Information and Business Intelligence

FOREWORD BY GUY KAWASAKI Presentation designer and internationally acclaimed communications expert Garr Reynolds, creator of the most popular Web site on presentation design and delivery on the Net — presentationzen.com — shares his experience in a provocative mix of illumination, inspiration, education, and guidance that will change the way you think about making presentations with PowerPoint or Keynote. Presentation Zen challenges the conventional wisdom of making "slide presentations" in today's world and encourages you to think differently and more creatively about the preparation, design, and delivery of your presentations. Garr shares lessons and perspectives that draw upon practical advice from the fields of communication and business. Combining solid principles of design with the tenets of Zen simplicity, this book will help you along the path to simpler, more effective presentations.

'A startling, provocative and potentially useful book' Sunday Times What blinkered Einstein and Edison? Why did Steve Jobs and NASA make lethal errors of judgement? How might environmental disaster and social inequality be averted? It is time for us to learn a new way of thinking. The twenty-first century presents complex problems that require a wiser way of reasoning, one that recognises our current limitations, tolerates ambiguity and uncertainty, balances multiple perspectives, and bridges diverse areas of expertise. Whatever our age and experience, whether a NASA scientist or a school student, we will benefit from wielding our minds with insight, precision, social sensitivity and humility. In an exhilarating journey through current research, drawing on insight from Socrates to Benjamin Franklin and some of the world's most successful industries, award-winning science journalist David Robson shows how to build a cognitive toolkit to help us all maximise our full potential.

transform our future more than any other technology—and there's nobody better qualified or situated to explore that future than Max Tegmark, an MIT professor who's helped mainstream research on how to keep AI beneficial. How can we grow our prosperity through automation without leaving people lacking income or purpose? What career advice should we give today's kids? How can we make future AI systems more robust, so that they do what we want without crashing, malfunctioning or getting hacked? Should we fear an arms race in lethal autonomous weapons? Will machines eventually outsmart us at all tasks, replacing humans on the job market and perhaps altogether? Will AI help life flourish like never before or give us more power than we can handle? What sort of future do you want? This book empowers you to join what may be the most important conversation of our time. It doesn't shy away from the full range of viewpoints or from the most controversial issues—from superintelligence to meaning, consciousness and the ultimate physical limits on life in the cosmos.

The ancient practices of meditation have much to teach us, but they're not well suited for our anxiety-driven modern life. Techniques such as mindfulness meditation once worked well, but today, only experienced meditators achieve calm, relaxed minds by focusing on mantras, breathing, or objects. We need a different approach to deal with anxiety. Beyond engaging daily our mind on self-

reflection, we need to frame each of the 1,440 minutes in a day around a natural, empathetic, and healthy lifestyle. Oscar Segurado, MD, PhD, has developed the practice of mindful framing and the associated NEO Chi lifestyle to address this unmet need. A physician-scientist passionate for integrative medicine, he experienced firsthand the emotional effects of anxiety even as he witnessed its impact on family, friends, and colleagues. As an immunologist, he knows too well how stress and anxiety trigger serious immune-mediated diseases, including cancer, chronic infections, and autoimmunity. Combining his medical knowledge with a lifelong interest in Ayurveda and Chinese medicine, Segurado developed and practices daily mindful framing and the NEO Chi lifestyle, designed with the modern world in mind. Supported with audiovisual materials, mindful framing defines a novel nature-minds-body connection for the twenty-first century. With just fifteen minutes of daily practice, you'll experience a more intimate connection with the natural world, emotional harmony with the minds around you, and a feeling of overall invigoration.

In this fascinating book, New Yorker business columnist James Surowiecki explores a deceptively simple idea: Large groups of people are smarter than an elite few, no matter how brilliant—better at solving problems, fostering innovation, coming to wise decisions, even predicting the future. With boundless erudition and in delightfully clear prose, Surowiecki ranges across fields as diverse as popular culture, psychology, ant biology, behavioral economics, artificial intelligence, military history, and politics to show how this simple idea offers important lessons for how we live our lives, select our leaders, run our companies, and think about our world.

Design doesn't have to be complicated, which is why this guide to human-centered design shows that usability is just as important as aesthetics. Even the smartest among us can feel inept as we fail to figure out which light switch or oven burner to turn on, or whether to push, pull, or slide a door. The fault, argues this ingenious --

even liberating -- book, lies not in ourselves, but in product design that ignores the needs of users and the principles of cognitive psychology. The problems range from ambiguous and hidden controls to arbitrary relationships between controls and functions, coupled with a lack of feedback or other assistance and unreasonable demands on memorization. The Design of Everyday Things shows that good, usable design is possible. The rules are simple: make things visible, exploit natural relationships that couple function and control, and make intelligent use of constraints. The goal: guide the user effortlessly to the right action on the right control at the right time. The Design of Everyday Things is a powerful primer on how -- and why -- some products satisfy customers while others only frustrate them.

As a major, public flagship university in the American South, so-called “Diversity University” has struggled to define its commitments to diversity and inclusion, and

to put those commitments into practice. In *Diversity Regimes*, sociologist James M. Thomas draws on more than two years of ethnographic fieldwork at DU to illustrate the conflicts and contingencies between a core set of actors at DU over what diversity is and how it should be accomplished. Thomas's analysis of this dynamic process uncovers what he calls "diversity regimes": a complex combination of meanings, practices, and actions that work to institutionalize commitments to diversity, but in doing so obscure, entrench, and even magnify existing racial inequalities. Thomas's concept of diversity regimes, and his focus on how they are organized and unfold in real time, provides new insights into the social organization of multicultural principles and practices.

particular, it investigates smart learning in smart cities, which extends the concept of smart learning to cover both formal and informal learning, and to support life-long learning. With digital technologies and the Internet becoming increasingly integrated into learning, the demand for smart learning has grown steadily, especially in smart city scenarios. As the need for life-long learning is on the rise, smart learning environments in cities should be equipped to meet people's demands. Smart learning/education is also one of the key applications of smart cities. Though the book's content mainly focuses on the educational technology field, research in cities and industries is also included. This book offers a valuable resource for graduate students in educational technology, smart learning environment and smart city researchers, cooperative university managers, and all others who are interested in smart learning industries.

Do you have what it takes to succeed in your career? The secret of success is not what they taught you in school. What matters most is not IQ, not a business school degree, not even technical know-how or years of expertise. The single most important factor in job performance and advancement is emotional intelligence. Emotional intelligence is actually a set of skills that anyone can acquire, and in this practical guide, Daniel Goleman identifies them, explains their importance, and shows how they can be fostered. For leaders, emotional intelligence is almost 90 percent of what sets stars apart from the mediocre. As Goleman documents, it's the essential ingredient for reaching and staying at the top in any field, even in high-tech careers. And organizations that learn to operate in emotionally intelligent ways are the companies that will remain vital and dynamic in the competitive marketplace of today—and the future.

The first-ever detailed, comprehensive history of intelligence, from Moses and Sun Tzu to the present day. The history of espionage is far older than any of today's intelligence agencies, yet the long history of intelligence operations has been largely forgotten. The codebreakers at Bletchley Park, the most successful World War II intelligence agency, were completely unaware that their predecessors in earlier moments of national crisis had broken the codes of Napoleon during the Napoleonic wars and those of Spain before the Spanish Armada. Those who do not understand past mistakes are likely to repeat them. Intelligence is a prime example. At the outbreak of World War I, the grasp of intelligence shown by U.S. President Woodrow Wilson and British Prime Minister Herbert Asquith was not in the same class as that of George Washington during the Revolutionary War and leading eighteenth-century British statesmen. In this book, the first global history of espionage ever written, distinguished historian Christopher Andrew recovers much of the lost intelligence history of the past three millennia—and shows us its relevance.

Your hard work is paying off. You are doing well in your field. But there is something standing between you and the next level of achievement. That something may just be one of your own annoying habits. Perhaps one small flaw - a behaviour you barely even recognise - is the only thing that's keeping you from where you want to be. It may be that the very characteristic that you believe got you where you are - like the drive to win at all costs - is what's holding you back. As this book explains, people often do well in spite of certain habits rather than because of them - and need a "to stop" list rather than one listing what "to do". PowerPoint was the first presentation software designed for Macintosh and Windows, received the first venture capital investment ever made by Apple, then became the first significant acquisition ever made by Microsoft, who set up a new Graphics Business Unit in Silicon Valley to develop it further. Now, twenty-five years later, PowerPoint is installed on more than one billion computers, worldwide. In this book, Robert Gaskins (who invented the idea, managed its design and development, and then headed the new Microsoft group) tells the story of its first years, recounting the perils and disasters narrowly evaded as a startup, dissecting the complexities of being the first distant development group in Microsoft, and explaining decisions and insights that enabled PowerPoint to become a lasting success well beyond its original business uses.

The definition of great leadership, backed by ground-breaking research When Execution Isn't Enough examines the essential leadership skills that go beyond simply executing strategies well. It examines the leadership skills that inspire excellence and drive growth. Great leaders think differently, but their secrets, values, and behaviors can't be bottled—or can they? Is leadership so contextual that it defies standardization? In this book, McKinsey's global head of leadership development draws on ground-breaking McKinsey research to uncover 20 distinct leadership traits. chasm between strong and weak organizations in terms of leadership effectiveness. Structured as a business parable, this book employs a rich cast of corporate characters to illustrate the critical behaviors of inspirational leadership and the outcomes that become possible. Attempting to nail down exactly what makes a leader inspirational is like trying to capture lightning in a bottle, but new McKinsey research has identified the behavioral leadership catalysts that inspire greatness. This book describes the behaviors to inspire that can be learned—to turn a good leader into a great leader. Understand the neuroscience of inspiration Tailor your inspirational approach to different leadership scenarios Initiate an inspiration cascade to influence people at scale The picture of leadership has changed over time. Today's great leaders are authentic, enthusiastic decision-makers with engaging visions, who are quick to communicate and take action. Less than half of all CEOs believe that their training investments will pay off, yet everyone agrees that leadership drives performance—where is the disconnect? It's in the belief that simple leadership behaviors equal results, forgetting that exceptional results only come from inspiration. When Execution Isn't Enough shows you how to attain the missing link of great leadership to bring exceptional results of your organization.
