The second revised edition of Governance in India by Laxmikanth is focused exam-centric book for aspirants of the Civil Services and other similar competitive examinations. However, the nature of the topic and the contents will be extremely relevant and useful for those interested in understanding the evolving dynamics of the system of governance in the country. In his inimitable style which is hallmark of Laxmikanth's books, the author clearly identifies the topics of the subject and presents them in his familiar reader friendly format. It is also worth mentioning that these topics do not overlap with his Indian Polity book

### **Persisting Undernutrition in India**

Document from the year 2015 in the subject Law - Miscellaneous, , language: English, abstract: This book explores the international conventions and covenants which accord rights to women. The situation of crime in India in the year 2014 is analysed. The laws framed to protect and empower the women are highlighted. Also the various schemes framed for the betterment of women have been brought out. Women have been discriminated and dominated since ages by the men who possess a mere excess of physical strength over their counterparts. To some extent the decrease in morals, ethics and cultural values have lead to the increased crime against women. Educating the masses would be a first step for the Government. To address this situation the global community has come forward and accorded diverse rights to women. These rights are bestowed through various international instruments as well as legislations at the national level. This book chalks out those international conventions and covenants which not only grant women special rights but also protects them from discrimination, violence and sexual harassment.

Acute diarrheal diseases (ADD) are important causes of morbidity and mortality worldwide. ADD includes, among others, cholera, shigellosis, and rotavirus diarrhea. These diseases are known to cause sporadic epidemics. Cholera and shigellosis are known to even cause pandemics. The treatments of these two diseases have been simplified with the advent of oral rehydration therapy and effective antibiotics. However, development of drug resistance poses tremendous

therapeutic challenges. This book includes chapters on new methods of classification of dehydration and this information will provide a better classification method of dehydration. Epilepsy and its association with acute diarrhea is a new area for research. Prevention of acute diarrhea in school children and treatment with herbal medicines are important areas to pursue further. The readers will find herein new concepts in diarrheal disease research and management.

### **India**

This book provides a comprehensive overview of child abuse and neglect globally in general terms and with empirical evidence from Puducherry, India. The study unearths the reality concerning child safety and raises a number of questions about child safety measures at the institutional and family levels. It recommends evidence-based and culture-specific preventive measures for child protection. The empirical evidence presented here provides important and useful information to school administrators on the issues of child abuse and neglect, for them to take evidence-based protective measures both at school and at home. For cross-cultural comparison, the findings are of interest to international scholars and academics. This work is useful for policy makers, educators, NGO personnel, child rights activists and opinion leaders in government departments dealing with children, and for researchers in the fields of psychology, social work, nursing, pediatric, forensic medicine, and public health.

### **India, a Reference Annual**

The book revisits the causes of persisting under nutrition in India, but moves away from the usual focus on women and children to a broader view of the entire population. It estimates the economic losses resulting from ignoring under nutrition in the adult working population and questions the current narrow focus of nutrition interventions, suggesting that a family-based approach may provide quicker results and long-term sustainability. It compares the best and worst performing states in the country to glean learnings from both successes and failures and emphasizes the need to hand over the ownership of nutrition outcomes from the state to the community and family for more sustainable results. The book is organized in three sections: Part 1 details the nutrition status of the population, regional variations in nutrition outcomes and government response in terms of interventions. Part 2 reviews issues and concerns like gender discrimination, poor child nutrition status, ineffective implementation of government programmes in the field and the possible impacts of emerging issues like climate change. Part 3

seeks solutions from both international and country experiences.
