David Busch's Nikon Z5 Guide to Digital Photography

This book is an introduction to digital photography through the microscope in which readers will learn about the three camera types used in photomicrography (point and shoot consumer cameras, digital single lens reflex cameras, and professional (scientific) photomicrography instruments) and the advantages and disadvantages of each. For example, the point and shoot camera has the benefit of a live, real-time preview, active histogram, potential infrared sensitivity, low cost, and video recording capability. Its disadvantages are noise at low light levels and limited dynamic range. A digital single lens reflex has, at low magnification, the advantages of an accurate and sharp focusing screen, low noise at low light levels, and good dynamic range. This camera provides the potential of equaling the quality of scientific cameras but at a fraction of the cost. Its only weakness is the ergonomic deficiencies resulting from having the camera mounted on a microscope. The scientific grade cameras provide the highest image quality with ease of operation. Unfortunately, such cameras are expensive (\$6000) and are found, most commonly, in research laboratories. However, such cameras are still within the financial reach of enthusiasts who can afford a professional-level digital single lens reflex. Prices for these types of cameras are dropping and it is anticipated that cameras of this type will be available at \$2000-3000 in the next year. A thorough presentation will be made of the methods of attaching the cameras to the microscope and the ergonomics of image acquisition, as well as

detailed discussions on microscope illuminators and lighting systems, so that the reader understands such basic image acquisition procedures as obtaining white balance, determining resolution, and edge enhancement. There will be chapters on imaging transparent specimens using darkfield, phase contrast, differential interference contrast, oblique illumination, and Rheinberg illumination. These skills will enable the reader to obtain professional results and will be valuable to the professional photomicrographers as well as the photographic enthusiast.

Some photographers make portraits that we can't take our eyes off of. These images create mood, evoke emotion, and pique our curiosity. They have that certain something that other portraits seem to lack. These rare images are memorable—the kind of shots that clients want and photographers strive to emulate. These portraits are technically precise and have style. Neil van Niekerk is a big name in the portrait and wedding photography industry. His masterful photographs get a reaction, and he's devoted to helping others create compelling portraits for their clients. In this book, van Niekerk shows readers strategies for creating a wide range of portrait looks (romantic, fun, sweet, dramatic, glamorous, or moody) in lackluster, middle-of-nowhere locales, small home studios, big expanses, and even on rooftops. Starting with traditional lighting and posing strategies and moving through "spicier" varieties, he shows readers how integrating specialized lighting (rim lighting, backlighting, flare, and low-key lighting—using natural light and artificial sources) and compositional approaches (shallow depth of field, lens compression, and unorthodox perspectives) into their

creative approach can allow them to take full creative control over their portrait-taking process so that they're able to deliver incredible shots of their clients in any photographic conditions.

This book is a reflection on the subjects and places that made the deepest impression on the author during his years spent in Eastern Africa. His interest and skill in capturing the emotions of wild animals, their resilience and beauty make it unique. The author has sought out the most dramatic weather conditions for his photographs—morning mists, dust storms and heavy rains, or rays of light shining through the clouds—and followed the animals on endless journeys along ancient trails, across dry lakes or raging rivers, documenting their never-ending fight for survival. He had his camera with him all the time, always hoping for the perfect blend of elements to come together in one image.
