A basic, non-mathematical textbook for non-science students in secondary school or college. The book is based on Robert Karplus' many years of research on how beginners think about physics. In the "modeling approach" students explore and test simple analog, working and mathematical models for physical phenomena. The models provide a clear, understandable transition to the key principles and theories of physics. The book begins with the basic concepts of relative motion, reference frames, interaction, systems, and a descriptive overview of energy transfer. Subsequent chapters develop the details of temperature and heat, thermal (internal) energy, forces and work, electrical energy and electrical circuits, velocity

and acceleration, Newton's Laws, motion near the surface of the earth, periodic and circular motion, celestial mechanics and gravity, pressure and kinetic theory, light and sound, waves, and modern physics (Bohr model and the basics of quantum mechanics). The "Modeling Instruction" approach is used in secondary schools throughout the US (see modeling.asu.edu). This book is especially useful in conjunction with (or as preparation for) the study of chemistry.

The Glencoe Vocabulary Builder program uses a systematic approach to building students vocabulary by presenting words in context or information about word parts to help students unlock word meanings independently, and by requiring students to apply their knowledge of new words in reading and writing exercises. Each book in the seven book series is designed for a specific reading level and features readings from the humanities, social studies, and sciences, vocabulary from Greek and Latin roots, assessment after each writing assignment, and a section on taking standardized tests! Vocabulary Builder is a research-based program and is ideal for SAT/ACT preparation.

Glencoe iScience: Motion, Forces, and Energy, Student Edition

Study Guide and Reinforcement Worksheets allow for differentiated instruction through a wide range of question formats. There are worksheets and study tools for each section of the text that help teachers track students' progress toward understanding concepts. Guided Reading Activities help students identify and comprehend the important information in each chapter.

(© 2010) The Subcommittee on the Catechism, United States Conference of Catholic Bishops, has found that this catechetical high school text is in conformity with the Catechism of the Catholic Church and fulfills the requirements of Core Course V of the Doctrinal Elements of a Curriculum Framework for the Development of Catechetical Materials for Young People of High School Age. Meeting Jesus in the Sacraments reveals the sacraments as the definitive way that Jesus remains present to the Church and the world today. The text explores concrete ways for students to understand the sacraments, participate in their rites, and benefit from their graces. The text is organized around the traditional definition of sacrament from the Catechism of the Catholic Church--an efficacious sign of grace, instituted by Christ and entrusted to the Church, by which divine life is dispensed to us by the work of the Holy Spirit. This definition is clarified by organizing the chapters around four dimensions of the sacrament: memorial, celebration, communion, and transformation. Through regular placement of "For Reflection" panels and assignments that focus on deeper research, developing a personal and communal prayer life, and active transformation of self and society, this text allows students to come to know Jesus through participation in the sacraments and the grace of their effects. Selections from Catholic blogs and profiles of saints offer a practical application of the sacrament to teenagers.

For Introductory Calculus-based Physics Courses. Putting physics first Based on his storied research and teaching, Eric Mazur's Principles & Practice of Physics builds an understanding of physics that is both thorough and accessible. Unique organization and pedagogy allow students to develop a true conceptual understanding of physics alongside the quantitative skills needed in the course. * New learning architecture: The book is structured to help students learn physics in an organized way that encourages comprehension and reduces distraction. * Physics on a contemporary foundation: Traditional texts delay the introduction of ideas that we now see as unifying and foundational. This text builds physics on those unifying foundations, helping students to develop an understanding that is stronger, deeper, and fundamentally simpler. * Research-based instruction: This text uses a range of research-based instructional techniques to teach physics in the most effective manner possible. The result is a groundbreaking book that puts physics first, thereby making it more accessible to students and easier for instructors to teach. MasteringPhysics(R) works with the text to create a learning program that enables students to learn both in and out of the classroom. This program provides a better teaching and learning experience for you and your students. Here's how: * Build an integrated, conceptual understanding of physics: Help students gain a deeper understanding of the unified laws that govern our physical world through the innovative chapter structure and pioneering table of contents. * Encourage informed problem solving: The separate Practice Volume empowers students to reason more effectively and better solve problems. * Personalize learning with MasteringPhysics: MasteringPhysics provides students with engaging experiences that coach them through physics with specific wrong-answer feedback, hints, and a wide variety of educationally effective content.
