From quantum mechanics, we can anticipate some modifications to the model. Here, an electron excited with a driving force at the resonance frequency (ω_0) can only be excited to another specific resonance state/energy level (ω_{0N}), dictated by the laws of quantum mechanics, or if the applied force is sufficient, released from the atom/molecule.

We investigated the influence of CO₂-induced geochemical reactions on the cohesive-frictional properties of host rock within the context of CO₂ storage in a saline aquifer and focused on the Mt. Simon sandstone. The research objective was to model geo-mechanical changes due to host rock exposure to CO₂-saturated brine while accounting for heterogeneity, double-scale porosity, and granular

Bing: Mechanics Of Solids Crandall Solution

The graphical solution to the problem is shown in Figure 12.13, where the triangle ABC represents the feasible set for the QP subproblem. Cost function contours are circles of different radii. The optimum solution is at point D, where $d_1 = 1$ and $d_2 = 1$. Note that the QP subproblem is strictly convex and thus has a unique solution.
