"The Child's Play VW Polo" explains, step by step, with a picture for each, how to do the service of your VW Polo. It is based on the certainty that everyone can do it, if clearly explicated and shown. Because it is very simple. Make sure your Polo is from 2001 to 2009 and has an engine 1.4 TDI 51, 55 or 59 kw. These are the engines covered by this VW Polo service manual. It contains an accurate list of the tools you need, a detailed procedure to do your service, but also to check and replace your front brakes (pads and discs). You will see an example of the service book you should keep up to date, and the scheduled maintenance for all the tasks that have to be done to keep your car in the best conditions. The main goal is to save money. For each maintenance, it will cost you from 35e to 50e maximum, while it costs more than 200e at your car dealer. You save at least 150e per service. More than money, you save time here ! We assure you that after the first learning, you will not need more than 30 minutes! Better than go to the car dealer and wait for two hours. The Child's Play Maintenance manuals have the goal to

allow anyone to do its car service himself. We think that your mechanic charge far too much for what it is, and we want you to avoid this useless expense. Each manual is specific to a single model (location of the parts are different, as the way to replace them)

The light-duty vehicle fleet is expected to undergo substantial technological changes over the next several decades. New powertrain designs, alternative fuels, advanced materials and significant changes to the vehicle body are being driven by increasingly stringent fuel economy and greenhouse gas emission standards. By the end of the next decade, cars and light-duty trucks will be more fuel efficient, weigh less, emit less air pollutants, have more safety features, and will be more expensive to purchase relative to current vehicles. Though the gasoline-powered spark ignition engine will continue to be the dominant powertrain configuration even through 2030, such vehicles will be equipped with advanced technologies, materials, electronics and controls, and aerodynamics. And by 2030, the deployment of alternative methods to propel and fuel vehicles and alternative modes of transportation, including autonomous vehicles, will be well underway. What are these new technologies - how will they work, and will some technologies be more effective than others? Written to inform The United States Department of Transportation's National Highway Traffic Safety Administration (NHTSA) and Environmental Protection Agency (EPA) Corporate Average Fuel Economy (CAFE) and greenhouse gas (GHG) emission standards, this new report from the National Research Council is a technical evaluation of costs, benefits, and implementation issues of fuel reduction technologies for next-generation light-duty vehicles. Cost, Effectiveness, and Deployment of Fuel Economy Technologies for Light-Duty Vehicles estimates the cost, potential efficiency improvements, and barriers to commercial deployment of technologies that might be employed from 2020 to 2030. This report describes these promising technologies and makes recommendations for their inclusion on the list of technologies applicable for the

2017-2025 CAFE standards.

A thriving support structure of clubs, specialist magazines, and part suppliers ensure that the Golf, in all its forms, will remain popular with tuning enthusiasts for many years to come.
