Managing effectively across national and cultural boundaries is critical to the success of today's organisations, given the global environment of business and the increasing diversity of workforces. A keen awareness and a high degree of cross-cultural competence in management are therefore key to the career success of both present and aspiring managers/professionals. "" This, the third edition of " Understanding Cross-Cultural Management," " "has been adapted in line with the feedback from our many readers." "The book explores the key themes and issues in one of the most challenging and fascinating areas of business, organisational and social life. It does so in a manner that enables you to sharpen your insights and practical skills. "Understanding Cross-Cultural Management" offers a selective but broad view of classic and contemporary thinking on cultural management and encourages you to apply theories and ideas to practice - and to relate them to your own experience - through various examples and cases from the business world as well as through a range of practical activities, including: Cross-cultural concepts, which explain key ideas from leading theorists, thinkers and practitioners. Case studies (many of them based on articles from the " Financial Times"), dilemmas and points for reflection, which enable you to reflect internally and interact externally. Spotlights in every chapter, which briefly illustrate the concepts being described. Mini-cases with questions, which give consistent application of theory to practice.

Activities at the end of each chapter, as well as at the end of each of the book's three parts, which provide a broader and more integrated perspective on the material in question. These encourage you to develop both your cross-cultural management skills and a critical view of research done in this area. This book has been written for undergraduate and postgraduate students, as well as practising managers and professionals, who are studying cross-cultural and international management as part of either specialist international business programmes or general business-related qualifications. Marie-Joelle Browaeys is now freelance lecturer and researcher in cross-cultural management, affiliated to Nyenrode Business University, The Netherlands. Roger Price, formerly senior lecturer at Nyenrode Business University, The Netherlands, is a freelance coach, instructor and writer in the area of cross-cultural management."

Information Technology Project Management

The purpose of this book is to shed light on the performance and personal competencies of information technology (IT) project managers in South Africa. Predictive models are built to determine what project managers consider the crucial competencies they should possess to deliver an IT project successfully. This investigation takes place in the context of poor IT project success rates globally and, in particular, in South Africa. This novel research seeks to extend the debate on project success

beyond what constitutes success or failure, but seeks to find clarity in what IT project managers believe are the essential competencies in practice. This quantitative research gathered data by way of an online survey based on literature regarding the Project Management Competency Development Framework (PMCDF). The population consisted of IT project managers in South Africa. Four hundred and two respondents chose to share their insights. Through the use of descriptive and multivariate statistics, major competency factors were identified. These factors were used in structural equation modelling to build various validated predictive models. This book contributes to the current body of knowledge by uncovering the competencies that IT project managers consider themselves competent in. The structural equation models indicated predictors of perceived competence by IT project managers and where these perceived competencies differ from literature. Twelve managerial implications are highlighted in the final chapter that seek to draw the myriad threads together into a coherent summary. It is apparent that IT project managers do not consider the PMCDF important in its entirety, but instead choose to focus on certain competencies.
