The Upside of Irrationality

The Leo Baeck Institute, which has offices in London, New York, and Jerusalem, has a long and distinguished history. It was founded in 1955 for the study of the history

and culture of German-speaking Central European Jewry and named in honor of the man who was the last representative figure of German Jewry in Germany during the Nazi period. The Year Book was established the following year and has since then gained a world-wide reputation for the consistently high quality of its volumes. In 1956, with the exception of the Holocaust history, scholarship of the centuries of German-speaking Jewry and its vital role in Central European history was almost extinguished. It is in no small measure due to the Year Book's editors and its international contributors, Jewish and non-Jewish scholars alike, that the study of Central European Jewry, from early modern times to the postwar period, its impact on European history and the history overseas, flourishes.

Seven Times Smarter

With all the warnings against women being pregnant after 35, I started to observe people who are pregnant during the "late age". I cursed myself for not having this urge when I was 30, not a couple of years away from 40. Well, Nicole Kidman was having her first baby at 41, but obviously I'm not a Hollywood starlet with an army of top-notch doctors and babysitters. Or should I opt for adoption instead?

First Year Teacher's Survival Guide

This first report deals with some of the major development issues confronting the developing countries and explores the relationship of the major trends in the international economy to them. It is designed to help clarify some of the linkages between the international economy and domestic strategies in the developing countries against the background of growing interdependence and increasing complexity in the world economy. It assesses the prospects for progress in accelerating growth and alleviating poverty, and identifies some of the major policy issues which will affect these prospects.

What Your Birthday Reveals About You

Inequality of opportunity, both within and among nations, sustains extreme deprivation, results in wasted human potential and often weakens prospects for overall prosperity and economic growth, concludes the 2006 World Development Report. To correct this situation and reduce poverty more effectively, Equity and Development recommends ensuring more equitable access by the poor to health care, education, jobs, capital, and secure land rights, among others. It also calls for greater equality of access to political freedoms and political power, breaking down stereotyping and discrimination, and improving access by the poor to justice systems and infrastructure. To level the playing field among countries, and thereby reduce global inequities that hurt the poor in developing countries, the report calls for removal of trade barriers in rich countries, flexibility to allow greater immigration of lower-skilled people from developing countries, and increased -- and more effective -- development assistance.

What Is Smart? There's evidence of so much more than "reading, writing, and 'rithmetic" in every child -- at least seven distinct intelligences, according to the theory of multiple intelligences, developed by Harvard's Dr. Howard Gardner. In *Seven Times Smarter*, veteran educator Laurel Schmidt offers a parent-friendly explanation of this theory and of the ways that kids are -- simply put -- word smart, picture smart, music smart, body smart, logic smart, people smart, and self-smart. These intelligences aren't fixed at birth. They can be nurtured and strengthened, meaning that in the right environment, kids get smarter. *Seven Times Smarter*, an invaluable resource for parents, teachers, and caregivers, provides the perfect way to create this environment. Unlike other craft or activity books that just fill time and keep kids busy, *Seven Times Smarter* prompts kids aged six to fourteen to work their brains and cultivate new skills using recycled or low-cost materials found in every home -- and enjoy it! It offers an exploration of what it means to be smart, checklists to recognize the seven intelligences in your child, book lists to develop and celebrate all the ways your child is smart, and fifty creative, constructive activities that are good for kids playing alone or in a group, supervised

or independently, including: * Memory Tours -- If a memory book is too straightforward for your artistic child, try an un-book, a memory box, or a calendar. * Hanging Gardens -- Indoors or out, even the smallest garden plot can yield a bumper crop of mathematical, linguistic, scientific, and kinesthetic skills. * The Boredom Brigade -- Boredom is a springboard for imagination; imaginary structures, identities, occupations, and friends are just some of the ways kids develop their inter- and intra-personal intelligences. * Junk Yard Genius -- There's an education in junk; in fact, it's easy to turn your broken radio, alarm clock, fan, blow-dryer, or scale into a project that could fascinate kids for days. From the Trade Paperback edition.

Methods of Critical Discourse Analysis

PREFACE. THE Author of this very practical treatise on Scotch Loch - Fishing desires clearly that it may be of use to all who had it. He does not pretend to have written anything new, but to have attempted to put what he has to say in as readable a form as possible. Everything in the way of the history and habits of fish has been studiously avoided, and technicalities have been used as sparingly as possible. The writing of this book has afforded him pleasure in his leisure moments, and that pleasure would be much increased if he knew that the perusal of it would create any bond of sympathy between himself and the angling community in general. This section is interleaved with blank sheets for the readers notes. The Author need

hardly say that any suggestions addressed to the case of the publishers, will meet with consideration in a future edition. We do not pretend to write or enlarge upon a new subject. Much has been said and written-and well said and written too on the art of fishing but loch-fishing has been rather looked upon as a second-rate performance, and to dispel this idea is one of the objects for which this present treatise has been written. Far be it from us to say anything against fishing, lawfully practised in any form but many pent up in our large towns will bear us out when we say that, on the whole, a days loch-fishing is the most convenient. One great matter is, that the loch-fisher is dependent on nothing but enough wind to curl the water, -and on a large loch it is very seldom that a dead calm prevails all day, -and can make his arrangements for a day, weeks beforehand whereas the stream-fisher is dependent for a good take on the state of the water and however pleasant and easy it may be for one living near the banks of a good trout stream or river, it is quite another matter to arrange for a days river-fishing, if one is looking forward to a holiday at a date some weeks ahead. Providence may favour the expectant angler with a good day, and the water in order but experience has taught most of us that the good days are in the minority, and that, as is the case with our rapid running streams, -such as many of our northern streams are, -the water is either too large or too small, unless, as previously remarked, you live near at hand, and can catch it at its best. A common belief in regard to loch-fishing is, that the tyro and the experienced angler have nearly the same chance in fishing, -the one from the stern and the other from the bow of the same boat. Of all the absurd beliefs as

to loch-fishing, this is one of the most absurd. Try it. Give the tyro either end of the boat he likes give him a cast of ally flies he may fancy, or even a cast similar to those which a crack may be using and if he catches one for every three the other has, he may consider himself very lucky. Of course there are lochs where the fish are not abundant, and a beginner may come across as many as an older fisher but we speak of lochs where there are fish to be caught, and where each has a fair chance. Again, it is said that the boatman has as much to do with catching trout in a loch as the angler. Well, we dont deny that. In an untried loch it is necessary to have the guidance of a good boatman but the same argument holds good as to stream-fishing

Development and the Next Generation

Born on December 3rd? You're an ambitious, hardworking "idea person" and a dynamic leader. Born on December 14th? You're the "traveling salesperson" of the zodiac and a gifted marketer. All Sagittarians are charming, intelligent, and adventure-seeking, but which day of the month you're born on can determine the way in which you use those traits to your best advantage. In this exciting new book, master astrologer Phyllis Vega gives a detailed analysis for each birthday in the year, combining astrology and numerology to paint a true picture of the characteristics, desires, and destinies of people born on that day. If you were born October 5th, you're a skilled negotiator with a gift for making money. But if you

were born just four days later, you're a compassionate dreamer with spiritual inclinations. Aries is the sign of the determined ram, but if you were born on April 7th, you are idealistic and inspiring.

Microfinance has long been recognized as having significant potential to create jobs and reduce poverty. But to meet the twin challenges of growth and sustainability, managers of microfinance institutions (MFIs) must not only understand essential management functions: they must also be armed with innovative ideas and strategies to succeed in today's increasingly competitive environment. This book provides a valuable overview of the key management principles necessary to optimize the services of MFIs. Volume 1 examines the markets and marketing of MFIs and captures the different ways that managers can communicate the value of their products and services. It offers strategies to prevent risk from occurring and, if it does occur, explains how to rectify the situation. Practical techniques for allocating costs and determining prices are also

highlighted, as well as the importance of plans, budgets and reports. Volume 2 includes chapters on various product options, including savings, insurance, leasing, money transfers, and even grants and nonfinancial services. It also explores how to combine different product menus to serve specific market segments, such as the ultra-poor, youth, women, and small and medium enterprises. It provides specific suggestions to manage diversification, including adapting the institutional culture, redistributing responsibilities, empowering staff, communicating with clients, reengineering systems, and managing change.

The Future of Business Schools

In this textbook the authors present first-year geometry roughly in the order in which it was discovered. The first five chapters show how the ancient Greeks established geometry, together with its numerous practical applications, while more recent findings on Euclidian geometry are discussed as well. The following three chapters explain the revolution in geometry due to the progress made in the field of algebra by Descartes, Euler and Gauss. Spatial geometry, vector algebra and matrices are treated in chapters 9 and 10. The last chapter offers an introduction to projective geometry, which emerged in the 19th century. Complemented by numerous examples, exercises, figures and pictures, the book offers both motivation and insightful explanations, and provides stimulating and enjoyable reading for students and teachers alike.

This fascinating Japanese culture and business guide explains how bushido samurai culture has influenced modern Japanese behavior and business practices. Bushido, the ethical system of Japan's famous samurai class, which ruled the country from 1192 until 1868, eventually came to encompass every aspect of the lives of the people—their philosophical and spiritual beliefs, their etiquette, their family life, their dress, their work, their aesthetic sense, even their recreation. In *The Japanese Samurai Code*, Japanologist Boye Lafayette De Mente attempts to identify the positive factors in Bushido that were primarily responsible for the astounding economic success of the Japanese, and still today play a vital role in their economic prowess. Perfect for those interested in doing business in, or with, Japan, or just trying to improve their own personal skills and performance, this book is a success manual for people in any endeavor. Chapters include: The Power of the Samurai Culture—*Kyoui no Bushi Bunka* The Spirit that Motivates the Japanese—*Nihonjin no Seishin* Taking the Best & Leaving the Rest—*Shusha Sentaku no "Myou"* The Power of Dignity—*Hinkaku no Chikara* The Samurai Work Ethic—*Bushi no Roudoh Rinri* Knowing Without Being Told—*Anmoku no Ryokai* Adjusting to Change—*Henka ni Taiou* The Discriminating Mind—*Urusai no Hitotachi* and more!

European Business Schools tend to imitate their North American counterparts in an attempt to catch up in the worldwide competition for knowledge creation and training in management. Is this relevant? To what extent do business schools in Europe contribute to competitiveness of the economy? What will be the impact of new technologies, e.g. on executive education? Will there be a European job market for business professors? Will market forces win against state owned universities? The book compares the current institutional setting of business schools in various countries and presents five foresight scenarios for 2020.

The Road to Academic Excellence

This book is designed as an introduction to Critical Discourse Analysis (CDA) and gives an overview of the various theories and methods associated with this sociolinguistic approach. It also introduces the reader to the leading figures in CDA and the methods to which they are most closely related. The text aims to provide a comprehensive description of the individual methods, an understanding of the theories to which methods refer and a comparative treatment of each of these methods so that students may be able to determine which is the most appropriate to select for their particular research question. Given the balance between theory and application, plus the intended audience - no previous knowledge of CDA is assumed - *Methods of Critical Discourse Analysis* should be useful reading for both students and researchers in the fields of linguistics, sociology, social psychology and the social sciences in general.

This survey provides a brief and selective overview of research in the philosophy of mathematics education. It asks what makes up the philosophy of mathematics education, what it means, what questions it asks and answers, and what is its overall importance and use? It provides overviews of critical mathematics education, and the most relevant modern movements in the philosophy of mathematics. A case study is provided of an emerging research tradition in one country. This is the Hermeneutic strand of research in the philosophy of mathematics education in Brazil. This illustrates one orientation towards research inquiry in the philosophy of mathematics education. It is part of a broader practice of 'philosophical archaeology': the uncovering of hidden assumptions and buried ideologies within the concepts and methods of research and practice in mathematics education. An extensive bibliography is also included.
