When it comes to their personal transportation, today's youth have shunned the large, heavy performance cars of their parents' generation and instead embraced what has become known as the "sport compact"--smaller, lightweight, modern sports cars of predominantly Japanese manufacture. These cars respond well to performance modifications due to their light weight and technology-laden, high-revving engines. And by far, the most sought-after and modified cars are the Hondas and Acuras of the mid-'80s to the present. An extremely popular method of improving vehicle performance is a process known as engine swapping. Engine swapping consists

of removing a more powerful engine from a better-equipped or more modern vehicle and installing it into your own. It is one of the most efficient and affordable methods of improving your vehicle's performance. This book covers in detail all the most popular performance swaps for Honda Civic, Accord, and Prelude as well as the Acura Integra. It includes vital information on electrics, fit, and drivetrain compatibility, design considerations, step-by-step instruction, and costs. This book is must-have for the Honda enthusiast.

The first book of its kind, How to Rebuild the Honda B-Series Engines shows exactly how to rebuild the ever-popular Honda B-series engine. The book explains variations between the different B-series designations and elaborates upon the features that make this engine family such a tremendous and reliable design. Honda B-series engines are some of the most popular for enthusiasts to swap, and they came in many popular Honda and Acura models over the years, including the Civic, Integra, Accord, Prelude, CRX, del Sol, and even the CR-V. In this special Workbench book, author Jason Siu uses more than 600 photos, charts, and illustrations to give simple step-by-step

instructions on disassembly, cleaning, machining tips, pre-assembly fitting, and final assembly. This book gives considerations for both stock and performance rebuilds. It also guides you through both the easy and tricky procedures, showing you how to rebuild your engine and ensure it is working perfectly. Dealing with considerations for all B-series engines-foreign and domestic, VTEC and non-VTEC-the book also illustrates many of the wildly vast performance components, accessories, and upgrades available for B-series engines. As with all Workbench titles, this book details and highlights special components, tools, chemicals, and other accessories needed to get the job done right, the first time. Appendices are packed full of valuable reference information, and the book includes a Work-Along-Sheet to help you record vital statistics and measurements along the way. You'll even find tips that will help you save money without compromising top-notch results.

Chapters: List of Honda engines, Honda D engine, Honda B engine, Honda E engine, Honda K engine, Honda H engine, Honda F engine, Honda J engine, Honda C engine, Honda L engine, Honda B20A engine, Honda E07A engine, Honda R engine, Honda F20C engine, Honda A engine, GE Honda HF120, Honda N engine, Honda G engine, Honda P engine, Programmed fuel injection, 3-stage VTEC, Circle L engine, Vf500. Excerpt: This is a list of internal combustion engines models manufactured by Honda Motor Company of Japan. The Honda Insight hybrid contains a 1.0L 3-cylinder engine: The number in the engine code gives the approximate displacement of the engine. e.g. B18A would have an approximate displacement of 1.8L, H22A1 would have an approximate displacement of 2.2L. Some engines below were available in more than one market. B-series D-series VTEC E-series F-series H-series K-series L-series Circle L - General Motors/Isuzu 1.7 L Diesel R-series Diesel single-cylinder four-stroke The Honda CBX motorcycle (1978-1982) contains a 1047cc inline-6 cylinder engine. The engine used a DOHC 24-valve cam-over-bucket valvetrain to support high RPMs. Current Honda general purpose engines are air-cooled 4-stroke gasoline engines but 2-stroke, Diesel, water-cooled engines were also manufactured in the past. The current engine range provide from 1 to 22 hp (0.7 to 16.5 kW). More than 5 million of general purpose

engines were manufactured by Honda in 2009. Approximately 70% of the general purpose engines manufactured by Honda are supplied as OEM engines to other manufacturers of power products.
