This textbook is the first authoritative, in-depth publication about global midwifery and the contribution of skilled professional midwives to the provision of high quality maternity care, reductions in maternal and newborn mortality and morbidity. It demonstrates actions that are contributing to the achievement of the 2030 Sustainable Development Goals through partnership with women and their families, enabling them to 'survive, thrive and transform'. The textbook explores how the world is becoming more connected through globalisation, advances in technology and innovation and yet more inequitable as women and children are disproportionately affected by issues such as poverty, environmental vulnerability, hunger, conflict, violence, and discrimination. It considers how midwives contribute to maternal and newborn health, leading to greater equity and empowerment and, ultimately, strengthening health systems. The 'three pillars' of midwifery are discussed: regulation, education and professional midwives' associations. The importance of evidence-based care is explored along with different models of midwifery and the challenges of developing professional leadership. This textbook also considers women's human rights to sexual and reproductive health and respectful maternity care, stressing the importance of cultural sensitivity and contextually appropriate approaches. Midwives and other professionals will benefit from this reliable resource that indicates direction and provides information about the principles and practice of professional midwifery. This text also provides universities, organisations, and individuals with a highly relevant resource to better equip them for international midwifery practice. It finally offers policy makers a reliable source of evidence-based information for consideration in various evolving national and international situations.
