Hospital Billing from a to Z

Increasingly over the past five years, uncertainty about reimbursement for routine patient care has been suspected as contributing to problems enrolling people in clinical trials. Clinical trial investigators cannot guarantee that Medicare will pay for the care required, and they must disclose this uncertainty to potential participants during the informed consent process. Since Medicare does not routinely "preauthorize" care (as do many commercial insurers) the uncertainty cannot be dispelled in advance. Thus, patients considering whether to enter trials must assume that they may have to pay bills that Medicare rejects simply because they have enrolled in the trial. This report recommends an explicit policy for reimbursement of routine patient care costs in clinical trials. It further recommends that HCFA provide additional support for selected clinical trials, and that the government support the establishment of a national clinical trials registry. These policies (1) should assure that beneficiaries would not be denied coverage merely because they have volunteered to participate in a clinical trial; and (2) would not impose excessive administrative burdens on HCFA, its fiscal intermediaries and carriers, or investigators, providers, or participants in clinical trials. Explicit rules would have the added benefit of increasing the uniformity of reimbursement decisions made by Medicare fiscal intermediaries and carriers in different parts of the country. Greater uniformity would, in turn, decrease the uncertainty about reimbursement when providers and patients embark on a clinical trial.

Coders' Desk Reference for Procedures 2019

The Coders' Desk Reference for ICD-10-PCS Procedures addresses the challenge of translating common procedural nomenclature used by providers to the corresponding ICD-10-PCS coding terminology. Because provider documentation often does not reflect the precise terminology found in ICD-10-PCS, correct procedure coding is dependent on the ability of the coder to translate common procedural terminology to the appropriate procedural terminology of ICD-10-PCS. This resource is organized by common procedural nomenclature used in the hospital setting and then linked to the related root operation table(s); the procedure is described in layman's terms, translated to ICD-10-PCS root operation terminology, and the corresponding root operation table(s) is identified.

This first-of-its-kind book provides an overview of what outpatient CDI entails, covers industry guidance and standards for outpatient documentation, reviews the duties of outpatient CDI specialists, and examines how to obtain backing from leadership. Accurate documentation is important not just for code assignment, but also for a variety of quality and reimbursement concerns. In the past decade, outpatient visits increased by 44% while hospital visits decreased by nearly 20%, according to the Medicare Payment Advisory Commission. However, just because physicians are outside the hospital walls doesn't mean they're free from documentation challenges. For these reasons, CDI programs are offering their assistance to physician practices, ambulatory surgical centers, and even emergency rooms. This book will explore those opportunities and take a look at how others are expanding their record review efforts in the outpatient world. This book will help you: Target the outpatient settings that offer the

The United States has the highest per capita spending on health care of any industrialized nation but continually lags behind other nations in health care outcomes including life expectancy and infant mortality. National health expenditures are projected to exceed \$2.5 trillion in 2009. Given healthcare's direct impact on the economy, there is a critical need to control health care spending. According to The Health Imperative: Lowering Costs and Improving Outcomes, the costs of health care have strained the federal budget, and negatively affected state governments, the private sector and individuals. Healthcare expenditures have restricted the ability of state and local governments to fund other priorities and have contributed to slowing growth in wages and jobs in the private sector. Moreover, the number of uninsured has risen from 45.7 million in 2007 to 46.3

million in 2008. The Health Imperative: Lowering Costs and Improving Outcomes identifies a number of factors driving expenditure growth including scientific uncertainty, perverse economic and practice incentives, system fragmentation, lack of patient involvement, and under-investment in population health. Experts discussed key levers for catalyzing transformation of the delivery system. A few included streamlined health insurance regulation, administrative simplification and clarification and quality and consistency in treatment. The book is an excellent guide for policymakers at all levels of government, as well as private sector healthcare workers.
