The federal government operates six major health care programs that serve nearly 100 million Americans. Collectively, these programs significantly influence how health care is provided by the private sector. Leadership by Example explores how the federal government can leverage its unique position as regulator, purchaser,

provider, and research sponsor to improve care - not only in these six programs but also throughout the nation's health care system. The book describes the federal programs and the populations they serve: Medicare (elderly), Medicaid (low income), SCHIP (children), VHA (veterans), TRICARE (individuals in the military and their dependents), and IHS (native Americans). It then examines the steps each program takes to assure and improve safety and quality of care. The Institute of Medicine proposes a national quality enhancement strategy focused on performance measurement of clinical quality and patient perceptions of care. The discussion on which this book focuses includes recommendations for developing and pilot-testing performance measures, creating an information infrastructure for comparing performance and disseminating results, and more. Leadership by Example also includes a proposed research agenda to support quality enhancement. The third in the series of books from the Quality of Health Care in America project, this well-targeted volume will be important to all readers of *To Err Is Human* and *Crossing the Quality Chasm* - as well as new readers interested in the federal government's role in health care.

This selection of papers encompasses recent methodological advances in several important areas, such as multivariate failure time data and interval censored data,

as well as innovative applications of the existing theory and methods. Using a rigorous account of statistical forecasting efforts that led to the successful resolution of the John-Manville asbestos litigation, the models in this volume can be adapted to forecast industry-wide asbestos liability. More generally, because the models are not overly dependent on the U.S. legal system and the role of asbestos, this volume will be of interest in other product liability cases, as well as similar forecasting situations for a range of insurable or compensational events. Throughout the text, the emphasis is on the iterative nature of model building and the uncertainty generated by lack of complete knowledge of the injury process. This uncertainty is balanced against the court's need for a definitive settlement, and how these opposing principles can be reconciled. A valuable reference for researchers and practitioners in the field of survival analysis.

Between 25% and 50% of visits to primary care clinics are for somatic complaints with no identifiable organic pathology. While most people are reassured when told they are not ill, a certain percentage is convinced the doctor has missed something serious. For centuries, hypochondriasis and persistent somatic complaints have baffled physicians and mental health professionals alike. Recent decades, however, have seen advances in the understanding and treatment of this problem when it is considered a form of "health anxiety." In this highly practical and accessible book, Jonathan Abramowitz and Autumn Braddock present a model of health anxiety and hypochondriasis grounded in the most up-to-date clinical science and that incorporates physiological, cognitive, and behavioral processes. They also offer a step-by-step guide to assessment, conceptualization, and psychological treatment that is derived from this model and integrates strategies for psychoeducation, cognitive therapy, behavioral therapy (exposure and response prevention), and dealing with resistance to treatment. The book is packed with illustrative clinical examples and therapist-patient dialogues. Sample forms and handouts are also provided. This volume, which also addresses motivational problems and other common obstacles in treating individuals with health anxiety, is an essential resource for students and researchers in behavioral medicine and health psychology, and for anyone working with patients in hospitals, primary care settings, academic medical centers, and freestanding mental health clinics.
