Hone your fly-casting skills in just a few hours! The better you can cast, the more you'll enjoy fly-fishing. With good casting technique you can place the fly where you want it, effortlessly and with precision and grace, even when wind or obstructions conspire against you. In *Master the Cast*, George V. Roberts Jr., a lifelong fly-fisher and sought-after instructor, walks you through a course that breaks the complicated mechanics into a few simple components. Then, with the help of hundreds of photos and illustrations, he shows you how to master these in seven concise lessons, including: The Roll Cast, which builds your rod-arm mechanics (how the hand, wrist, forearm, and upper arm function to make the rod work) The Pick-Up-and-Lay-Down Cast, which forms the foundation of all straight-line casting False Casting, which allows you to keep the fly airborne for several strokes before delivering it plus Shooting Line, Casting in All Planes, Drift and Follow-Through, Off-Vertical Casting, and an advanced lesson on Hauling Master the Cast is an indispensable resource for all fly-fishers, beginner to advanced, that will have you casting flies with confidence, precision, and consistency after only a few hours' practice. "Most fly-fishers cast mechanically without understanding the mechanics of the cast. But understanding precisely what is going on and why is what makes a good caster into an excellent one. George Roberts understands casting mechanics inside and out, and his *Master the Cast* will help you do just that."—James R. Babb, editor, *Gray's Sporting Journal* Praise for George Roberts' *A Fly-Fisher's Guide to Saltwater Naturals and Their Imitation*: "A book in a class by itself."—*Fly Fishing Saltwater* "It is difficult to overestimate the importance of this book."—*The Fly-Tyer's Catalog*

Some communities exist for tens, even hundreds, of years. Others short-lived. What, then, makes for communal 'success'? Bary Shenker, who lived on a Kibbutz for a number of years, compares the Hutterites, the Kibbutzim and therapeutic communities – and argues that there is no simple formula. Through historical and sociological analysis, combined with personal experience and insight, the author provides fresh thoughts on a form of a social life which fascinates us all. First published in 1986.

Suspension is probably the most misunderstood aspect of motorcycle performance. This book, by America's premier suspension specialist, makes the art and science of suspension tuning accessible to professional and backyard motorcycle mechanics alike. Based on Paul Thede's wildly popular Race Tech Suspension Seminars, this step-by-step guide shows anyone how to make their bike, or their kid's, handle like a pro's. Thede gives a clear account of the three forces of suspension that you must understand to make accurate assessments of your suspension's condition. He outlines testing procedures that will help you gauge how well you're improving your suspension, along with your riding. And, if you're inclined to perfect your bike's handling, he even explains the black art of chassis geometry. Finally, step-by-step photos of suspension disassembly and assembly help you rebuild your forks and shocks for optimum performance. The book even provides detailed troubleshooting guides for dirt, street, and supermoto--promising a solution to virtually any handling problem.

This cookbook was written for all the dogs who rely on their master for all their needs and ask nothing in return. Good nutrition is as important to your dog as it is to you. Cancer is the leading cause of death in dogs and cats today, so the food they ingest is paramount to their health, as well as exercise and annual visits to the veterinarian. This cookbook was written to have fun in the kitchen cooking delicious recipes that your dog will love. He will probably join you in the kitchen when he starts to know that the aroma of good food is for him. P.J.'s Bichon Frise lived to be 22 years old and spunky to the end of her life. P.J. attributes her Bichon Frise's excellent health to the meals she cooked for her, long before the pet food recall scare. You have control of all the ingredients your dog eats. If your dog had to cook for you, don't you think it would give you the best possible food to keep you healthy and living longer? You bet they would. Do you feed your dog the same thing, day after day, week after week? Yuk. This cookbook will get you out of this rut and you will see a happier and healthier dog if you start cooking these easy and fun recipes. The book is also filled with fun facts, dog jokes, dog sayings, astrology, dog breeds, and trivia to make this cookbook a must for you to have. A portion of the proceeds of this book will be donated to the Cancer Society for Animals.

Here is a unique book. It describes the theories and processes of repairing and adjusting the modern watch in precise and meticulous detail: a thing which has never been done so completely before in the many books on the same subject. As a text book it is a revelation. Taking nothing for granted, except the ability to read and comprehend a simple description of mechanical processes, de Carle takes his reader through every stage and every operation of watch repairing and to deal with them thoroughly is quite a programme - it takes 300 pages containing 24 chapters, two appendices and 553 illustrations. The fine draughtsmanship and accurate technical detail of the illustrations set a new standard. Practical Watch Repairing can justifiably claim to be the best illustrated book on practical horology yet issued, and one of the best of its kind on any subject. The publication of the book marks the beginning of a new epoch in the study of the mechanics of horology.

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the

industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.

Each Haynes manual provides specific and detailed instructions for performing everything from basic maintenance and troubleshooting to a complete overhaul of the machine, in this case the Yamaha YZF-R1, model years 1998 through 2003. Do-it-yourselfers will find this service and repair manual more comprehensive than the factory manual, making it an indispensable part of their tool box. A typical Haynes manual covers: general information; troubleshooting; lubrication and routine maintenance; engine top end; engine lower end; primary drive, clutch and external shift mechanism; transmission and internal shift mechanism; engine management system; electrical system; wheels, tires and drivebelt; front suspension and steering; rear suspension; brakes; body, and color wiring diagrams. An index makes the manual easy to navigate.

As a leading Confederate general, Braxton Bragg (1817–1876) earned a reputation for incompetence, for wantonly shooting his own soldiers, and for losing battles. This public image established him not only as a scapegoat for the South's military failures but also as the chief whipping boy of the Confederacy. The strongly negative opinions of Bragg's contemporaries have continued to color assessments of the general's military career and character by generations of historians. Rather than take these assessments at face value, Earl J. Hess's biography offers a much more balanced account of Bragg, the man and the officer. While Hess analyzes Bragg's many campaigns and battles, he also emphasizes how his contemporaries viewed his successes and failures and how these reactions affected Bragg both personally and professionally. The testimony and opinions of other members of the Confederate army--including Bragg's superiors, his fellow generals, and his subordinates--reveal how the general became a symbol for the larger military failures that undid the Confederacy. By connecting the general's personal life to his military career, Hess positions Bragg as a figure saddled with unwarranted infamy and humanizes him as a flawed yet misunderstood figure in Civil War history.

Velocette (pronounced velo-set) is an icon of the classic British motorcycle scene. Engineering excellence mattered more than the whims of the market to the Goodman family, owners of Veloce, Ltd., manufacturer of the Velocette motorcycle. This painstakingly assembled book details the history of the machines' development and competition success, as well as the story of the family behind the marque. Run with honesty and integrity, the company gained a loyal following and a reputation for building quality machines before closing its doors in 1971, beset by the economic factors that caused the downfall of the whole of the British motorcycle industry.

Power, Process and Participation

This book focuses on participatory capacity-building in ways that address the practical needs and strategic interests of the disadvantaged and disempowered - it examines how differences in class, ethnicity, race, caste, religion, age and gender lead to the 'politics of exclusion'. It offers innovative, accessible tools to enable facilitators from both inside and outside communities to empower those who are

frequently omitted from decision-making processes. The style and approach are interactive, stimulating reflection and involvement by all parties. Power, Process and Participation aims to enable facilitators from inside and outside communities to involve and empower those commonly excluded in decision making processes. It provides a balanced overview of how 'participation' has been used in this context and raises the questions that all those involved in this type of activity should ask themselves. There are three distinct sections: Part 1: Definitions, history and issues - which provides an overview of some of the broad issues underlying the themes addressed in this book. A useful brief history is given of well known participatory methodologies and key questions are asked on the use and misuse of 'participation': whose ends does it serve, who is involved and what are the power relations, appropriate time frames and scale and how should it proceed in order to best serve the interests of the people involved? Part 2: Methods and ethics in our research and our use of the mediaN251pp - Whose expertise counts? How is it acknowledged? These are explored in the context of contributors' experience of undertaking research with women in Zimbabwe. Questions of ownership and consent as well as other issues are discussed further in the context of the use of video in participatory communication. Part 3: Tools for environmental and social change - The longest section in the book gives 35 tools and how to use them in facilitating participation. An introductory session explains how to use the section. Tools are cross referenced and for each the purpose, materials, process and estimated time is provided. For a number of the tools, examples of how they have been used in practice are included. Power, Process and Participation describes itself as a manual and although it does not immediately look like one, it is readable, logically arranged and combines instructions on how tools can be used with examples of how they have been used in practice. There are notes on how to use the book and how to choose from the tools offered. This book would be useful to anyone looking for both an overview of participation and how it can be used and misused; and guidance on facilitating the process.
