Cultures of Memory in South Asia

Handbook of Managerial Behavior and Occupational Health

This paper seeks to answer a number of basic questions. First of all just what are land tenure rights and water rights? Second, how do the respective regimes compare? Third what linkages, if any, are there between land tenure rights and water rights and, if there are none, does this matter, either in general or as regards specific aspects of the interface? A key objective of the paper is to examine which aspects of the rights interface merit further research. In comparing the two regimes a final subsidiary objective of this paper is to try and identify which areas, if any, in one sector can shed light on areas for future research in the other.

Towards User Centric Regulation

Geobiology

This book looks at how syntax, semantics and pragmatics interact in different ways across human languages.

Exploring the Lexis-grammar Interface

With fresh state-of-the-art perspectives on language patterning, this volume showcases studies that recognize and provide evidence for the inseparability of lexis and grammar. The contributors explore in what ways these two areas, often treated separately in linguistic theory and description, form an organic whole.

Anthropology and Psychoanalysis

The contributions of this volume explore the dynamics of the interface between the cognitive and situational levels in translation and interpreting. Until relatively recently, there has been an invisible line in translation and interpreting studies between cognitive research (e.g., into mental processes or attitudes) and sociological research (e.g., concerning organization, status, or institutions). However, rapid developments in translation and interpreting practices (professional, non-professional) have brought to the fore the need to rethink theoretical perspectives and to apply new research methods. The chapters in this volume aim to contribute to this discussion through conceptual and/or empirical research. Drawing on different theoretical and methodological frameworks, they offer insights into diverse translation and interpreting situations, in a number of different countries and

cultures, and their consequences for individual and collective cognition. Originally published as special issue of Translation Spaces 5:1 (2016).

Learn to easily build gadgets, gizmos, robots, and more using Arduino Written by Arduino expert Jeremy Blum, this unique book uses the popular Arduino microcontroller platform as an instrument to teach you about topics in electrical engineering, programming, and human-computer interaction. Whether you're a budding hobbyist or an engineer, you'll benefit from the perfectly paced lessons that walk you through useful, artistic, and educational exercises that gradually get more advanced. In addition to specific projects, the book shares best practices in programming and design that you can apply to your own projects. Code snippets and schematics will serve as a useful reference for future projects even after you've mastered all the topics in the book. Includes a number of projects that utilize different capabilities of the Arduino, while interfacing with external hardware Features chapters that build upon each other, tying in concepts from previous chapters to illustrate new ones Includes aspects that are accompanied by video tutorials and other multimedia content Covers electrical engineering and programming concepts, interfacing with the world through analog and digital sensors, communicating with a computer and other devices, and internet connectivity Explains how to combine smaller topics into more complex projects Shares downloadable

1. 2 Culture and Identity in a Postmodern World
Michel Foucault's statement that: "The present epoch will perhaps be above all the epoch of space. We are in the epoch of simultaneity; we are in the epoch of juxtaposition" (M. Foucault 1986: 22) heralded a new approach to identity in the contemporary world by suggesting that one's identity is formed not as a result of the cultural and national values and history one has inherited, but rather as a result of the different spaces through which one travels. In other words, one's identity is no longer perceived as an inherited construct but rather as something flexible that changes as one moves through the more fluid

spaces of the contemporary, globalized world and internalizes a mixture of the different cultures and ideas that one encounters. The idealized contemporary traveller will thus effortlessly cross national and cultural borders and negotiate a constantly changing and flexible identity for himself. Andy Bennett argues that it is no longer even possible to conceive of identity as a static entity, forged from a communal history and value system, because all of the traditional certainties on which identity formation were based in the past have been fatally undermined by a postmodernist flux and fluidity: "Once clearly demarcated by relatively static and ethnically homogenous communities, the 'spaces' and 'places' of everyday life are now highly pluralistic and contested, and are constantly being defined and redefined through processes of relocation and cultural hybridisation" (A.

Containing both theoretical and empirical contributions written by eminent academics, the Handbook covers a range of factors that influence behavior including migration and health, job insecurity, the impact of age diversity, work stress and health in the context of social inequality as well as occupational health from a psychological perspective. It is an essential reference tool to further research on psychology, stress and understanding the behaviors of health within working environments. The book will be invaluable to academics and students in the fields of occupational health.

The Ordinary

Explores the significance of particular British institutions which offered support and encouragement to those who had fled from Germany and Austria, and analyzes the Thomas Mann Newsletter, a refugee publication. Deals with individual refugees who were important contributors to the story of exile in Britain, and focuses on the Austrian aspect of exile in Britain, with emphasis on literature intended for Austrian children and adolescents and on the importance of the Austrian Center. Concludes with an introduction to the exile holdings at the Institute of Germanic Studies. Annotation copyrighted by Book News Inc., Portland, OR

Politics and the Religious Imagination is the product of a group of interdisciplinary scholars each analyzing the connections between religious narratives and the construction of regional and global politics, combining a set of theoretical and philosophic insights with several case studies that represent varied geographies and religious customs. The past decade has seen increasing interest in the links between religion and politics, and this edited volume seeks to take religion seriously as a motivator of action. Few studies have attempted to bring together the multi-disciplinary work in this burgeoning field of study and this work takes a global perspective, using a variety of contexts including East-West relations to analyze the following key themes: the constructive and destructive hermeneutics of religious stories the relevance and importance of religion as a dominant political narrative the rise of new stories among groups as agents of change the way that religious narratives help to define and constrain the Other the manipulation of religious stories for political benefit This work argues that it is insufficient to judge the relationship of religion and politics through mere institutional or quantitative lenses, and this collection proves that while this promise of the narrative part of the social imaginary has been recognized in political

theory to a certain extent, its influence in the realm of empirical political science has yet to be fully considered. Combining the work of a wide range of experts, this collection will be of great interests to scholars of politics, philosophy, religious studies, and the literary influence of religion.

Decision-Making, Personhood and Dementia

These essays span about a third of a century and include both previously published and some unpublished studies by Robert A. Kraft which focus on interfaces between Jewish materials and the worlds in which they were transmitted and/or perceived, especially Christian contexts. The initial section on general context and methodology is followed by several detailed studies by way of example. The final section touches on some related issues involving Philonic and other texts. The primary concern is with "scripturesque" materials and traditions, whether they later became canonical or not, that seem to have been respected as scriptural by some individuals or communities in the period prior to (or apart from) the development of an exclusivistic canonical consciousness in some Jewish and Christian circles.

The Complicity of Friends

From his initial writings on imagination and memory, to his recent studies of the glance and the edge, the work of American philosopher Edward S. Casey continues to shape 20th-century philosophy. In this

first study dedicated to his rich body of work, distinguished scholars from philosophy, urban studies and architecture as well as artists engage with Casey's research and ideas to explore the key themes and variations of his contribution to the humanities. Structured into three major parts, the volume reflects the central concerns of Casey's writings: an evolving phenomenology of imagination, memory, and place; representation and landscape painting and art; and edges, glances, and voice. Each part begins with an extended interview that defines and explains the topics, concepts, and stakes of each area of research. Readers are thus offered an introduction to Casey's fascinating body of work, and will gain a new insight into particular aspects and applications of Casey's research. With a complete bibliography and an introduction that at once stresses each of Casey's areas of research while putting into perspective their overarching themes, this authoritative volume identifies the overall coherence and interconnections of Edward S. Casey's work and his impact on contemporary thought.

Culture of Memory in South Asia reconfigures European representations of India as a paradigmatic extension of a classical reading, which posits the relation between text and context in a determined way. It explores the South Asian cultural response to European “textual” inheritances. The main argument of this work is that the reflective and generative nodes of Indian cultural formations are located in the configurations of memory, the body and idiom (verbal and visual), where the body or the body complex becomes the performative effect and medium of articulated memories. This work advances its arguments by engaging with mnemocultures-cultures of memory that survive and proliferate in speech and gesture. Drawing on Sanskrit and Telugu reflective sources, this work emphasizes the need to engage with cultural memory and the compositional modes of Indian reflective traditions. This important and original work focuses on the ruptured and stigmatised

resources of heterogeneous Indian traditions and calls for critical humanities that move beyond the colonially configured received traditions. Cultures of Memory suggests the possibilities of transcultural critical humanities research and teaching initiatives from the Indian context in today's academy.

Applying Performance

Features a symposium on law and film as well as two articles of general interest. This book addresses central questions in the operation of law and legal systems.

Exploring Interfaces

In this exciting re-reading of the classic work of Haggard and Kipling, Gail Ching-Liang Low examines the representational dynamics of colonizer versus colonized. Exploring the interface between the native 'other' as a reflection and as a point of address, the author asserts that this 'other' is a mirror reflecting the image of the colonizer - a 'cultural cross-dressing'. Employing psychoanalysis, anthropology and postcolonial theory, Low analyzes the way in which fantasy and fabulation are caught up in networks of desire and power. *White Skins/Black Masks* is a fascinating entry into the current debate of post-colonial theory.

work focuses on the interface between Indigenous/local people and nature conservation in the Asia-Pacific region, the interface between these people and cultural heritage conservation has not received the same attention. This collection brings together papers on the current mechanisms in place in the region to conserve cultural heritage values. It will address the extent to which management regimes have variously allowed, facilitated or obstructed continuing cultural engagement with heritage places and landscapes, and discuss the problems agencies experience with protection and management of cultural heritage places.

Quantum Physics for Scientists and Technologists

A colloquium was convened by the American Academy of Microbiology to deliberate issues relating to the intersecting fields of biological and geological sciences. The colloquium was held in Tucson, Arizona, December 1-3, 2000. The principal findings of the colloquium are summarized below. A wide chasm may seem to divide the living from the non-living. On closer inspection, however, these two realms do not perch on separate ridges, but knit together to form a single lush domain. Geological and biological activities are integrated, and they influence each other in profound ways. This interplay has shaped the Earth and all creatures on it. Studies of

Online Library Exploring The Interface Between The Philosophy And Discipline Of Holistic Nursing Modeling And Role Modeling

geobiology--the present and past interactions between life and inanimate matter--promise to reveal the secrets of life, its origins and evolution, and its present functions on our planet. Such studies hold enormous practical potential as well. Long ago, life arose from chemicals. As new creatures evolved, their activities changed the environment. The altered surroundings in turn invited different types of organisms, which again altered the world around them. Geobiological interactions have created the gases we breathe and the soil in our forests. They contribute to global warming and some forms of pollution, yet knowledge of geobiological processes offers strategies for remedying some of these problems and for enhancing the quality of life on our planet in other ways as well. The new discipline of geobiology will provide a plethora of exciting intellectual and practical rewards. Geobiologists hope, for example, to discern how life began and how it evolved. Furthermore, they aim to identify how environmental conditions influenced these processes and, in turn, were altered by life. Understanding the past will equip us to predict the future. The Earth has already conducted many experiments over the course of its evolution, but, because of the complexity of geobiological interactions, we are unable at present to decipher our planet's lab notebook. Current and future investigations will improve our ability to read the relevant records, interpret them, and make predictions based on past results. Many geobiological processes affect environmental quality and impact human health, which in turn influence the economy and work force. As a result, critical public and science policy issues require input from this field. The study of

geobiology offers significant payoffs that touch society in many ways. To exploit the possibilities, we need to focus diverse resources on this rapidly growing and tremendously promising new field.

Exploring Transculturalism

Dementia is a devastating disorder which may dramatically interfere with decision-making abilities. Effort has focused on trying to determine when a person is no longer capable of making particular decisions or is globally incompetent. However, much less focus has been placed on understanding how the capacity to make decisions influences one's view of oneself, one's world and one's treatment by others. This book aims to broaden discussion around this issue by moving beyond a focus on notions of capability and competence to explore the importance of personhood and the underlying complexities of decision-making for those with dementia. Based on papers from the Centre for Research on Personhood in Dementia (CRPD) workshop, experts in dementia care, law, ethics and philosophy discuss the interface between dementia, personhood and decision-making.

Drawing on a wide range of interdisciplinary and international perspectives, the book forges new understandings of relationships between everyday, informal decision-making and more formal biomedical or legal processes for assessing competence. This collection of papers provides an in-depth understanding of decision-making in relation to dementia for researchers, healthcare practitioners, service providers, legal professionals and anyone with an interest in personhood in dementia care.

Interface Between Igbo Theology and Christianity

Advances in temporal databases make it increasingly easier to store time-dependent information, creating a need for facilities that will help end-users access this information. In the context of natural language interaction, significant effort has been devoted to interfaces that allow database queries to be formulated in natural language. Most of the existing interfaces, however, do not support adequately the notion of time. Drawing upon tense and aspect theories, temporal logics, and temporal databases, this cross-discipline book examines relevant issues from the three areas, developing a unified theoretical framework that can be used to build natural language interfaces to temporal databases. The framework features an HPSG mapping from English to a formally defined meaning representation language, and a corresponding mapping to a temporal extension of the SQL database language. The book is accompanied by a freely available prototype interface, built

according to the framework, and implemented using Prolog and ALE. This is the first in-depth exploration of the notion of time in natural language database interfaces. It will be particularly interesting to researchers working on natural language interaction, tense and aspect, HPSG, temporal logics, and temporal databases, especially those who wish to learn about time-related issues in other disciplines.

This volume contains the proceedings of the conference 'String-Math 2013' which was held June 17-21, 2013 at the Simons Center for Geometry and Physics at Stony Brook University. This was the third in a series of annual meetings devoted to the interface of mathematics and string theory. Topics include the latest developments in supersymmetric and topological field theory, localization techniques, the mathematics of quantum field theory, superstring compactification and duality, scattering amplitudes and their relation to Hodge theory, mirror symmetry and two-dimensional conformal field theory, and many more. This book will be important reading for researchers and students in the area, and for all mathematicians and string theorists who want to update themselves on developments in the math-string interface.

concerning the convergence of Christianity and Igbo Traditional Religion taking place in the Igbo culture area. This book, a fruit of multidisciplinary conversation among Igbo scholars and Igbophiles, offers concepts, themes, issues, and case studies with deep ethnographic details, some of which do not exist anywhere else in print. It is a major statement of how modern Igbo scholars, social scientists, philosophers, theologians, liturgists, and active pastors and parish priests, understand the intersection of Igbo Traditional Religion and Christianity in postcolonial Nigeria. The editors and authors of the chapters of this book draw from their wealth of experience to offer to students, scholars, researchers, community-based organizations and NGOs, and practitioners in interfaith dialogue a “must have” manual to engage in and develop mutual respect and trust among Christian denominations and between them and Igbo Traditional Religion. This book will serve as a blueprint for a deep dialogue among the Igbo in both city and rural settings, in the context of clan and community life context and in the Christian parish setting. The book will certainly appeal to numerous communities in Africa wishing to share similar local experiences and collective memories, but which do not have the channels to talk about themselves in scholarly writing.

unleashes an ambitious and audacious collision between science and magic. The Twil Gate links two very different realms. On one side of the portal is Senal, an advanced technological civilization of some thirty billion inhabitants, all cybernetically linked and at war with machine intelligences many light-years away. On the other side is Irion, a land of myth and legend, where the world is flat and mighty wizards once ruled. Jemma Martele is a linguist and trader from Senal. Although fascinated by the languages and cultures of Irion, she shares her people's assumption that Irion is backward and superstitious and no match for her homeland's superior numbers and technology. But as the two realms march inevitably toward war, Jemma finds herself at the center of historic, unimaginable events that will challenge everything she has ever believed about the world---and herself. The Ordinary is a powerful and entrancing tale of magic, science, and the mysterious truth that binds them together. This Fourth Edition of the highly praised Practical Guide for Medical Teachers provides a bridge between the theoretical aspects of medical education and the delivery of enthusiastic and effective teaching in basic science and clinical medicine. Healthcare professionals are committed teachers and this book is a practical guide to help them maximise their performance. Practical Guide for Medical Teachers charts the steady rise of global interest in medical education in a concise format. This is a highly practical book with useful "Tips" throughout the text. The continual emergence of new topics which are of interest to teachers in all healthcare disciplines is recognised in this new edition with seven new chapters: The hidden curriculum; Team based learning; Patient safety; Assessment of attitudes and professionalism; Medical education leadership; Medical education research; and How to manage a medical college An enlarged group of 73 authors from 14 countries provide both an international perspective and a multiprofessional approach to topics of interest to all healthcare teachers.

their stories in print. It flags up what has been achieved so far, and what still needs to be done.' - Oral History 'The editors of this book, written by a range of authors from the UK and overseas, set out to provide the reader with an understanding of the ways in which people with learning disabilities direct their lives through advocacy. Its strength lies in the way in which it puts to the forefront the voices of those who have been, and still might be, excluded from society if it were not for the different forms of resistance they have engaged in.' - Professional Social Work 'The accounts are all of acts of resistance and survival, many of them told by the people themselves. This creates another fascinating book which contributes greatly to an appreciation of the role of people with learning difficulties themselves in the historical struggle for better treatment in society.' - CommunityLiving 'This book explains how people with learning disabilities have become increasingly able to direct their own lives as fully active members of their communities. It also explains what self-advocacy means for these people and it shows how opportunities and services have changed for them in 10 years.' - Europe for Us! 'Heartbreaking, touching and at times inspirational, this book introduces us to the people who have been oppressed, the system that oppressed them and the individuals who stood up to themRead this if you are involved in supporting people and you will find yourself addressing your practice and attitudes and ultimately, improving the quality of care you deliver.' - Community Care 'The accounts are all of acts of resistance and survival, many of them told by the people themselves. This creates another fascinating book which contributes

greatly to an appreciation of the role of people with learning difficulties themselves in the historical struggle for better treatment in society.' - Community Living Exploring Experiences of Advocacy by People with Learning Disabilities charts the course through which people with learning disabilities have become increasingly able to direct their own lives as fully active members of their communities. Accounts from the UK, Australia, Canada and Iceland consider both the individual pioneers of self advocacy and local and national groups that have been set up to work actively towards improved services for people with learning disabilities. The book also examines what self-advocacy means for these people and provides an overview of how opportunities and services have changed for them over the decades. Many of the personal accounts, photographs and songs included in this book will be accessible and encouraging to people with learning disabilities, and they will provide inspiring reading for professionals who work with them, family members and community and government service providers.

and with simple math, assuming no prior knowledge of the topic. This cohesive book begins with the wavefunction to develop the basic principles of quantum mechanics such as the uncertainty principle and wave-particle duality. Comprehensive coverage of quantum theory is presented, supported by experimental results and explained through applications and examples without the use of abstract and complex mathematical tools or formalisms. From there, the book: Takes the mystery out of the Schrodinger equation, the fundamental equation of quantum physics, by applying it to atoms Shows how quantum mechanics explains the periodic table of elements Introduces the quantum mechanical concept of spin and spin quantum number, along with Pauli's Exclusion Principle regarding the occupation of quantum states Addresses quantum states of molecules in terms of rotation and vibration of diatomic molecules Explores the interface between classical statistical mechanics and quantum statistical mechanics Discusses quantum mechanics as a common thread through different fields of nanoscience and nanotechnology Each chapter features real-world applications of one or more quantum mechanics principles. "Study Checkpoints" and problems with solutions are presented throughout to make difficult concepts easy to understand. In addition, pictures, tables, and diagrams with full explanations are used to present data and further explain difficult concepts. This book is designed as a complete course in quantum mechanics for senior undergraduates and first-year graduate students in non-physics majors. It also applies to courses such as modern physics, physical chemistry and

Language is a system of communication in which grammatical structures function to express meaning in context. While all languages can achieve the same basic communicative ends, they each use different means to achieve them, particularly in the divergent ways that syntax, semantics and pragmatics interact across languages. This book looks in detail at how structure, meaning, and communicative function interact in human languages. Working within the framework of Role and Reference Grammar (RRG), Van Valin proposes a set of rules, called the 'linking algorithm', which relates syntactic and semantic representations to each other, with discourse-pragmatics playing a role in the linking. Using this model, he discusses the full range of grammatical phenomena, including the structures of simple and complex sentences, verb and argument structure, voice, reflexivization and extraction restrictions. Clearly written and comprehensive, this book will be welcomed by all those working on the interface between syntax, semantics and pragmatics.
