The toxic costs of anger are well understood: sabotaged careers, alienated family and friends, and even physical damage to a point where illness or an early death can result. Unlike previous models of anger control that began by combating anger-provoking trigger thoughts at a relatively low level of anger, The Anger Control Workbook introduces you to a streamlined new approach that allows you to exercise control at a higher level of anger so that fewer steps are involved in managing all of your problem anger expressions. Throughout, the book offers techniques in a clear, step-by-step format, arranged to make it easy to tailor a program to your own personal obstacles and triggering events

### **Henry and Mudge Take the Big Test**

The user's manual for the rocket combustor interactive design (ROCCID) computer program is presented. The program, written in Fortran 77, provides a standardized methodology using state of

the art codes and procedures for the analysis of a liquid rocket engine combustor's steady state combustion performance and combustion stability. The ROCCID is currently capable of analyzing mixed element injector patterns containing impinging like doublet or unlike triplet, showerhead, shear coaxial, and swirl coaxial elements as long as only one element type exists in each injector core, baffle, or barrier zone. Real propellant properties of oxygen, hydrogen, methane, propane, and RP-1 are included in ROCCID. The properties of other propellants can easily be added. The analysis model in ROCCID can account for the influence of acoustic cavities, helmholtz resonators, and radial thrust chamber baffles on combustion stability. ROCCID also contains the logic to interactively create a combustor design which meets input performance and stability goals. A preliminary design results from the application of historical correlations to the input design requirements. The steady state performance and combustion stability of this design is evaluated using the analysis models, and ROCCID guides the user as to the design changes required to satisfy the user's performance and stability goals, including the design of stability aids. Output from ROCCID includes a formatted input file for the standardized JANNAF engine performance prediction procedure. Muss, J. A. and Nguyen, T. V. and Johnson, C. W. Unspecified Center

At this book's core is a critical edition of letters exchanged over 50 years between Anglo-Irish composer Elizabeth Maconchy (1907-1994) and the Welsh composer Grace Williams (1906-1977). These two innovative and talented women are highly regarded for their music, their professional activities and their roles in British musical life. The edition comprises around 200 letters from 1927 to 1977, none of which have been published before, along with scholarly introductions and contextualizations. Interwoven commentaries, in tandem with carefully constructed appendices, frame the letter texts. Moreover, the commentaries and introductory essays highlight and track the development of important themes and issues that characterize the study of twentieth-century British music today. This edition presents a dialogue, through both sides of a unique correspondence, offering an alternative commentary on musical and cultural developments of this period.
