An Uncertain Glory

Kuklys examines how Nobel Prize-winning economist Amartya Sen's approach to welfare measurement can be put in practice for poverty and inequality measurement in affluent societies such as the UK. Sen argues that an individual's welfare should not be measured in terms of her income, but in terms what she can actually do or be, her capabilities. In Chapters 1 and 2, Kuklys describes the capability approach

from a standard welfare economic point of view and provides a comprehensive literature review of the empirical applications in this area of research. In the remaining chapters, novel econometric techniques are employed to operationalise the concepts of functionings and capability to investigate inequality and poverty in terms of capability in the UK. Kuklys finds that capability measurement is always a useful complement to traditional monetary analysis, and particularly so in the case of capability-deprived disabled individuals.

Resources, Values, and Development

“One of the few world intellectuals on whom we may rely to make sense out of our existential confusion.”—Nadine Gordimer In this sweeping philosophical work, Amartya Sen proposes that the murderous violence that has riven our society is driven as much by confusion as by inescapable hatred. Challenging the reductionist division of people by race, religion, and class, Sen presents an inspiring vision of a world that can be made to move toward peace as firmly as it has spiraled in recent years toward brutality and war.

The No-Nonsense Guide to Human Rights

Rights are universal - that's the theory. How can this be transformed into reality for all?

An Introduction to the Human Development and Capability Approach

With growing affluence in the developed world, food has become an increasing focus for attention. Here, the authors argue that in order to understand the extensive and dramatic developments in the world of food, a new interdisciplinary approach is necessary. The Age of Affluence successfully addresses food consumption in this way. The volume: * argues the importance of socioeconomic and cultural factors over diet, in influencing the production, marketing and consumption of different groups of foods; * places food systems theory on sound analytical foundations; * draws critically upon food systems literature; * includes case studies from the sugar, dairy and meat systems; * employs novel statistical techniques to identify and explain distinct patterns of food consumption; The book will help to revitalize the discipline of food studies and points the way forward for the continuing study of food consumption. As such, it will be invaluable to students, researchers and policymakers engaged in the world of food

Rationality and freedom are among the most profound and contentious concepts in philosophy and the social sciences. In this, the first of two volumes, Amartya Sen brings clarity and insight to these difficult issues.

Amartya Sen

By 2050 the world will be faced with the enormous challenge of feeding 9 billion people despite being affected by climate change, rising energy costs and pressure on food growing land and other major resources. How will the world produce 70% more food by 2050 to feed a projected extra 2.3 billion people? What will be the impact of food shortages and high prices on areas in crisis such as sub-Saharan Africa? Where will future production growth come from? And how do we balance the need for environmental protection with sustainable agricultural production methods? This is the first text to present a scholarly, balanced approach to the contentious area of food production and supply up to 2050 - offering a readable and well-informed account which tackles the global food situation in all its totality, from agricultural production, technological advance, dietary concerns, population changes, income trends, environmental issues, government food and agriculture policy, trade,

CONCERN from Ireland, OXFAM from the United Kingdom, and REDD BARNA (Save the Children) from Norway in Ethiopia. Micro level in-depth empirical data on the activities of these northern NGOs are collected and analysed. Following the 1984/85 famine and drought in Ethiopia, international NGOs brought relief aid to Ethiopia and took part in its distribution as well. As the relief activities declined some NGOs moved into rehabilitation and later into development work with the intention of addressing the root cause of the problems, i.e. rural poverty. The book also examines NGOs not only as 'micro-operators' but also as social forces that influence macro development policies that affect the poor in a participatory and sustainable way.

Creating Capabilities

Amartya Sen uses his 1999 work *Development as Freedom* to evaluate the processes and outcomes of economic development. Having come to the conclusion that development is best summed up as the expansion of freedom, Sen examines traditional definitions and understandings of the term. He says people tend to think of freedoms as economic (the freedom to enter into market exchanges) or political (the freedom to vote and be an active citizen), and tries to understand why the definition has been so narrow hitherto. He concludes that an evaluation of true freedom must necessarily include the freedom to access social services such as healthcare, sanitation and nutrition, just as much as it must acknowledge economic and political freedoms. Evaluating the relevance of the current thinking behind development, Sen concludes that the term 'freedom' cannot simply be about income. In many ways, measuring income does not account for various "unfreedoms" (manmade or natural bars to wellbeing) that hinder development. Sen's evaluation is all the more powerful for its clarity: "The freedom-centered perspective has a generic similarity to the common concern with "quality of life."

Food, Economics and Entitlements

The subject of discussion in this book is the philosophy of welfare Economics. The collective choice and the subjects of freedom through development are discussed in welfare economics. Inequality is to be reduced and basal equality has to be evolved to aid human welfare. The entitlement

approach is the only solution for poverty and famine. All four subjects are woven in philosophical thought by Dr. Amartya Sen for the wellbeing of people. The book is a humble attempt at dealing with the subject of human welfare through religion. Killing is rampant in one or another form. The mantra of non-violence is the most valuable message to the world. The concept of non-killing is brought to light with the ancient agamic text of ACHARANG SUTRA. The view of Mahatma Gandhi on Ahimsa (non-violence) is compared with the Jain religious principle in modern context. It is important to be tolerant and to be able to understand others view points in the present situation. This is possible through Anakantvada of Jain religion. The non-possessiveness of materialistic items and wealth are important issues discussed in the book. The Karma (deeds) are an important factor in ones life. Karma is solely responsible for the uplift or downfall of the human soul. Jain religion works for the wellbeing of the human soul.

the globe. He has also contributed almost without peer to the study of economics, philosophy and politics, transforming social choice theory, development economics, ethics, political philosophy and Indian political economy, to list but a few. This book offers a much-needed introduction to Amartya Sen's extraordinary variety of ideas. Lawrence Hamilton provides an excellent, accessible guide to the full range of Sen's writings, contextualizing his ideas and summarizing the associated debates. In elegant prose, Hamilton reconstructs Sen's critiques of the major philosophies of his time, assesses his now famous concern for capabilities as an alternative for thinking about poverty, inequality, gender discrimination, development, democracy and justice, and unearths some overlooked gems. Throughout, these major theoretical and philosophical achievements are subjected to rigorous scrutiny. Amartya Sen is a major work on one of the most influential economists and philosophers of the last couple of centuries. It will be invaluable to students and scholars across the humanities and social sciences and an excellent guide for policy makers, legislators and global activists.

Amartya Sen

By the winner of the 1988 Nobel Prize in Economics, an essential and paradigm-altering framework for understanding economic development--for both rich and poor--in the twenty-first century. Freedom, Sen argues, is both the end and most efficient means of sustaining economic life and the key to securing the

general welfare of the world's entire population. Releasing the idea of individual freedom from association with any particular historical, intellectual, political, or religious tradition, Sen clearly demonstrates its current applicability and possibilities. In the new global economy, where, despite unprecedented increases in overall opulence, the contemporary world denies elementary freedoms to vast numbers--perhaps even the majority of people--he concludes, it is still possible to practically and optimistically retain a sense of social accountability. Development as Freedom is essential reading.

Fifty Key Thinkers on Development

When India became independent in 1947 after two centuries of colonial rule, it immediately adopted a firmly democratic political system, with multiple parties, freedom of speech, and extensive political rights. The famines of the British era disappeared, and steady economic growth replaced the economic stagnation of the Raj. The growth of the Indian economy quickened further over the last three decades and became the second fastest among large economies. Despite a recent dip, it is still one of the highest in the world. Maintaining rapid as well as environmentally sustainable growth remains an important and achievable goal for India. In *An Uncertain Glory*, two of India's leading economists argue that the country's main problems lie in the lack of attention paid to the essential needs of the people, especially of the poor, and often of women. There

have been major failures both to foster participatory growth and to make good use of the public resources generated by economic growth to enhance people's living conditions. There is also a continued inadequacy of social services such as schooling and medical care as well as of physical services such as safe water, electricity, drainage, transportation, and sanitation. In the long run, even the feasibility of high economic growth is threatened by the underdevelopment of social and physical infrastructure and the neglect of human capabilities, in contrast with the Asian approach of simultaneous pursuit of economic growth and human development, as pioneered by Japan, South Korea, and China. In a democratic system, which India has great reason to value, addressing these failures requires not only significant policy rethinking by the government, but also a clearer public understanding of the abysmal extent of social and economic deprivations in the country. The deep inequalities in Indian society tend to constrict public discussion, confining it largely to the lives and concerns of the relatively affluent. Drèze and Sen present a powerful analysis of these deprivations and inequalities as well as the possibility of change through democratic practice.

Food and Freedom

How do we evaluate ambiguous concepts such as wellbeing, freedom, and social justice? How do we develop policies that offer everyone the best chance to achieve what they want from life? The capability approach, a theoretical framework pioneered by the philosopher and economist Amartya Sen in the 1980s, has become an increasingly influential way to think about these issues. *Wellbeing, Freedom and Social Justice: The Capability Approach Re-Examined* is both an introduction to the capability approach and a thorough evaluation of the challenges and disputes that have engrossed the scholars who have developed it. Ingrid Robeyns offers her own illuminating and rigorously interdisciplinary interpretation, arguing that by appreciating the distinction between the general capability approach and more specific capability theories or applications we can create a powerful and flexible tool for use in a variety of academic disciplines and fields of policymaking. This book provides an original and comprehensive account that will appeal to scholars of the capability approach, new readers looking for an

interdisciplinary introduction, and those interested in theories of justice, human rights, basic needs, and the human development approach.

International Non-governmental Organisations in Rural Development in Ethiopia

The noted economist and philosopher Amartya Sen argues that the dictum "all people are created equal" serves largely to deflect attention from the fact that we differ in age, gender, talents, and physical abilities as well as in material advantages and social background. He argues for concentrating on higher and more basic values: individual capabilities and freedom to achieve objectives. By concentrating on the equity and efficiency of social arrangements in promoting freedoms and capabilities of individuals, Sen adds an important new angle to arguments about such vital issues as gender inequalities, welfare policies, affirmative action, and public provision of health care and education.

This Open Access Book is the first to examine disasters from a multidisciplinary perspective. Justification of actions in the face of disasters requires recourse both to conceptual analysis and ethical traditions. Part 1 of the book contains chapters on how disasters are conceptualized in different academic disciplines relevant to disasters. Part 2 has chapters on how ethical issues that arise in relation to

disasters can be addressed from a number of fundamental normative approaches in moral and political philosophy. This book sets the stage for more focused normative debates given that no one book can be completely comprehensive. Providing analysis of core concepts, and with real-world relevance, this book should be of interest to disaster scholars and researchers, those working in ethics and political philosophy, as well as policy makers, humanitarian actors and intergovernmental organizations..

Disasters: Core Concepts and Ethical Theories

In this elegant critique, Amartya Sen argues that welfare economics can be enriched by paying more explicit attention to ethics, and that modern ethical studies can also benefit from a closer contact with economics. He argues further that even predictive and descriptive economics can be helped by making more room for welfare-economic considerations in the explanation of behaviour.
