Statistics in Criminology and Criminal Justice: Analysis and Interpretation

Statistical analysis is critical in criminal justice. Professionals in the field must be diligent producers of research to assist policy makers in evaluating program and policy proposals. The key to understanding statistical analysis is by applying the concepts, methodology, and statistical procedures taught in the classroom. Written for undergraduates with little or no background in statistics, the third edition of *Statistical Analysis in Criminal Justice and Criminology* continues to focus on students' understanding of fundamental analysis. It is premised on active learning utilizing common statistical tools to analyze crime data, avoiding the comprehensive approach common to many statistics texts. Authors draw from longtime classroom experience to present complex theories in approachable ways. Exercises move from an initial step through the application of concepts explained in each chapter before insights on interpreting the results in a meaningful way is provided. New to this edition is the inclusion of both SPSS and Excel criminal justice data sets used to complete end-of-chapter exercises and analyses. This

Statistics in Criminal Justice

In *Understanding Crime Statistics*, Lynch and Addington draw on the work of leading experts on U.S. crime statistics to provide much-needed research on appropriate use of this data. Specifically, the contributors explore the issues surrounding divergence in the Uniform Crime Reports (UCR) and the National Crime Victimization Survey (NCVS), which have been the two major indicators of the level and of the change in level of crime in the United States for the past 30 years. This book examines recent changes in the UCR and the NCVS and assesses the effect these have had on divergence. By focusing on divergence, the authors encourage readers to think about how these data systems filter the reality of crime. *Understanding Crime Statistics* builds on this discussion of divergence to explain how the two data systems can be used as they were intended - in complementary rather than competitive ways.

Statistics in Criminology and Criminal Justice: Analysis and Interpretation

This book offers a comparative exploration of how journalists across different newsrooms around the world access and interpret statistics when producing stories related to crime. Looking at the nature of news sources regularly used by journalists, Lugo-Ocando analyses how these numbers are used to report crime. As the author argues, far from being straightforward, the relationship between numbers and journalists in the context of crime reporting is complex, and at times, problematic. Because the reporting of crime statistics impacts upon policymaking, we need to better understand how these statistics are used and reported in order to improve the process of decision. Finally, Lugo-Ocando maintains that the only way to create a fairer justice system and a better-informed general public is by improving the way crime is covered in the news. A compelling and informed text, this book will be of interest to scholars and students of criminology and journalism alike.

Modernizing Crime Statistics

Guns and Crime

To derive statistics about crime " to estimate its levels and trends, assess its costs to and impacts on society, and inform law enforcement approaches to prevent it - a conceptual framework for defining and thinking about crime is virtually a prerequisite. Developing and maintaining such a framework is no easy task, because the mechanics of crime are ever evolving and shifting: tied to shifts and development in technology, society, and legislation. Interest in understanding crime surged in the 1920s, which proved to be a pivotal decade for the collection of nationwide crime statistics. Now established as a permanent agency, the Census Bureau commissioned the drafting of a manual for preparing crime statistics"intended for use by the police, corrections departments, and courts alike. The new manual sought to solve a perennial problem by suggesting a standard taxonomy of crime. Shortly after the Census Bureau issued its manual, the International Association of Chiefs of Police in convention adopted a resolution to create a Committee on Uniform Crime Records "to begin the process of describing what a national system of data on crimes known to the police might look like. Report 1 performed a comprehensive reassessment of what is meant by crime in U.S. crime statistics and recommends a new classification of crime to organize measurement efforts. This second report examines methodological and implementation

Elementary Statistics in Criminal Justice Research

How to think about, conduct, and evaluate research is fundamental to the study and understanding of criminology and criminal justice. Students take methods, statistics, theory, and topic-specific classes, but they struggle to integrate what they learn and to see how it fits within the broader field of criminology and criminal justice research. This book directly tackles this problem by helping students to develop a 'researcher sensibility', and demonstrates how the 'nuts and bolts' of criminal justice research - including research design, theory, data, and analysis - are and can be combined. Relying on numerous real-world examples and illustrations, this book reveals how anyone can 'think like a researcher'. It reveals, too, why that ability is critical for being a savvy producer or consumer of criminological and criminal justice research.

Guns and Crime: The Data Don't Lie investigates the ways in which the current data on guns and crime are inadequate and inaccurate. Although the majority of murders in the United States are committed with guns, research on gun ownership, the supply of guns, and the relationship between guns and crime is less thorough than studies done for many other aspects of public safety policy. This book explores the weaknesses in current findings, and extrapolates the implications of policymaking based on these faulty foundations. As the gun debate continues to rage in North America, this text offers a cautionary voice to the discourse—before practitioners and policy makers can create a solution to gun violence, they must first

"The book aims to achieve two goals: introduce statistical ideas to a general audience and provide an overview of US crime statistics. These are disparate topics, but in the way they are approached here, there is a strong synergy that reinforces both aspects. On the one hand, the reader's natural curiosity about crime (what is it, how are crime events classified and reported, how reliable are the numbers you see in the newspaper, etc.) will help him/her become interested in the statistical issues and learn these concepts in a practical and concrete setting. And on the other hand, by reading about the statistical issues surrounding crime data, he/she gains a better appreciation for the complexities of crime statistics, eventually acquiring a deeper understanding of them. As a statistician myself, I learned interesting facts about the types of crime, their nomenclature and the possible confusion surrounding them, and how the data are collected and reported. Overall, I think the combination is effective and very well developed in this book." Most importantly, there are very good guidelines and questions that one should employ before citing any data or using data for policy decisions or for reporting on data such as journalists do. The book is written in a non-technical manner and does a very good job of explaining the nuances in reviewing data. Any researcher who utilizes data would find this valuable. Most major crime in this country emanates from two major data sources. The FBI's Uniform Crime Reports has collected information on crimes known to the police and arrests from local and state jurisdictions throughout the country. The National Crime Victimization Survey, a general population survey designed to cover the extent, nature, and consequences of criminal victimization, has been conducted annually since the early 1970s. In addition to comparing and contrasting the methodological issues associated with self-report surveys and official records, the workshop explored methods for obtaining accurate self-reports on sensitive questions about crime events, estimating crime and victimization in rural counties and townships and developing unbiased prevalence and incidence rates for rate events among population subgroups.
