Up-to-date information on enrollments, tuition and fees, academic programs, campus environment, available financial aid, and much more, combine to make 27th edition of Profiles of American Colleges America's most authoritative source for information on colleges and universities. College-bound students, parents, and high school guidance counselors will find information on more than 1,650 accredited four-year colleges across the United States. A CD-ROM enclosed with each copy of this comprehensive directory presents an interactive format and lets students find individual schools by entering specific criteria. In addition to the above-cited information, each college profile gives details on admission requirements, library and computer facilities, athletic facilities, extracurricular activities, e-mail addresses, fax numbers, web sites, and more. Schools are rated according to Barron's famous competitiveness scale, from "Noncompetitive" to "Most Competitive." The book's extra section of tinted pages presents a complete, quick-reference Index of College Majors—listing all available major study programs at each school. Also profiled are many of the best-known colleges in Canada and several other countries.

The leading veterinary histology text returns with a fully updated sixth edition. Written in a concise, easy-to-understand that's a pleasure to read, this new edition continues the student-friendly tradition originated by Dr. Dellman, presenting the basics of histology including cytology and microscopic anatomy. The Sixth Edition focuses on the most current knowledge of cell, tissue and organ structure and function. All information has been fully revised and updated by the authors, both experts in their fields. Written with first year veterinary students in mind, it is also an important resource for veterinarians, graduate students, and others who require information on animal tissue structure and function. Highlights of the Sixth Edition include: New images and line drawings have been added to enhance the student's understanding of concepts. Two-page insert contains full-color histology images. Comprehensive listings of suggested readings at the end of each chapter encourage further study. The text is organized by body region, allowing the presentation to emphasize comparative species information so students can better appreciate how species differ in regard to key structures. Whether you're a veterinary student or practicing professional, you should have this classic histology reference as part of your working library.

Hardbound. The objective of this conference was to: - provide a global overview of the present status of replacement alternatives, reduction alternatives and refinement alternatives; - review the progress that has been made with respect to their implementation within the fields of biomedical research, testing and education; - promote the exchange of information on recent developments in animal alternatives; and - contribute to an ongoing dialogue between the animal protection movement, the scientific community, the regulatory authorities and industry. These objectives were fully achieved, and the results have been published in this volume. The contents of this book provide an up-to-date overview of the various aspects dealing with the development, validation and use of animal alternatives. In addition, current topics on animal welfare and ethical aspects of animal experiments are covered

Canine Anatomy, A Systemic Study, 4e provides introductory anatomical information on the dog and cat for the first year veterinary student. Completely unique in the literature for its organization by system, this text guides students in the systemic dissection of non-embalmed canine carcasses. To achieve diversity in student dissection and to enhance learning, specific dissection instructions have been omitted. The author introduces directional and structural terminology gradually and sequentially. Anatomical terms introduced for the first time in the text, or emphasized in a particular chapter, are highlighted. Information on these words may include their singular and plural spellings, pronunciation and meaning. A unique and invaluable reference for students and faculty in class and in the lab, Canine Anatomy, A Systemic Study, 4e also includes an accompanying CD-ROM that:

wants to learn (or review) the normal radiographic anatomy of dogs. The program begins with an overview of basic radiology concepts, with explanations of x-rays and radiographs, radiographic densities, views and orientation of films, and artifacts. The rest of the program focuses on the identification of specific anatomic structures and offers three stages of learning: tutorial—various structures on a radiograph are highlighted as the user selects them from a list; review—the user is prompted to click on specific structures on the radiograph, which are then highlighted if correct; and quiz—the user must identify and type the correct name of various randomly generated structures as they appear highlighted on a radiograph. Each stage is organized by body region (head, neck, thorax, abdomen, thoracic limb, pelvic limb), so users can focus on specific areas to maximize their learning experience.
