### Flickering Pixels

Among the British troops bound for the Black Sea in May 1854 was a young officer in the 5th Dragoon Guards, Richard Temple Godman, who sent home throughout the entire Crimea campaign many detailed letters to his family at Park Hatch in Surrey. Temple Godman went out at the start of the war, took part in the

successful Charge of the Heavy Brigade at Balaklava and in other engagements, and did not return to England until June 1856, after peace had been declared. He took three very individual horses and despite all his adventures brought them back unscathed. Godmans dispatches from the fields of war reveal his wide interests and varied experiences; they range from the pleasures of riding in a foreign landscape, smoking Turkish tobacco, and overcoming boredom by donning comic dress and hunting wild dogs, to the pain of seeing friends and horses die from battle, disease, deprivation and lack of medicines. He writes scathingly about the skein of rivalries between the Generals (a good many muffs among the chiefs), inaccurate and highly coloured newspaper reports and, while critical of medical inefficiency, regards women in hospitals as a sort of fanaticism. Yet at other times he will employ the pen of an artist in describing a scene, or wax eloquent on the idiosyncrasies of horses. He is altogether a most gallant and sensitive young cavalryman, and deservedly went on to achieve high rank after the war. Always fresh and easy to read, his letters provide an unrivalled picture of what it was really like to be in the Crimea.

The human burden of infection caused by food-borne protozoan parasites is enormous; billions of people are infected world-wide and the DALY (disability-adjusted life year) toll due to these infections is correspondingly huge. Whilst some

infections may result in mild, relatively insignificant clinical disease, others may be seriously debilitating or even fatal. This book provides detailed insights into those protozoa who are currently most relevant regarding food-borne transmission. This book is intended to be of use and interest for a range of professionals, from researchers to regulators, from diagnosticians to parasitologists to food technologists; it should be read by those who work in academia, within the various branches of the food industry and food research associations, in government regulatory agencies, and in environmental health departments.

Much Ado About Nothing presents a battle of the sexes in more ways than one: as both a lightning-fast skirmish of wits between two famously disputatious lovers, and a near-deadly conflict built on conventions of gender and male rivalry. Claire McEachern's new introduction brings this best-seller right up to date, analysing recent developments in criticism and the latest productions of this comedy.

Geography of the Gaze offers a new history and theory of how the way we look at things influences what we see. Focusing on Western Europe from the seventeenth to nineteenth centuries, Renzo Dubbini shows how developments in science, art, mapping, and visual epistemology affected the ways natural and artificial landscapes were perceived and portrayed. He begins with the idea of the "view," explaining its role in the invention of landscape painting and in the definition of

landscape as a cultural space. Among other topics, Dubbini explores how the descriptive and pictorial techniques used in mariners' charts, view-oriented atlases, military cartography, and garden design were linked to the proliferation of highly realistic paintings of landscapes and city scenes; how the "picturesque" system for defining and composing landscapes affected not just art but also archaeology and engineering; and how the ever-changing modern cityscapes inspired new ways of seeing and representing the urban scene in Impressionist painting, photography, and stereoscopy. A marvelous history of viewing, *Geography of the Gaze* will interest everyone from scientists to artists.

Crying has fascinated mankind for millenia. Since ancient times, we have known that emotional tears are a unique human characteristic. Unsurprisingly, over hundreds of years, scholars from different backgrounds have speculated about the origin and functions of human tears. According to Charles Darwin, tears fulfilled no adaptive function. And yet, this seems in sharp contrast to statements in the popular media about the significance of crying. Crying is thought to bring relief and is considered healthy - and withholding tears unhealthy. In addition, tears have been said to inhibit aggression in assaulters and to promote social bonding. Perhaps that could explain why tears have been so important in our evolution. Ad Vingerhoets is one of the few scientists in the world to have studied crying. He examines in *Why only humans weep* which claims about crying are scientifically tenable - which are fact and which are fiction? Though a psychologist, he doesn't just restrict himself to the current psychological literature, but also explores work in evolutionary biology, neurosciences, theology, art, history, and anthropology to provide an integrated perspective on this complex phenomenon. Written throughout in an academically accessible style, this book is groundbreaking in contributing to a modern scientific understanding of crying. It will have broad appeal to psychologists, psychiatrists, philosophers, biologists, and

anthropologists.

The mad have always been with us. Bethlehem Hospital, or `Bedlam' as it became in cockney slang, is the world's oldest psychiatric hospital. Founded in 1247 it developed from a ramshackle hovel to the magnificent `Palace Beautiful', where visitors could pay to gawp at the chained inmates, through to the great Victorian hospital in Lambeth, now the Imperial War Museum. Catharine Arnold takes us on a tour of Bedlam and examines London's attitude to madness along the way. We travel through the ages, from the barbaric `exorcisms' of the medieval period to the Tudor belief that a roast mouse, eaten whole, was the cure. ### **Foodborne Parasitic Protozoa**

In the first half of the twentieth century, modernist works appeared not only in obscure little magazines and books published by tiny exclusive presses but also in literary reprint magazines of the 1920s, tawdry pulp magazines of the 1930s, and lurid paperbacks of the 1940s. In his nuanced exploration of the publishing and marketing of modernist works, David M. Earle questions how and why modernist literature came to be viewed as the exclusive purview of a cultural elite given its availability in such popular forums. As he examines sensational and popular manifestations of modernism, as well as their reception by critics and readers, Earle provides a methodology for reconciling formerly separate or contradictory materialist, cultural, visual, and modernist approaches to avant-garde literature. Central to Earle's innovative approach is his consideration of the physical aspects of the books and magazines - covers, dust wrappers, illustrations, cost - which become texts in their own right. Richly illustrated and accessibly written, Earle's study shows that modernism emerged in a publishing ecosystem that was both richer and more complex than has been previously documented.

### **Tempted by the Pack**

The United States and its joint forces must be able to respond to challenges across

the full spectrum of conflict. Our tendency as a country to ignore forms of conflict that are not conventional and kinetic in character has impeded our performance in the past and will continue to do so until we grasp the full set of conflict types. A variety of terms are used to describe unconventional forms of warfare: hybrid warfare, indirect warfare, the gray zone, and others. Americans are used to thinking of a binary state of either war or peace. That is the way our organizations, doctrine, and approaches are geared. Other countries, including Russia, China, and Iran, use a wider array of centrally controlled, or at least centrally directed, instruments of national power and influence to achieve their objectives. Whether it is contributing to foreign political parties, targeted assassinations of opponents, infiltrating non-uniformed personnel such as the little green men, traditional media and social media, influence operations, or cyber-connected activity, all of these tactics and more are used to advance their national interests and most often to damage American national interests. These tactics are not new. The historical records suggest that hybrid warfare in one form or another may well be the norm for human conflict, rather than the exception.
