Current Catalog

Nurse practitioners, physician assistants, and certified nurse-midwives : a policy analysis.

Prepared to Care

A spin-off publication of Health Law: Cases, Materials & Problems, 5th Edition, the text begins with an introduction to fundamental concepts affecting law and policy. The next chapter considers quality control in the health care setting. The following four chapters examine issues central to structuring integrated systems and the organization of health care institutions. It also covers the problem of health care access and cost control issues, with particular attention paid to the ongoing policy debate about the proper role of government and the nation's responsibilities to provide health care for indigent citizens. Examines legal oversight of private health financing, and looks at Medicare and Medicaid.

Making Midwives Legal

This new edition includes an updated preface that situates the themes of the book in the current debate over health care and midwifery, an epilogue that examines the major issues in the 1990s and comments on developments that have taken place over the past decade, and an updated bibliography.

Kratkie Otchety O Soveshchaniiakh

The delivery of high quality and equitable care for both mothers and newborns is complex and requires efforts across many sectors. The United States spends more on childbirth than any other country in the world, yet outcomes are worse than other high-resource countries, and even worse for Black and Native American women. There are a variety of factors that influence childbirth, including social determinants such as income, educational levels, access to care, financing, transportation, structural racism and geographic variability in birth settings. It is important to reevaluate the United States' approach to maternal and newborn care through the lens of these factors across multiple disciplines. Birth Settings in America: Outcomes, Quality, Access, and Choice reviews and evaluates maternal and newborn care in the United States, the epidemiology of social and clinical risks in pregnancy and childbirth, birth settings research, and access to and choice of

birth settings.

Official Records of the World Health Organization

Covering all advanced practice competencies and roles, this book offers strategies for enhancing patient care and legitimizing your role within today's health care system. It covers the history of advanced practice nursing, the theory behind the practice, and emerging issues. Offering a comprehensive exploration of advanced practice nursing, this edition also adds a focus on topics including the APN scope of practice, certification, and the ethical and legal issues that occur in clinical practice. The development of all major competencies of advanced practice nursing is discussed: direct clinical practice, consultation, coaching/guidance, research, leadership, collaboration, and ethical decision-making. Advanced practice competencies are discussed in relation to all advanced practice nursing and blended CNS-NP roles (case manager, acute care nurse practitioner), highlighting the shared aims and distinctions of each role. In-depth discussions on educational strategies explain how competencies develop as the nurses' practice progresses. A chapter on research competencies demonstrates how to use evidence-based research in practice, and how to promote these research competencies to other APNs. A conceptual framework shows the clear relationship between the competencies, roles, and challenges in today's health care environment. Practical strategies are provided for business management, contracting, and marketing.

Comprehensive information covers the essential competencies of the new Doctor of Nursing Practice degree. More exemplars (case studies) provide real-life scenarios showing APN competencies in action. A new chapter shows how to provide reliable and valid data to substantiate your impact and justify equitable reimbursement for APN services, also enhancing your skills in quality improvement strategies, informatics, and systems thinking. Information on telehealth considerations covers the new sources of electronic healthcare information available to patients and describes how to counsel them on using reliable resources.

Legislation Concerning Nursing/midwifery Services and Education

In Alberta, nurses have been central to the development of health care and to the growth of hospitals from the early settlement days. Nursing was an early and fundamental part of social organizations in the province. Ross Kerr follows the development in Alberta of public health nursing, district nursing, the evolution of nursing as a professional discipline, nursing education and organized nursing through the Alberta Association of Registered Nurses.

Nurse Practitioners, Physician Assistants, and Certified Nurse-midwives

The Future of Nursing explores how nurses' roles, responsibilities, and education should change significantly to meet the increased demand for care that will be created by health care reform and to advance improvements in America's increasingly complex health system. At more than 3 million in number, nurses make up the single largest segment of the health care work force. They also spend the greatest amount of time in delivering patient care as a profession. Nurses therefore have valuable insights and unique abilities to contribute as partners with other health care professionals in improving the quality and safety of care as envisioned in the Affordable Care Act (ACA) enacted this year. Nurses should be fully engaged with other health professionals and assume leadership roles in redesigning care in the United States. To ensure its members are well-prepared, the profession should institute residency training for nurses, increase the percentage of nurses who attain a bachelor's degree to 80 percent by 2020, and

double the number who pursue doctorates. Furthermore, regulatory and institutional obstacles -- including limits on nurses' scope of practice -- should be removed so that the health system can reap the full benefit of nurses' training, skills, and knowledge in patient care. In this book, the Institute of Medicine makes recommendations for an action-oriented blueprint for the future of nursing.

Nurse Anesthesia E-Book

Federal Employees Health Benefits Legislation

"Who is a nurse?" and "What is nursing?" seem to be simple questions yet the answers are strangely elusive. This book explores the variations in structure and organization of the nursing workforce across the different countries of Europe. This diversity, and the reasons for it, are of more than academic interest. The work of nurses has always had a critical impact on patient outcomes. As health systems shift radically in response to rising demand, the role of nurses becomes even more important. This book is part of a two-volume study on the contributions that nurses make to strengthening health systems. This is the first time that the topic of nursing has been dealt with at length within the Observatory Health Policy Series. The aim is to raise the profile of nursing within health policy and draw the attention of decision-makers. Part 1 is a series of national case studies drawn from Belgium, England, Finland, Germany, Greece, Ireland, the Netherlands, Norway, Poland, Spain, Sweden, and Switzerland. The countries were chosen as the subject of a large EU-funded study of nursing (RN4Cast). Lithuania and Slovenia were added to provide broader geographical and policy reach. Part 2, to be published later this

year, will provide thematic analysis of important policy issues such as quality of care, workforce planning, education and training, regulation and migration. The lessons learned from comparative case-study analysis demonstrate wide variation in every dimension of the workforce. It examines what a nurse is; nurse-to-doctor and nurse-to-population ratios; the education, regulation and issuing of credentials to nurses; and the planning of the workforce. While comparative analysis across countries brings these differences into sharp relief, it also reveals how the EU functions as an important "binding agent," drawing these diverse elements together into a more coherent whole.

roles of the primary health care nurse are considered: direct care provider, educator of health personnel and the public, supervisor/manager of primary health care services, and health care researcher/evaluator. Attention is also directed to: nursing tasks in primary health care, basic and continuing nursing education for primary health care, legal barriers to nursing training and practice, legislative strategies to expand nursing functions, assessing a country's health needs, and developing policy and legislation. Recommendations are offered for: regulating nursing education; redesigning educational programs; regulating nursing functions; and strengthening nursing boards, the role of national nursing organizations, and the role of WHO. Strengthening Health Systems Through Nursing

Health Care for All, Challenge for Nursing

A General Outline of Public Health Care in Indonesia, 1964

The standard text in the field, Health Law: Cases, Materials and Problems provides an overview of health law as it affects professionals, institutions, and entities that deliver and finance U.S. health care. The expert authors' comprehensive treatment focuses on concerns such as the oversight of quality, control costs, adequate

access to services, patient protection, tax issues, the Employee Retirement Income Security Act (ERISA), and malpractice litigation. Written without a policy bias to fairly reflect all viewpoints, the soft-cover one-volume book considers the legal and ethical issues involving death, human reproduction, medical treatment decision making, and medical research. It also explores the government's efforts to control costs and expand access through Medicare and Medicaid and examines government attempts to police anticompetitive activities, fraud, and abuse. Using carefully edited primary materials and effective classroom-tested problems, the book exposes students to the core issues in health law.
