Construction Planning Programming and Control

The management of construction projects is a wide ranging and challenging discipline in an increasingly international industry, facing continual challenges and demands for improvements in safety, in quality and cost control, and in the avoidance of contractual disputes. Construction Management grew out of a Leonardo da Vinci project to develop a series of Common Learning Outcomes for European Managers in Construction. Financed by the European Union, the project aimed to develop a library of basic materials for developing construction management skills for use in a pan-European context. Focused exclusively on the management of the construction phase of a building project from the contractor's point of view, Construction Management covers the complete range of topics of which mastery is required by the construction management professional for the effective delivery of new construction projects. With the continued internationalisation of the construction industry, Construction Management will be required reading for undergraduate and postgraduate students across Europe.

Project Scheduling and Management for Construction

This book adopts a methodical approach to the process of planning and control

exercised by the contractor during the pre-tender, pre-contract and construction phases of projects through the application of various planning techniques to a number of case studies in both building and civil engineering. To develop a fundamental understanding of the factors which influence the successful management of time on projects, the book explores the implications of new forces that are changing the way the construction industry operates, including the 'Latham' culture and new health and safety legislation such as the Construction (Design and Management) Regulations. A number of planning applications are explained, including linked bar charts, networks and precedence diagrams, together with techniques used for repetitive projects, such as line of balance and time-chainage diagrams. The text also incorporates examples of contract budgetary control and cost-value reconciliation procedures.

Project Scheduling and Cost Control

More than 80 percent of all projects start with underestimated schedules and costs, and are doomed to exceed projections. This concise book demonstrates how to establish realistic estimates, how to control a projects schedule and costs, and how to develop the projects plan and processes for successful project completion.

Project Management, Planning and Control

Critical Path Method (CPM) and Performance Evaluation and Review Technique (PERT) are widely recognized as the most effective methods of keeping large, complex construction projects on schedule, under budget, and up to professional standards. But these methods remain underused because they are poorly understood and, due to a host of unfamiliar terms and applications, may seem more complicated than they really are. This encyclopedia brings together, in one comprehensive volume, all terms, definitions, and applications related to the time and cost management of construction projects. While many of these terms refer to ancient and venerable building practices, others have evolved quite recently and refer specifically to modern construction and management techniques. Sources include hundreds of professional books, trade journals, and research publications, as well as planning and scheduling software vendor literature. The detailed glossary of all applicable terms includes a cross-referenced listing of examples that describe real-world applications for each term supplied. An extensive bibliography covers all applicable books, articles, and periodicals available on project planning, scheduling, and control using CPM and related subjects. This book is an important quick reference and desktop information resource for construction planners, schedulers, and controllers, as well as civil engineers and project managers. It is also the ultimate research tool for educators, students, or anyone who seeks to improve their understanding of the management of modern construction projects.
