, and the general public have become increasingly aware of the risks associated with these practices and the need for better regulation. This second, extensively revised edition includes an update on the literature and focuses more on the epidemiology and classification of adverse reactions. In particular, it addresses recent findings on tattoo inks, their potential side effects and the initiatives being launched by regulating authorities to reduce the risks related to body art. Dermatologic Complications with Body Art details tattooing procedures in line with the coming European Standards on hygiene (CEN 435 in preparation-release 2018-2019) with extra attention to aftercare. The book features step-by-step video illustrations of different body-art procedures (tattooing, medical tattooing, piercing, and laser tattoo removal). Innovations including medical applications of tattooing are presented. Possible complications, including infections, granulomatous reactions, and allergies are discussed, while new insights on the pathogenesis of allergic reactions are illustrated with the help of recent research data. The book also presents the latest techniques and devices for tattoo removal, together with their risks and benefits. Richly illustrated with videos and pictures, it offers an indispensable guide for dermatologists, physicians and practitioners dealing with body art.

The Art of Aesthetic Surgery, Three Volume Set, Third Edition

With about 10–20% of the adult population in Europe being tattooed, there is a strong demand for publications discussing the various issues related to tattooed skin and health. Until now, only a few scientific studies on tattooing have been published. This book discusses different aspects of the various medical risks associated with tattoos, such as allergic reactions from red tattoos, papulo-nodular reactions from black tattoos as well as technical and psycho-social complications, in addition to bacterial and viral infections. Further sections are dedicated to the composition of tattoo inks, and a case is made for the urgent introduction of national and international regulations. Distinguished authors, all specialists in their particular fields, have contributed to this publication which provides a comprehensive view of the health implications associated with tattooing. The book covers a broad range of topics that will be of interest to clinicians and nursing staff, toxicologists and regulators as well as laser surgeons who often face the challenge of having to remove tattoos, professional tattooists and producers of tattoo ink.
