Used both as a pedagogical tool and a reference. This work is used for any introductory programming course that includes Unix and for advanced courses such as those on Operating Systems and System Administration. It contains over 900 exercises and self-test questions. This book also features coverage of Linux, where Linux differs from UNIX.

The Wran Era

This book presents a focused and accessible primer on the fundamentals of Java programming, with extensive use of examples and hands-on exercises. Topics and features: provides an introduction to variables, input/output and arithmetic operations; describes objects and contour diagrams, explains selection structures, and demonstrates how iteration structures work; discusses object-oriented concepts such as overloading and classes methods, and introduces string variables and processing; illustrates arrays and array processing and examines recursion; explores inheritance and polymorphism and investigates elementary files; presents a primer on graphical input/output, discusses elementary exception processing, and presents the basics of Javadoc; includes exercises at the end of each chapter, with selected answers in an appendix and a glossary of key terms; provides additional supplementary information at an associated website.

Rock, Paper, Scissors

The idea for this book was conceived by the late Dr. Irvine A. Watson of the University of Sydney, and he developed the first outline. I was then invited by Dr. Watson to share in its writing. Unfortunately, shortly there after, recurring heart problems forced him to curtail his activities and with draw from the project. He died before the book could be completed. Dr. Watson's intention was to produce a very practical book that would provide wheat breeders with all of the information necessary to breed success fully for resistance to the three wheat rusts: leaf rust, stem rust, and yellow rust. It was intended to be very specific in describing procedures to be used and at the same time provide all of the necessary theoretical background. I hope that I have been successful in meeting these objectives. The book assumes that the reader has some knowledge of plant pathology, genetics, and plant breeding. Extensive use has been made of the literature, but it was not possible to cite all of the papers on a given topic. In making a choice, an attempt was made to choose key papers or more recent papers that provided references to the earlier literature. Acknowledgements This book was written partly at the University of Saskatchewan and partly at the University of California, Davis, while I was on a sabbatical leave.

It's up to the Changers to rescue their friend Mack from the enemy—but in order to do that, they must first break an ancient curse—in the seventh action-packed novel of The Hidden World of Changers series! Fiona, Mack, Gabriella, and Darren are Changers, a magical line of shapeshifters that can transform into mythological creatures, from werewolves and selkies to lightning birds and spirit foxes. Mack has abandoned his friends to join their enemy, the Shadow Fox. Gabriella wants to find Mack as soon as possible, but it's too dangerous. The Changers need magical protection before they confront the Shadow Fox again. Luckily, the First Four have found a protection spell that will guard Darren against the Shadow Fox's dark powers. There's only one problem: The spell won't work. Darren's ancestors were cursed long ago during an ancient war, and the only way to enact the protection spell is to break the curse. To do that, Darren will have to find a descendent of the one who cursed his ancestor. Will Darren be able to find someone to break the curse…or will he and his family suffer the Spider's Curse for all time?

Mobile Web 2.0

From basic concepts to research grade material, Mobile Web 2.0: Developing and Delivering Services to Mobile Devices provides complete and up-to-date coverage of the range of technical topics related to Mobile Web 2.0. It brings together the work of 51 pioneering experts from around the world who identify the major challenges in Mobile Web 2.0 applications and provide authoritative insight into many of their own innovations and advances in the field. To help you address contemporary challenges, the text details a conceptual framework that provides modeling facilities for context-aware, multi-channel Web applications. It compares various platforms for developing mobile services—from the developer and user perspectives—and explains how to use high-level modeling constructs to drive the application development process through automatic code generation. Proposes an expanded model of mobile application context Explores mobile social software as an Information and Communications Technology (ICT) Discusses the effect of context on mobile usability Through empirical study, the book tests a number of hypotheses on the use of software implementation technology and location context in mobile applications. It introduces Reusable End-User Customization (REUC)—a technique that allows users to adapt the layout of Web pages and automatically reapplies those preferences on subsequent visits. It also investigates the need for non-visual feedback with long system response times, particularly when downloading Web pages to mobile devices.

BMW 7 Series (E38) Service Manual: 1995-2001

Praised by Entertainment Weekly as "the man who put the fizz into physics," Dr. Len Fisher turns his attention to the science of cooperation in his lively and thought-provoking book. Fisher shows how the modern science of game theory has helped biologists to understand the evolution of cooperation in nature, and investigates how we might apply those lessons to our own society. In a series of experiments that take him from the polite confines of an English dinner party to crowded supermarkets, congested Indian roads, and the wilds of outback Australia, not to mention baseball strategies and the intricacies of quantum mechanics, Fisher sheds light on the problem of global cooperation. The outcomes are sometimes hilarious, sometimes alarming, but always revealing. A witty romp through a serious science, Rock, Paper, Scissors will both teach and delight anyone interested in what it what it takes to get people to work together.

Siren's Call

For over a decade, from 1976 to 1986, Neville Wran led the most successful Labor Government in New South Wales history.Now, for the first time, key ministers, advisers, public servants, party and union officials, and Wran himself, provide a critical retrospective on the era and its legacy today.It was an era of unrivalled electoral success - four electoral victories were won, including two 'Wranslides' in 1978 and 1981. Wran was a hugely popular leader who galvanised Labor supporters around the nation, and provided the model for modern Labor leadership and government.It was also an era of sound economic management and moderate progressive reform which transformed New South Wales in ways taken for granted

today.Significant policy achievements, and some mistakes, are noted in health, education, transport, conservation, consumer affairs, Aboriginal affairs, the status and rights of women, industrial relations, anti-discrimination and equal opportunity law reform, the arts and heritage protection, the public service, and electoral and institutional reform.The contributions cover key policy areas, politics and elections. The candid views of the main players are balanced with those of academics, journalists and commentators. The Wheat Rusts — Breeding for Resistance

The French Dominican theologian Yves Congar is recognized by many as the most important Roman Catholic ecclesiologist of the 20th century. He was the thinker behind some of the major decrees of the Second Vatican council. He was also a leader in the ecumenical movement in Europe throughout most of the century. Despite his importance, there are few books about Congar in English. Congar's pneumatology, argues Groppe, can enrich various ongoing theological discussions, including reflection as to whether the church should be hierarchical or a democracy, the development of "persons in communion" as a framework for contemporary theological anthropology and ecclesiology, and deliberations about the personhood of the Holy Spirit.

It often seems that different crises are competing to devastate civilization. This book argues that financial meltdown, dwindling oil reserves, terrorism and food shortages need to be considered as part of the same ailing system. Most accounts of our contemporary global crises such as climate change, or the threat of terrorism, focus on one area, or another, to the exclusion of others. Nafeez Ahmed argues that the unwillingness of experts to look outside their specialisations explains why there is so much disagreement and misunderstanding about particular crises. This book attempts to investigate all of these crises, not as isolated events, but as trends and processes that belong to a single global system. We are therefore not dealing with a "clash of civilizations," as Huntington argued. Rather, we are dealing with a fundamental crisis of civilization itself. This book provides a stark warning of the consequences of failing to take a broad view of the problems facing the world.
