Cutaneous T-cell lymphoma (CTCL) is one of the 'great mimickers'. To be certain of the diagnosis, there must be clear correlation between the pathological and clinical findings, making collaboration between clinicians and pathologists essential. Knowing the patient's history, lesion description and diagnostic work-up will help the pathologist make a more informed decision with respect to the histopathology under the microscope. Likewise, understanding the terminology used in the pathology report will improve the clarity of the clinician's diagnosis. 'Fast Facts: Diagnosing Cutaneous T-Cell Lymphoma' is designed to help primary care providers, dermatologists and pathologists speak the same language. With over 100 superb clinical and pathological images, this concise, practical handbook will ensure clear communication with respect to the clinical presentation, histopathology and immunophenotyping of:

- early and advanced mycosis fungoides and its variants
- Sézary syndrome
- other non-mycosis fungoides CTCLs.

It is therefore essential reading for all pathologists, non-specialist clinicians and dermatology trainees.

Few side effects of cancer treatment are more feared by patients than nausea and vomiting. Failure to control these symptoms on the first day of chemotherapy increases the risk of them occurring on subsequent days and in subsequent cycles of chemotherapy, and can often result in patients refusing further cancer treatment. Very effective antiemetics are available to prevent this from happening, but do you know how best to use them? 'Fast Facts: Chemotherapy-Induced Nausea and Vomiting' presents the evidence for the clinical agents that can prevent CINV, along with the recommendations for their use in various clinical settings using recently established international guidelines. Correct administration of prophylactic antiemetics in relation to the emetogenicity of the chemotherapy being given not only improves patients' quality of life during treatment but also adherence to subsequent cancer treatments, thus improving overall outcomes. This refreshingly readable handbook is therefore a must-read resource for all health professionals in a position to make this kind of a difference. Contents: • Definitions and pathophysiology • Types of CINV and risk factors • Antiemetic agents • Prevention and management of acute and delayed CINV • Treatment of breakthrough, refractory and anticipatory CINV • Prevention and treatment of chemotherapy-induced nausea • Barriers and opportunities in CINV management

Cutaneous T-cell lymphoma (CTCL) has been described as a 'great mimicker'. The correct diagnosis hinges on effective collaboration between clinicians and pathologists to correlate pathological and clinical findings. The patient's history, lesion description and diagnostic work-up will help the pathologist interpret the histopathology, whilst the clinician's diagnosis is aided by a clear understanding the terminology used in the pathology report. The treatment of early and advanced mycosis fungoides and its variants is potentially lifelong, with patients typically cycling among treatments, interspersed with periods of expectant therapy providing palliation and symptomatic relief. Effective management requires knowledge of the wide range of options, how they are used, and their side-effect profile, in order to tailor treatment to the individual patient. 'Fast Facts: Cutaneous T-Cell Lymphoma' is designed to help primary care providers, dermatologists, and oncologists to communicate effectively with pathologists in the diagnosis of this chronic condition, aided by over 100 superb clinical and pathological images, and to provide tailored long-term care for their patients. This concise, practical handbook will ensure clear communication with respect to the clinical presentation, histopathology, immunophenotyping and treatment of: • early and advanced mycosis fungoides and its variants • Sézary syndrome • other non-mycosis fungoides CTCLs. It is essential reading for pathologists, non-specialist clinicians and dermatology and oncology trainees.
