The First Lie

This book is about one man's fight to turn the tide of low expectations. When Chris Sarra arrived as the first Aboriginal principal of Cherbourg State School in 1998, it was a time of high hopes but low expectations in Indigenous education. Over the next six years, he transformed the school into a national success story, but not without controversy along the way. From his childhood as the youngest in a large Italian-Aboriginal family, Chris was taught to be proud of who he was and where he came from. But he only began to understand that not every Aboriginal child grew up with this sense of worth when he started working as a teacher. He became determined to defy expectations of being Aboriginal and, in doing so, to change them for others. His role at Cherbourg finally gave him a chance to put his philosophy into practice. Along the way, he battled the media, the education system and a culture of complacency.

Breaking Financial Hardship

The Devil's Edge

The occurrences of both injury and death that take place on the job are a significant public health problem in the United States, causing a substantial human and economic burden. Traumatic Injury Research at NIOSH is the sixth report in the series Reviews of Research Programs of the National Institute for Occupational Safety and Health. The Committee to Evaluate the NIOSH Traumatic Injury Research Program found the program's research during 1996-2005 (the evaluation period for this review) relevant to reducing the burden of traumatic injury in the workplace and to have contributed to improvements in worker health and safety. To continue to reduce injuries and deaths to workers due to trauma, the committee recommended that the TI Research Program continue setting goals within the program's scope and resources; work with other federal agencies that support injury prevention and control research to outline areas of collaboration; embark on a program to increase the visibility of traumatic injury research; develop a strategic plan for evaluating its research-to-practice efforts and for building the capacity to carry out these efforts; and consider research on the safety impacts of changes in the nature of work as well as intervention research targeting organization policies and practices.
