Introduction. THERE is a passage in the Leviathan of Hobbes, which I will set before the reader, not without a definite purpose, as a sort of Introit to my Preface. It is, as follows: 'There is yet another fault in the discourses of some men; which may also be numbered amongst the sorts of madness; namely, that abuse of words, whereof I have spoken before in the fifth chapter, by the name of absurdity. And that is, when men speak such words, as put together, have in them no signification at all; but are fallen upon by some, through misunderstanding of the words they have received, and repeat by rote; by others from intention to deceive by obscurity. And this is incident to none but those, that converse in questions of matters incomprehensible, as the School-men; or in questions of abstruse

philosophy. The common sort of men seldom speak insignificantly, and are, therefore, by those other egregious persons counted idiots. But to be assured their words are without anything correspondent to them in the mind, there would need some examples; which if any man require, let him take a School-man in his hands and see if he can translate any one chapter concerning any difficult point, as the Trinity; the Deity; the nature of Christ; transubstantiation; free-will, &c., into any of the modern tongues, so as to make the same intelligible; or into any tolerable Latin, such as they were acquainted withal, that lived when the Latin tongue was vulgar. What is the meaning of these words, The first cause does not necessarily inflow any thing into the second, by force of the essential subordination of the second causes, by which it may help it to work? They are the translation of the title of the sixth chapter of Suarez' first book, of the concourse, motion, and help, of God.(1) When men write whole volumes of such stuff are they not mad, or intend to make others so?(2) A German writer of great and deserved reputation shall take up the fuge. 'The soul of the Scholastic Philosophy, ' writes Brucker, 'and the hinge on which it all turned, was not an attentive inquiry after Truth, undertaken without prejudice and made up of connected truths deduced from concordant Principles; but the empty and ambitious affectation of a sort of subtlety that made show of great intellectual acumen. Furnished with dialectic and metaphysical weapons, it was wont to dispute, with extremest stretching of the brain, about questions most difficult indeed and acute, but commendable neither by reason of their utility nor of their certitude; and would come down into the area for the

purpose of carrying on its countless philosophical skirmishes, with the help of verbal disputes, of worthless mental abstractions, of axioms assumed at hazard, of distinctions destitute of the smallest foundation, and of the horrors of a barbarous terminology.'(3) A little further on, the same author deplores its 'obscure ideas, ' -- 'words without meaning, ' -- 'barbarous terms which had a sort of frightful sound from their very clatter;' and describes its teaching as the 'hobgoblins of boys, ' -- 'empty clouds, ' -- 'an immense ocean of verbal disputes.'(4)

This is a historically informed examination of architecture's perceived absence in surrealist thought, surrealist tendencies in the theories and projects of modern architecture, and the place of surrealist thought in contemporary design. This book represents current insights into surrealism in the thought and practice of modern architecture. In these essays, the role of the subconscious, the techniques of defamiliarization, aesthetic and social forces affecting the objects, interiors, cities and landscapes of the twentieth century are revealed. The book contains a diversity of voices from across modern art and architecture to bring into focus what is often overlooked in the histories of the modernist avant-garde. This collection examines the practices of writers, artists, architects, and urbanists with emphasis on a critique of the everyday world-view, offering alternative models of subjectivity, artistic effect, and the production of meanings in the built world.

2018 Reprint of 1961 Second Edition. Full facsimile of the original edition. Not reproduced with Optical Recognition software. As The New York Times wrote after his death, Henry B. Fried was "widely acknowledged as the dean of American watchmakers." In the revised, 1961 edition of his classic book The Watch Repairer's Manual, reprinted here, Fried addresses topics important to

contemporary watch repairers, such as self-winding watches, waterproofing, calendar watches, alarm wristwatches, and chronographs. The Watch Repairer's Manual also includes a fine visual dictionary of exploded views in isometric, which are very helpful for ordering watch parts. One of the few modern books available on the techniques of watch repair and certainly the most esteemed, The Watch Repairer's Manual is outstanding for its sequence of presentation and its many useful illustrations, including enlarged details of alarm and self-winding watches. The consummate craftsman and master of details, Fried himself created the illustrations. From teaching others, Fried has learned that if you have a good understanding of how and why the mechanisms work, you will become better at fixing any problems you face-often without needing to consult a book. The Watch Repairer's Manual provides:

- Helpful background material, such as full descriptions of the main divisions of the modern watch mechanisms, including the purpose and function of each unit.
- Complete directions for cleaning and overhauling a watch movement for casing.
- A section devoted to general repairs and troubleshooting.

For anyone interested in watch repair, this volume will serve as a working manual, a reference manual, and even a course of study. Assuming little previous knowledge on the part of the reader, Fried provides complete and clear detail on each operation. The Watch Repairer's Manual should be of great value to the student, hobbyist, watch collector, and instrument maker. Henry B. Fried wrote and illustrated 14 books, many pamphlets, and hundreds of articles on horology, the science of timepieces. The first American to receive the Silver Medal of the British

I am pleased to present a work which marks a milestone in the history of public works and, more precisely, in that of permanent structures—a comprehensive dictionary of Civil Engineering terms. Since the beginning of time, Man has always tried to find a means to clear the obstacles which nature erected to displace him.

With the first tree trunk thrown across a river, man sought to improve the crossing structure. After the invention of the wheel, and to satisfy his thirst for conquest (Roman ways), and comfort (aqueducts), man built bridges that became a preremptory necessity to move quickly. Thus, Man started to build wooden and masonry works. With the passing centuries, the builders became masters in the art of building masonry works. Then came the Industrial Revolution and the advent of the steel (1864), which was closely followed by the invention of the reinforced concrete (1855). The need for railways and improving the road network inspired great works of crossing such as viaducts and tunnels. The boom of the railway network and the development of the car required the construction of an increasing number of new structures. This phenomenon continues today with hundreds of structures built each year throughout the world.
