The Market Makers

Mountains of business data are piling up in organizations every day. These organizations collect data from multiple sources, both internal and external. These sources include legacy systems, customer relationship management and enterprise resource planning applications, online and e-commerce systems, government organizations and business suppliers and partners. A recent study from the University of California at Berkeley found the amount of data organizations collect and store in enterprise databases doubles every year, and slightly more than half of this data will consist of "reference information," which is the kind of information strategic business applications and decision support systems demand (Kestelyn, 2002). Terabyte-sized (1,000 megabytes) databases are commonplace in organizations today, and this enormous growth will make petabyte-sized databases (1,000 terabytes) a reality within the next few years (Whiting, 2002). By 2004 the Gartner Group estimates worldwide data volumes will be 30 times those of 1999, which

translates into more data having been produced in the last 30 years than during the previous 5,000 (Wurman, 1989).

House cleaning has been an innate human activity forever but only since the early 19th century have mechanical devices replaced the physical labor (performed mostly by women). Mechanical carpet sweepers were replaced by manual suction cleaners, which in turn were replaced by electric vacuum cleaners in the early 20th century. Innovative inventors, who improved vacuum cleaners as electricity became commonly available, made these

advances possible. Many early manufacturers failed, but some, such as Bissell, Hoover, Eureka and others, became household names as they competed for global dominance with improved features, performance and appearance. This book describes the fascinating people who made this possible, as well as the economic, cultural and technological contexts of their times. From obscure beginnings 200 years ago, vacuum cleaners have become an integral part of modern household culture.

During the twentieth century 'affluence' (both at the level of the individual household and that of society as a whole) became intimately linked with access to a range of prestige consumer durables. The Market Makers charts the inter-war origins of a process that would eventually transform these features of modern life from being 'luxuries' to 'necessities' for most British families. Peter Scott examines how producers and retailers succeeded in creating 'mass' (though not universal) market for new suites of furniture, radios, modern housing, and some electrical and gas appliances, while also exploring why some other goods, such as refrigerators, telephones, and automobiles, failed to reach the mass market in Britain before the 1950s. Creating mass markets presented a formidable challenge for manufacturers and retailers. Consumer durables required large markets. Most involved significant research and development costs. Some, such as the telephone, radio, and car, were dependent on complementary investments in infrastructure. All required intensive marketing - usually including expensive advertising in national newspapers and magazines, while some also

needed mass production methods (and output volumes) to make them affordable to a mass market. This study charts the pioneering efforts of entrepreneurs (many of whom, though once household names, are now largely forgotten) to provide consumer durables at a price affordable to a mass market and to persuade a sometimes reluctant public to embrace the new products and the consumer credit that their purchase required. In doing so, Scott shows that, contrary to much received wisdom, there was a 'consumer durables revolution' in inter-war Britain - at least for certain highly prioritised goods.
