The Games of War

Intelligence is a key element of operations, enabling commanders to successfully plan and conduct operations. It enables them to win decisive battles and it helps them to identify and attack high value targets. Intelligence is an important part of every military decision. Military intelligence is the knowledge of a possible or actual enemy or area of operation. It encompasses combat intelligence, strategic intelligence, and counterintelligence, and is essential to the preparation and execution of military policies, plans, and operations. The objective of military intelligence is to minimize the uncertainties of the affects of enemy, weather and terrain on operations. The decisive factor in warfare has often been the utilization of good intelligence. A glimpse of how this has been done in the Canadian Forces is contained in this reference book on the Intelligence Branch history.

Like treasured family heirlooms, the historic churches and temples of Tampa are lovingly cared for by their devoted congregations. With more than 200 vintage images, Historic Tampa Churches shares stories of tragedy and triumph, from St. Peter Claver Church, whose congregation watched the first church burn to the ground 10 days after its dedication, to the Sisters of St. Joseph at St. Benedict School, who found themselves jailed for teaching students in the African American community. Many of these churches, like Ybor City's Our Lady of Perpetual Help Church, West Tampa's St. Joseph Church, and downtown's Greater Bethel Baptist Church, are found at the center of Tampa's ethnically diverse communities. Passed down from generation to generation, these architectural gems serve as a reminder of the countless men and women who selflessly labored for the growth of their churches, leaving a lasting legacy of faith and good works.

A unbelievably, ridiculously, painfully, delightfully true sailing, land and love adventure in Mexico. Imagine Jimmy Buffett as the first mate, Dr. Wayne Dyer as the cook, Ernest Hemingway the helmsman and Jack London as the navigator and you get a pretty good idea about the crew in the author's head who helped shape this adventure. And they all get their share of the story. David owned and operated a real estate brokerage for many years in Northern California. Learning to sail on San Francisco Bay and visiting Mexico he soon discovered it was a combination he could not resist. During a visit to Mazatlan he determined he would chuck his brokerage life in California, bring a sail boat to that beach town and try his hand at the charter business. Sacrificing home and hearth and "security" at the altar of a mid-life Mexican dream cost him his business and marriage. Undeterred, he found a vintage ketch, made it ready for the ocean, and cast off. Come join the odyssey of sailing to Mazatlan -- dealing with Mexican "partners" negotiating tourist ladies,

Though still adjusting to the end of the Cold War, the defense industry is now confronted with the prospect of military transformation. Since the terrorist attacks on 11 September 2001, many firms have seen business improve in response to the subsequent large increase in the defense budget. But in the longer run, the defense sector's military customers intend to reinvent themselves for a future that may require the acquisition of unfamiliar weapons and support systems. Joint and service visions of the military after next raise serious questions that require the attention of the Defense Department's civilian and uniformed leadership and industry executives alike: What are the defense industrial implications of military transformation? Will military transformation lead to major changes in the composition of the defense industrial base? This study employs network-centric warfare, a Navy transformation vision that is being adopted increasingly in the joint world as a vehicle for exploring the defense industrial implications of military transformation. We focus on three defense industrial sectors: shipbuilding, unmanned vehicles, and systems integration. The transformation to NCW will require both sustaining and disruptive innovation—that is, innovation that improves performance measured by existing standards and innovation that defines new quality metrics for defense systems. The dominant type of innovation needed to support transformation varies across industrial sectors; some sectors face more sustaining than disruptive innovation, while some sectors will need more disruptive than sustaining innovation as they supply systems for the “Navy after Next.” Military transformation does not entail wholesale defense industrial transformation. In the systems integrations sector, much of the innovation required to effect networkcentric warfare is likely to be sustaining rather than disruptive. In the parts of the defense industrial base that build platforms, on the other hand, the standards by which proposals are evaluated for the Navy after Next will be somewhat different than the standards used in the past. As a result, transformation could significantly change the industrial landscape of shipbuilding. The unmanned-vehicle sector falls somewhere in between; because unmanned vehicles have not been acquired in quantity in the past, their performance metrics are not well established. Existing suppliers of unmanned vehicles will have a role in the future industry, but some innovative concepts and technologies may come from nontraditional suppliers, such as start-up firms. The U.S. Navy bears the responsibility of transforming itself. Internally, it must find ways to deconflict the needs of the current Navy and the “Next Navy” from the needs of the Navy after Next if industry is to support its long-term transformation requirements. Externally, pervasive organizational and political obstacles to transformation require that the Navy carefully manage its relationships with Congress and industry. Recognition that military transformation need not drive existing defense firms out of business will facilitate that task.

Considered one of most influential U. S. military officers of the twentieth century, William E. DePuy (1919--1992) developed the education and training program that

regenerated the U.S. Army after the Vietnam War. Henry G. Gole draws from sources such as transcripts and letters in DePuy's personal papers, interviews with those who knew him best, and secondary literature to trace DePuy's life from child to decorated officer to commander of Training and Doctrine Command. General William E. DePuy: Preparing the Army for Modern War is the first book-length biography of the important figure who revolutionized military training and created a modern program for doctrine, education, and combat development that is still used today.

What you eat and drink can affect the way your medicines work. Use this guide to alert you to possible "food-drug interactions" and to help you learn what you can do to prevent them. In this guide, a food-drug interaction is a change in how a medicine works caused by food, caffeine, or alcohol. A food-drug interaction can: prevent a medicine from working the way it should cause a side effect from a medicine to get worse or better cause a new side effect A medicine can also change the way your body uses a food. Any of these changes can be harmful. This guide covers interactions between some common prescription and over-the-counter medicines and food, caffeine, and alcohol. These interactions come from medicine labels that FDA has approved. This guide uses the generic names of medicines, never brand names.

This volume is the result of the many years the authors have spent conducting ethnographic field research with sex workers, conversing with other researchers, and, perhaps most importantly, developing a deep sense of empathy for the sex worker participants in the research as well as the colleagues who carry out this work with the goal of advancing social justice. They have a combined total of twenty-five years' experience carrying out research with sex workers, and this extensive period of time has given them ample opportunity to reflect upon the topic of ethics. Sex work, defined as the exchange of sexual or sexualized intimacy for money or something of value, encompasses a wide range of legal and illegal behaviors that present researchers with key ethical challenges explored in the volume. These ethical challenges include: · Research methodology · Distinguishing research from activism · Navigating the politically and ideologically charged environments in which researchers must remain constantly attuned to the legal

and public policy implications of their work · Possibilities for participatory sex work research processes · Strategies for incorporating participants in a variety of collaborative ways Sex work presents a unique set of challenges that are not always well understood by those working outside of anthropology and disciplines closely related to it. This book serves an important function by honestly and openly reviewing strategies for overcoming these ethical challenges with the end goal of producing path-breaking research that actively incorporates the perspectives of research participants on their own terms. Ever attuned to the reality that research on sex work remains a deeply political act, *Ethical Research with Sex Workers: Anthropological Approaches* aspires to begin a dialogue about the meanings and practices ascribed to ethics in a fraught environment. Drawing upon a review of published scholarly and activist work on the subject, as well as on interviews with researchers, social service providers, and sex workers themselves, this volume is an unprecedented contribution to the literature that will engage researchers across a variety of disciplines, such as academics and researchers in anthropology, sociology, criminal justice, and public health, as well as activists and policymakers.

Major Hal Skaarup has woven together an informative and detailed synopsis of the carefully preserved and restored armoured fighting vehicles on display in Canada. He highlights the importance of these upon key turning points in history when these AFVs were in use as tools of war at home and overseas. We often associate the evolution of military prowess with the advancement of sophisticated technology. Major Skaarup's descriptions of Canadian armour as it evolved to the level it has today reveals that military planners have had to be continuously creative in adapting to the changes in modern combat. They had to devise many intricate techniques, tactics and procedures to overcome the insurgents and opposition forces faced in Afghanistan and future overseas missions where Canadian armour will be brought into play. This guide book will show the interested reader where to find examples of the historical armour preserved in Canada, and perhaps serve as a window on how Canada's military contribution to safety and security in the world has evolved.

Everybody has the dream: Build a boat in the backyard and sail off to join the happy campers off Pogo Pogo, right? But how? Assuming you aren't independently wealthy, if you want a boat that's really you, you gotta build it yourself. Backyard boatbuilding has its problems. Building in fiberglass is itchy, smelly, and yields a product that yachting maven L. Francis Herreshoff once called "frozen snot." Ferrocement, once all the rage, has pretty much sunk from favor, if you catch the drift. But there's still wood, right? Ah, wood. Nature's perfect material. You can build in the time-honored traditions of the Golden Age of Yachting, loving crafting intricate joints in rare tropical hardwoods, steaming swamp oak butts to sinuous shapes, holding the whole thing together with nonferrous fastenings that cost a buck or better each. Does that sound like boatbuilding for everyone? What about the currently fashionable wood/epoxy boatbuilding? You butter regular old wood with Miracle Whip, stick it together in the shape of a boat, and off you go, right? Epoxy works, but They don't exactly give it away; nor is it exactly a benign

substance. Suiting up like Homer Simpson heading for a fun-filled day at the nuclear power plant isn't exactly the aesthetic boatbuilding experience many of us are looking for. Where does that leave us? In the capable hands of George Buehler, who honors the timeless traditions of the sea all right, but those from the other side of the boatyard tracks. Buehler draws his inspiration from centuries of workboat construction, where semiskilled fishermen built rugged, economical boats from everyday materials in their own backyards, and went to sea in them in all kinds of weather, not just when it was pleasant. Buehler's boats sail on every ocean and perform every task, from long-term liveaboards in Norwegian fjords to a traveling doctor's office in Alaska. This book contains complete plans for seven cruising boats--from a 28-foot sailboat to a 55-foot power cruiser. All the information you need is here, including step-by-step instructions honed by nearly 20 years of supplying boat plans to backyard builders--and helping them out when they get into trouble. Buehler is anarchic, heretical, and occasionally profane; his book is West Coast counterculture meets traditional hardchine workboat construction, leavened with hardnosed common sense and penny-pinching economy. This book is for those who look around them and see that much of what is done in the world today--whether in yachting or politics or economics or interpersonal relationships--is based not on logic but on conforming and meeting other people's expectations. This book is most definitely NOT about either. It is about the realization of dreams. If you believe that everyone who wants a cruising boat can have one . . . If you see beauty beneath the fish scales and work scars of a commercial fishing boat . . . If you want to build a simple, rugged, economical, good-looking cruising boat--power or sail--using everyday lumberyard materials and few skills other than perseverance, this is the book for you. Buehler's Backyard Boatbuilding tells you how to build extraordinary boats using the most ordinary skills and materials, with complete plans, instructions, and specifications for seven real cruising boats ranging from a 28-foot sailboat to a 55-foot power cruiser. "Build wooden boats the Buehler way, which is to say inexpensively, yet like the proverbial brick outhouse."--WoodenBoat Richly flavored with personal advice and anecdotes as well as a wealth of valuable information."--American Sailing Association "Everyone will revere this book."--The Ensign

"Shell Drake" is an informative and detailed synopsis of the carefully preserved and restored guns and artillery on display in Canada. The Royal Regiment of Canadian Artillery is represented by a long and distinguished line of gunners with historical ties back to the days before Canada's Confederation. The honour of defending Canada while standing ready to support operations overseas in peace and war continues to this day. In doing so, it is necessary to remember that the weapons of

war are an integral part of what keeps this nation safe, although the examples that have been used to make it so are few and far between. The descriptions of Canadian artillery and the places of honour where they can be viewed highlights the importance of the equipment that brought our nation forward at key turning points in history when our guns were in use as tools of war at home and overseas.
