This text emphasizes on nano and bio technologies, molecular level descriptions and understandings offered by statistical mechanics. This book provides an introduction to the simplest forms of Monte Carlo and molecular dynamics simulation (albeit only for simple spherical molecules) and user-friendly MATLAB programs for doing such simulations, and also some other calculations. The purpose of this book is to provide a readable introduction to statistical thermodynamics, show its utility and the way the results obtained lead to useful generalizations for practical application. The book also illustrates the difficulties that arise in the statistical thermodynamics of dense fluids as seen in the discussion of liquids.

A new and incisive analysis of the political viability of human rights, with an in-depth investigation of its largest violation: world hunger. Gonzalez-Pelaez develops John Vincent's theory of basic human rights within the context of the international political economy and demonstrates how the right to food has become an international norm enshrined within international law. She then assesses the international normative and practical dimensions of hunger in connection with international trade and poverty. Using the society of states as the framework of analysis, she explores the potential that the current system has to correct its own anomalies, and examines the measures that can move the hunger agenda forward in order to break through its current stagnation.

Jalil Muntaqim is a former member of the Black Panther Party and the Black Liberation Army. For over forty years, Jalil has been a political prisoner, and one of the New York Three (NY3), in retaliation for his political activism. Escaping the Prism Fade to Black is a collection of Jalil's poetry and essays, written from behind the bars of Attica prison. Combining the personal and the political, these texts afford readers with a rare opportunity to get to know a man who has spent most of his life-over forty years-behind bars for his involvement in the Black Liberation Movement of the 1960s and early 1970s. Jalil's poetry deals with a range of themes-spirituality, history, and the struggle for justice; depression, humor, and sexual desire; the pain and loneliness of imprisonment, the ongoing

racist oppression of New Afrikan people in the United States, and the need to find meaning in one's life. At the same time, his political essays show him to be as eager as ever to intervene in and grapple with the events of today, always with an eye to concretely improving the lives of the oppressed. Escaping the Prism Fade to Black also includes an extensive examination of the U.S. government's war against the Black Liberation Army in general, and Jalil and the New York Three in particular, by renowned scholar-activist Ward Churchill. In this highly detailed essay, "The Other Kind: On the Integrity, Consistency, and Humanity of Jalil Abdul Muntaqim," Churchill traces this story from the FBI's murderous COINTELPRO repression of the Black Panther Party, through the NEWKILL operation which led to the NY3's incarceration, to the more recent Phoenix Taskforce which orchestrated the re-prosecution of Jalil and other veteran Black activists, in the case of the San Francisco 8. With illustrations by revolutionary prisoner-artists Zolo Agona Azania and Kevin "Rashid" Johnson, as well as various outside artist-activists.

This book provides a solid introduction to the classical and statistical theories of thermodynamics while assuming no background beyond general physics and advanced calculus. Though an acquaintance with probability and statistics is helpful, it is not necessary. Providing a thorough, yet concise treatment of the phenomenological basis of thermal physics followed by a presentation of the statistical theory, this book presupposes no exposure to statistics or quantum mechanics. It covers several important topics, including a mathematically sound presentation of classical thermodynamics; the kinetic theory of gases including transport processes; and thorough, modern treatment of the thermodynamics of magnetism. It

### **An Introduction to Statistical Mechanics and Thermodynamics**

In *Yellow Steel*, the first overarching history of the earthmoving equipment industry, William Haycraft examines the tremendous increase in the scope of mining and construction projects, from the Suez Canal through the interstate highway system, made possible by innovations in earthmoving machinery. Led by Cyrus McCormick's invention in 1831 of a practical mechanical reaper, many of the builders of today's massive earthmoving machines began as makers of reapers, plows, threshers, and combines. Haycraft traces the efforts of manufacturers such as Caterpillar, Allis-Chalmers, International Harvester, J. I. Case, Deere, and Massey-Ferguson to diversify from farm equipment to specialized earthmoving equipment and the important contributions of

LeTourneau, Euclid, and others in meeting the needs of the construction and mining industries. He shows how postwar economic and political events, especially the creation of the interstate highway system, spurred the development of more powerful and more agile machines. He also relates the precipitous fall of several major American earthmoving machine companies and the rise of Japanese competitors in the early 1980s. Extensively illustrated and packed with detailed information on both manufacturers and machines, Yellow Steel knits together the diverse stories of the many companies that created the earthmoving equipment industry--how they began, expanded, retooled, merged, succeeded, and sometimes failed. Their history, a step-by-step linking of need and invention, provides the foundation for virtually all modern transportation, construction, commerce, and industry.
