Deciphering Markets and Money

This first volume in a three-volume exposition of Shubik's vision of "mathematical institutional economics" explores a one-period approach to economic exchange with money, debt, and bankruptcy. This is the first volume in a three-volume exposition of Martin Shubik's vision of "mathematical institutional economics"--a term he coined in 1959 to describe the

theoretical underpinnings needed for the construction of an economic dynamics. The goal is to develop a process-oriented theory of money and financial institutions that reconciles micro- and macroeconomics, using as a prime tool the theory of games in strategic and extensive form. The approach involves a search for minimal financial institutions that appear as a logical, technological, and institutional necessity, as part of the "rules of the game." Money and financial institutions are assumed to be the basic elements of the network that transmits the sociopolitical imperatives to the economy. Volume 1 deals with a one-period approach to economic exchange with money, debt, and bankruptcy. Volume 2 explores the new economic features that arise when we consider multi-period finite and infinite horizon economies. Volume 3 will consider the specific role of financial institutions and government, and formulate the economic financial control problem linking micro- and macroeconomics.

Jukka Gronow's book *Deciphering Markets and Money* solves the problem of the specific social conditions of an economic order based on money and the equal exchange of commodities. Gronow scrutinizes the relation of sociology to neoclassical economics and reflects on how sociology can contribute to the analyses of the major economic institutions. The question of the comparability and commensuration of economic objects runs through the chapters of the book. The author shows that due to the multidimensionality and principal quality uncertainty of products, markets would collapse without market devices that are either procedural, consisting of technical standards and measuring instruments, or aesthetic, relying on the judgements of taste, or both. In his book, Gronow demonstrates that in this respect, financial markets share the same problem as the markets of wines, movies, or PCs and mobile phones, and hence offer a highly actual case to study their social constitution in the process of coming into being.

The Theory of Money and Financial Institutions

Following the Money

Financial markets across the Arabian Peninsula have gone from being small, quasi-medieval structures in the 1960s to large world-class groupings of financial institutions. This evolution has been fueled by vast increases in income from oil and natural gas. The Financial Markets of the Arab Gulf presents and analyzes the banks, stock markets, investment companies, money changers and sovereign wealth funds that have grown from this oil wealth and how this income has acted as a buffer between Gulf society at large and the newfound cash reserves of Gulf Cooperation Council states (Saudi Arabia, the United Arab Emirates, Qatar, Kuwait, Oman and Bahrain) over the last fifty years. By assessing the development of institutions like the Abu Dhabi Investment Authority, the Saudi Arabian Monetary Authority, the Public Investment Fund and the National Bank of Kuwait, The Financial Markets of the Arab Gulf evaluates the growth of the markets and provides a detailed, critical, snapshot of the current form and function of the Gulf's financial markets. It argues that the markets have been controlled by various state institutions for socio-political reasons. In particular, the Saudi state has used its sophisticated regulatory regime to push for industrialization and diversification, which culminated in the Vision 2030 plan. The UAE, Qatar, Kuwait, Bahrain and Oman have also been strongly involved in establishing modern markets for similar purposes but have done so through different means, with varying results, and each in line with what has been considered their respective comparative advantages. Along with critically surveying these institutions and their role in global finance, the book also presents case studies depicting transactions typical to the region, including the highly profitable documentary credits of commercial banks, the financial scandal of certain financiers and their regulatory arbitrage between Bahrain and

Saudi Arabia, a review of the Dubai's trade miracle, and an assessment of the value and importance of the privatization of Saudi Aramco.

Financial Institutions, Markets, and Money

Financial Markets, Institutions and Money

Collectively, mankind has never had it so good despite periodic economic crises of which the current sub-prime crisis is merely the latest example. Much of this success is attributable to the increasing efficiency of the world's financial institutions as finance has proved to be one of the most important causal factors in economic performance. In a series of insightful essays, financial and economic historians examine how financial innovations from the seventeenth century to the present have continually challenged established institutional arrangements, forcing change and adaptation by governments, financial intermediaries, and financial markets. Where these have been successful, wealth creation and growth have followed. When they failed, growth slowed and sometimes economic decline has followed. These essays illustrate the difficulties of co-ordinating financial innovations in order to sustain their benefits for the wider economy, a theme that will be of interest to policy makers as well as economic historians.
