Now in its Seventh Edition, this pocket guide is a compact, portable, easy-to-use reference for dosage calculation and drug administration. The author uses a step-by-step approach with frequent examples to illustrate problem-solving and practical applications. Coverage includes review of mathematics, measurement systems, and a comprehensive section on dosage calculations. Practice problems throughout the text and end-of-chapter and end-of-unit review questions will aid students' application and recall of material. A handy pull-out card contains basic equivalents, conversion factors, and math formulas.

## **Dosage Calculations in SI Units**

Dosage Calculations, is the best-selling Dosage Calculation text in the Canadian market. This has been designed to help students or professionals who feel uncomfortable with mathematics and want to improve their ability to perform accurate drug dosage calculations. It features a three-step approach to basic and advanced Formula Method calculations that nursing and other health care professionals prefer, along with a reader-friendly writing style and handy "work text" format. Color photos of actual medication labels and full-size syringes add realistic dimension to the readings, while the MindTap online resource provides tutorials, animations, gradable homework and more than 1,000 extra practice problems to help readers test their knowledge of the material.

## **Dosage Calculations**

Nursing knowledge and practice is a comprehensive textbook which forms an ideal basis for foundation nursing students. The core emphasis in the organisation and presentation of knowledge in this third edition remains focused on the in-depth knowledge required by nurses to deliver care in the practice setting. The chapter contents encompass knowledge that applies to all branches of nursing e.g. Communication, Confusion, Aggression and Rehabilitation Safety and Risk, Infection Control, Medicines etc. The structure of all chapters is unique in integrating knowledge from subject areas often taught separately in the nursing curriculum. This enables the foundation student to integrate this range of knowledge in making decisions about the delivery of nursing care to patients/clients in all fields of nursing. Exercises are included to encourage reflection on practice and develop critical thinking skills. It also promotes the expansion of professional knowledge through the development of portfolio evidence. Building on the outstanding success of previous editions the authors have drawn extensively on current best evidence, including research, policy and substantial internet based resources, reflecting UK and international perspectives.

- Each chapter begins with an overview of the content and concludes with a summary to help evaluate learning
- Case studies reflect the diverse range of client needs and care settings of the four nursing branches and help relate theory to practice
- Reflective exercises and suggestions for portfolio evidence, along with decision-making activities, promote reflection on personal experience and links to nursing practice using a problem-based approach
- Current research is highlighted throughout, demonstrating the evidence-base for practice decisions.
- Key web sites, annotated further reading and references encourage readers to pursue contemporary evidence that underpins competency-based practice. Full colour throughout Content fully updated in line with developments in clinical practice, teaching requirements and the evidence-base Free electronic ancillaries on Evolve enhance the knowledge provided in each chapter with additional information,

Trust this market leading ratio and proportion text ! Drug Calculations: Ratio and Proportion Problems for Clinical Practice, 11th Edition is known for its realistic practice problems and unique proof step in the answer key that lets you double-check your answers to avoid medication errors. Two new authors, Ann Tritak, EdD, RN and Margaret Daingerfield, bring a fresh perspective and years of expertise to the 11th edition of this text. The book continues to promote critical and logical thinking, and patient safety with respect to accurate drug dosages through the inclusion of QSEN competencies recommendations. Additionally, worksheets, assessment tests, Clinical Relevance boxes, and Clinical Alerts call attention to situations in actual practice that have resulted in drug errors - providing you with extensive hands-on practice for the NCLEX(R) and beyond. UPDATED! Safe Medication Administration chapter helps you prevent medication errors and understand drug labels, medication administration forms, and physician's order forms UPDATED! Full-color drug labels and equipment illustrations provide a realistic representation of medication administration UPDATED! Detailed coverage of the ratio and proportion method provides a logical, accurate, and consistent method of drug calculation. Over 1,100 practice problems in ratio and proportion offer the extensive practice needed to become proficient in drug calculations. Step-by-step format for each problem includes a unique Proof step in the answer key to ensure that you understand the solution. Patient Safety chapter helps you prevent medication errors and understand drug labels, medication administration forms, and General Worksheets follow each chapter section for additional practice and application of drug calculations. Multiple-choice Worksheets within each chapter help you to prepare for the NCLEX(R) examination. Critical thinking exercises aid you in applying analytical skills and drug calculations to clinical practice. Clinical Alerts highlight potential and common drug calculation errors. Full-color drug labels and equipment illustrations provide you with a realistic representation of medication administration and what you will encounter in the clinical setting.

overcome any math anxiety you may have by clearly explaining how to use the dimensional analysis method. It shows how to analyze practice problems, find the reasonable answer, and then evaluate it. But first, it lets you refresh your math skills with a review of essential math. Written by noted nursing educator Joyce Mulholland, this book offers over 1,400 questions for plenty of practice in mastering math concepts and learning dosage calculations. A comprehensive math review at the beginning of the book includes a self-assessment test to help you identify areas of strength and weakness. A consistent chapter format includes objectives, essential prior knowledge, equipment needed, estimated time to complete the chapter, key vocabulary, and more. Rapid Practice exercises follow each new topic with multiple practice problems, so you can apply concepts immediately. A full-color design includes a special margin section so you can work out practice problems on the spot. Mnemonics make memorization easier and save time in learning. Test tips enhance your comprehension and improve test-taking skills and comfort level. Red arrow alerts call attention to critical math concepts and patient safety theory. Clinical Relevance boxes help you apply medication-related concepts to practice. Unique! FAQ and Answers are derived from students' actual classroom questions, and are especially useful if you are studying outside of a classroom environment. Unique! Ask Yourself questions help in synthesizing information and reinforcing understanding. Unique! Communication boxes include sample nurse-patient and nurse-prescriber dialogues that illustrate clinical application of medication administration. Cultural boxes describe selected math notation and medication-related cultural practices. TJC and ISMP recommendations for abbreviations, acronyms, and symbols are used to reduce medication errors, increase patient safety, and ensure compliance with agency regulations. Online and print references provide opportunities for further research and study. Two chapter finals are included at the end of each chapter. Two comprehensive finals evaluate your understanding, one in NCLEX® exam-style multiple-choice format and the other following a traditional written format. Answer key in the back of the book provides step-by-step solutions to the Rapid Practice exercises, chapter finals, and comprehensive finals so you can pinpoint specific areas for further review. A red flag icon calls attention to high-risk medications. Updated trends in safer medication administration help in reducing sentinel events and adverse drug events. Practice problems are more clinically relevant and organized from simple to complex. Additional clinical relevance, communication, and cultural boxes help prevent errors by offering a variety of examples from clinical practice. Updated content includes: More realistic fraction and decimal problems Expanded Total Parenteral Nutrition (TPN) section with a typical order, common errors, and current guidelines to reduce errors Updated coverage of pediatric medication

### **Dosage Calculations 3ce**

Classroom tested and reviewed, the third Canadian edition of Dosage Calculations draws upon the strengths of two marketing leading Canadian editions and nine US editions that have together helped over 1 million faculty and students allay math anxiety and promote confidence in their ability to perform accurate calculations. The new edition also responds to changes in the healthcare system by introducing new drugs, replacing outdated drugs, and discussing new or refined ways of administering medications. This text is directed at the student or professional who feels uncomfortable with mathematics and wants to improve their ability to perform accurate drug dosage calculations. As a pioneer Canadian text in the topic of medication calculations, the authors have transcended provincial practices to provide a nation-wide perspective on dosage calculations. The text teaches the ?Three-Step Approach? for calculating dosages: 1. Convert measurements to the same unit; 2. Consider what dosage is reasonable; and 3. Calculate using the formula method.

## **The Midwife's Pocket Formulary E-Book**

The fully revised and updated edition of this essential pharmacology textbook presents pharmacologic principles in an accessible, full-color format. Featuring Prototype Drug Charts, Nursing Process Charts, and an extensive math/dosage calculations section, this fourth edition includes updated content throughout, including 75 new full-color drug labels. It also includes six new chapters, new Herb Alert boxes, and an expanded ancillary package. Nursing Process Charts relate nursing care to drug therapy. For each step of the nursing process, concise bulleted points outline the plan of care in relation to treatment for selected drug prototypes. A drug calculations chapter, with an 85-page review of dosage calculations, covers a basic math review, all four methods of calculating dosages, and dosage calculations in various settings and for different routes of administration. A comprehensive guide to medication administration addresses all routes of administration in various settings. Unit openers for drug therapy chapters include illustrated anatomy and physiology overviews and provide a foundation for understanding how each drug works in that body system. Nearly 100 Prototype Drug Charts are included for selected prototype drugs. Each chart lists Drug Class, Dosage, Contraindications, Drug-Lab-Food Interactions, Pharmacokinetics, Pharmacodynamics, Therapeutic Effects/Uses, and Adverse Reactions. Client Teaching sections in each Nursing Process Chart provide client-oriented instructions. Cultural Considerations are covered in a separate chapter and, where appropriate, culturally sensitive client teaching is included in the Nursing Process Charts. Critical Thinking in Action boxes present a clinical scenario and questions for analysis and critical thinking. Study questions appear at the end of every chapter. Includes 75 new full-color drug labels to familiarize students with new medications used in practice. Features an expanded emphasis on herbal therapies, including new Herb Alert boxes and herbal interaction icons throughout the drug families chapters. Coverage of dimensional analysis has been added to the chapter on Medication and Calculations. Features six new chapters: Pediatric Pharmacology, Geriatric Pharmacology, Antipsychotics and Anxiolytics, Antidepressants and Mood Stabilizers, Drugs for the Female Reproductive Cycle I: Pregnancy and Preterm Labor, and Drugs for the Female Reproductive Cycle II: Labor and Delivery. Each method of dosage calculation is consistently highlighted with a distinctive color for easy reference and identification. Full-color Prototype Drug Charts and Nursing Process Charts have been redesigned for easy use.
